We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Extra fine specimens..... 10-inch, \$5.00; 12-inch, \$7.50

NEPHROLEPIS:		Each
Dwarf Boston, 6-inch.....		\$0.75

FAITH IN THE CAMPAIGN WORK.

M. W. Farr, Reading, Mass., writes: "Enclosed find \$10 for one year's contribution to the advertising fund. I think this is a great thing for we florists, and all should contribute, as it will doubtless be returned many times over."

If all the florists would but have the same faith in our work as Mr. Farr has, we could reach our goal. Too many florists are predisposed to argue with themselves in a parsimonious way. "Business is good," say they, "Why should we pay to keep it so, when there are others who gladly contribute? They must help us if they help themselves, therefore we need not worry." This is not the true American feeling. Such a thought is evidence of disloyalty—disloyalty to the industry which makes a good living possible.

The Publicity Campaign was inaugurated to benefit the whole trade, not any particular part of it. The splendid results from it have proved this. That the demand for flowers has increased through it is no longer questioned. Not a day passes when the Secretary does not receive at least one letter asking how flowers can be delivered at some distant point, and every such letter is traceable to our national advertising. This is only a small instance of the good accomplished, but large enough to assure us that the advertisements are being read. We know for a certainty that our slogan is working as we desired it should. Ask any florist whose daily business includes much of the transient variety how many of his customers refer to it. Look around you and notice how often paragraphs in the public press refer to it. Even the state has taken it up. A once popular whisky slogan got similar publicity sufficient to insure an enormous sale of the product, but its publicity cost millions where ours is costing mere thousands. Again, if our campaign had done nothing more than stimulate florists to direct a little publicity for themselves, our efforts and expense would not have been wasted.

Then why should a man hold aloof from the movement from a parsimonious standpoint? He is, to quote an old saying, "Skinning a flint for a half-penny and spoiling a six-penny knife

over it." Just so long as he holds out will the full measure of benefit from the campaign be delayed. Now don't be a skinflint, because it is easy to be one. If our noble army of subscribers had been skinflints, the florist business would not be what it is today, prosperous, and to be made more so when our fund increases.

What our committee needs now is more money to work upon. We are faced at this time with the problem of providing for our fall advertising, which includes Thanksgiving and the Christmas holiday advertising, contracts for which must be placed months ahead of the dates of issue. There is also much advertising for ordinary every day business to be provided. It was surely noticed how well floral gifts showed up in the Christmas trade of last year. Help to make it twice as good this year—it can be done through judicious advertising.

Why not give your support now, when the committee so greatly needs it? Send your cheque to the Secretary right away—and don't worry as to the amount; whatever you give will be gratefully appreciated.

JOHN YOUNG, Sec.

THE NATIONAL ROSE GARDEN PILGRIMAGE.

The summer meeting of the American Rose Society will be held in Washington, D. C., June 2, 1920. All visitors are expected to register at Mr. Gude's store on F Street between 9 and 10 A.M. Promptly at 10 o'clock the party will proceed by auto to the Department of Agriculture to pick up any others who may have registered at the Department Main Building. The party will then proceed to the garden for an inspection, two hours being allowed for this. There will be no speeches at the garden, these being reserved for the banquet which will follow later. At 12 o'clock the party will be taken to Twin Oaks where as in former years an enjoyable time will be spent, two hours being allowed. The banquet will follow and at this function certain prominent members will uphold the oratorical traditions of the society. The report of the judges will be presented at the banquet.

At 4 o'clock the party will be conducted to the site of the Show Garden, the same to be dedicated with appropriate speeches. Those in charge have prepared a program well provided with entertainment and it behooves the members of the American Rose Society to encourage those in charge of our National Rose Garden by attending the

BOX-BARBERRY

Have you seen a garden bordered with BOX-BARBERRY this spring? Every plant bright and green,—not a dead one. A strong contrast to the northern Buxus bordered garden, now either dead or sadly winter injured, brown and dejected looking.

Mr. Siebrecht, the veteran plantsman, on seeing the garden the other day shown in accompanying illustration, exclaimed with his characteristic enthusiasm, "magnificent, there is a fortune in it for the nurserymen."

We offer you well rooted dormant summer frame cuttings ready to set out direct into the nursery without further expense to you at

\$65.00 per 1000

ALL SOLD OUT OF LARGER SIZES

Many of the leading catalogue firms have already contracted with us for their supply for the ensuing season, and others are buying these FRAME GROWN PLANTS for their own planting preparing for the enormous demand which is sure to follow.

It is a safe statement that BOX-BARBERRY will soon be the plantsman's best seller.

THE MARKET.

Ever since Mothers' Day the market has been in the buyers' hands. This seems to be the report from all over the country. In some instances business has stiffened up early this week, but there has been a falling off again. The reports from Philadelphia say that some items there, notably sweet peas, are the best that have ever been seen at this season of the year.

Advance bookings for Memorial Day are now in order and there seems to be every reason to expect a lively business. Peonies from nearby points will be scarce, however, on account of cool weather, unless next week proves to be unusually warmer. None of the markets are short and late reports from New York, Buffalo and other cities show a downward tendency as in Boston.

Roses are plentiful and cheap in New York, being quoted at from \$2 to \$15 per 100, while the Pittsburgh market is considerably stiffer. Carnations are also low in New York, but Pittsburgh is quoting at \$8 per 100. In Boston they are from \$4 to \$6, which is also the Buffalo quotation. Callas run from \$6 to \$15 in different markets according to quality, and other lilies are about the same. The quotation for lilies is varied of course, in different markets, but these prices hold true in New York. Sweet peas are selling readily at from 50c. to \$2 and are of good quality. Snapdragon brings between 50c. and 75c. per bunch. Marguerites range from \$1 to \$4. Tulips seem to be unusually scarce and there have been almost none at all in Pittsburgh; in Boston they are fairly plentiful at from 2 to 4c. Baskets of pansies are selling at \$3 per dozen. Plenty of outdoor lilacs are showing up in New York.

SHOW LARGELY ATTENDED.

Six Thousand People See Orchids and Other Flowers in Boston.

There was a record breaking attendance at the flower show at Horticultural Hall, Boston, last Saturday and Sunday. Over four thousand people visited the Hall, Sunday afternoon, and nearly two thousand on Saturday afternoon. Probably a majority of these people came to see the orchid exhibit staged by Mr. Albert C. Burrage, of Beverly. This display was well worth going to see, including as it did a hundred exotic plants of different species, in addition to a special group of fifty hybrid Odontoglossum and Odontioda orchids. The blooms of the Odontoglossums while small were exceedingly lovely in their wide range of delicate colors and excited great admiration. It had been said in the past that such a display could not be made in this country, but Mr. Burrage has proven the falsity of such a statement.

Next to the orchids an exhibit of Calceolarias from the Arthur Lyman estate in Waltham was viewed with greatest interest. This exhibit under the direction of George F. Stewart, the gardener, included some of the most magnificent Calceolaria specimens ever seen in the hall.

George F. Buxon, of Nashua, the well known florist, exhibited three plants of a new geranium, Mrs. Buxon, which is very promising. Besides the flowers there was a good display of vegetables.

The list of prizes and gratuities awarded is as follows:

Hillcrest Prizes

Flowers.

Narcissi—Twelve vases, twelve scapes in a vase, not less than six varieties: 1st, Edward A. Clark; 2d, Faulkner

Farm. Tulips—Darwin, twelve vases, six blooms in a vase, not less than six varieties; 1st, Edward A. Clark. Best collection of Tulips; 1st, Edward A. Clark.

Gratuities—J. T. Butterworth, display of Orchids in baskets; Arthur Lyman, Calceolaria Stewartii in variety; Miss Cornelia Warren, Pelargoniums and Amaryllis.

Gold Medals—Albert C. Burrage, collection of Odontoglossums and Odontiodas.

Silver Medal—George F. Stewart, Calceolaria Stewartii Lymani.

Cultural Certificate—Douglas Eccleston, Coelogyne Pandurata; Douglas Eccleston, Coelogyne Dayana.

Honorable Mention—George E. Buxton, new geranium, Mrs. George E. Buxton; Hillcrest Farm, for cultivation of herbaceous plants in pots.

HILLCREST PRIZES.

Vegetables.

Asparagus—Twenty-four stalks, not bunched; 1st, Oliver Ames, Giant Argenteuil; 2d, Edward A. Clark, Canover's Colossal; 3d, Hillcrest Farm, Reading Giant. Cauliflower—Three heads: 1st, Edward A. Clark; 2d, Oliver Ames; 3d, Hillcrest Farm. Rhubarb—Twelve stalks: 1st, Oliver Ames, Linnaeus; 2d, Edward A. Clark, Linnaeus; 3d, Oliver Ames, Victoria.

Honorable Mention—Hillcrest Farm, Udo (Aralia cordata).

THE TALK OF THE TRADE

Flowering plants for late fall and winter will again be good property the coming season and it is time now to lay your plans. *Primula obconica* is always a good seller, and barring the fact that it is poisonous in some cases, it is an all around satisfactory plant. There are, however, some florists who will not handle *Primula obconica* at all, and it is a question in my mind if they are not justified. I have known of several severe cases of obconica poisoning, and in more than one instance the florist found himself in quite serious trouble with his customers. Well grown obconica, however, is a very pretty plant and the storeman who handles them finds a ready sale and feels reasonably sure that he is turning out a plant that will be satisfactory in the house. If you are going to grow this crop and haven't started the seed up to this time, you should do so at once.

Cineraria is another plant which always gives satisfaction if grown cool enough, and for early plants, seed may be sown now. It will be wise to follow along in spells of two to three week intervals with successive sowings, but above all when finishing this crop, use tobacco freely so that it will go into the hands of your customer absolutely free from aphids. It is a very unsatisfactory plant unless turned out clear of this pest.

This also applies to *Calceolaria*. This plant is not so easily grown as the cineraria or the primula, flowers much later, and in fact I believe the best results are obtained from late sown seed. Until the nights become a little cool around the first of August, it is a pretty hard job to handle the small seedlings without losing a big percentage from damping off. The calceolaria is by no means an easy plant to grow, as it takes very careful watching from the time the seeds are sown until they are finished, but they are well worth the trouble and will bring a price that is proportionate.

Of course in mentioning winter-flowering plants, we must not forget *Primula chinensis*. There is plenty of time to start these yet, and unless you

want extra large plants, I believe later sowing will do every bit as well. Four and five inch pot plants are desirable sizes and find a more ready sale.

I saw a ground bed of Peonies being forced at Harold Ryan's Greenhouses, opposite Mt. Auburn Cemetery, Cambridge, and while this may be a more or less common practice, it is the first time that I ever saw it done. It appeals to me, however, as a crop that can be made profitable. He had a fine, heavy set of buds, and these blooms should bring quite a fair price, coming in as they will before the outside crop. I am not ready to vouch for what the profit will be from this crop, but I can't help thinking it will be well worthy of a trial.

It is doubtful if there ever has been a time in the history of our business when so much trouble has been caused by delayed shipments, not only express but parcel post as well, and I think that every shipper of plants and flowers is having about all the trouble that he can handle. A great deal of this delay can probably be laid to the fact that there is such an accumulation of stock held over from the time of the express strike, but it is also a fact that freight and express matter is so heavy that the railroads are not equipped and are not keeping up with their increase of business. Speaking for the shipper who has a lot of stock to move and wants to get the stock out in good

time, I want the buyer to stop and think for a minute, and if your stock does not come to you as promptly as you expected, it may be the fault of the express company and not the firm from whom you bought. I know of one grower who packed a lot of plants for shipment to Cleveland. Part of the shipment went out in the evening, part of it not being finished in time was held over to go the next morning. When that stock was taken to the express office, the grower was informed that the embargo was on again. That particular lot of plants had been held up for nearly two weeks awaiting an opportunity of shipment. The crates were delivered to the express office, the express company refused to take them, and they were returned to the greenhouses and stock unpacked. Another attempt was made to send out, and after waiting a number of days and switched back and forth with the information that the stock could go the plants were finally sent out. All the time, the customer on the other end was getting more impatient, and neither the buyer or shipper was to blame.

Would advise any grower shipping now to ship in open crates. Don't pack solid as there is danger of the stock being on the road so long that it will become heated in transit, and that would mean a ruined lot of plants.

There seems to be good prospects of a generous supply of feverfew, stocks, candytuft and gladioli for Memorial Day. Let us hope that it will materialize. From what I have been able to observe

Crotons in 4-inch Pots

in various parts of the East, the benches are pretty well planted with stock that promises to be in good time for that season. I believe the flower market will be generously supplied with cut flowers of all kinds and that should mean for everyone a fine, big Memorial Day business.

While Crotons are considered mainly in the line of a holiday and winter plant, we are now coming to the season when they can be used very nicely in another way, and that is in porch boxes in shady locations, mixed in with ferns and other plants of a like nature. Hotels, clubs and private residences at the various summer resorts furnish ample opportunities for the use of boxes of this character, and good croton stock in medium sizes suitable for box work is in fairly good supply. The narrow leaved types, such as Florence, Golden Thread and Delicatissima are especially fine for jardiniere and table work and with them a number of the Dracaenas can be used, such as terminalis, Kelleriana and Lindenii.

I have been interested to note that for the first time the Copley-Plaza Hotel in Boston has filled its window boxes with flowering plants. The effect is remarkably good, and has brought many favorable comments. The work was done by Hoffman, who used 800 Poitevine Geraniums and 450 Vincas. The very simplicity of the decorations add to their charm. In the fall the boxes are again to be filled with boxwood, of which Mr. Hoffman has just purchased a supply. The use of window boxes is constantly growing in favor and filling them is a line of work which florists can take up with profit.

Pachysandra terminalis

2 year old plants,

3 year old plants

\$12.00 per 100, \$100.00 per 1000

JAMES WHEELER

NATICK, MASS.

Memorial Day business in Boston promises to be the biggest in the history of the city. This is especially true as regards artificial goods, wreaths and prepared stock of all kinds. Mr. Charles Robinson, of the Henry Robinson Co., told me a few days ago that he had been obliged to cancel all advertising and call in some of his salesmen, because the company had all the orders it could possibly fill. Moreover, the price has constantly been going up, so that if he had the goods now which he sold two weeks ago he could make a great deal more money on them. Mr. Robinson said that apparently the matter of price did not have any effect on the trade. The whole question was that of getting goods enough to go around.

In most parts of the country Mothers' Day was a distinct success, judging from the different people with whom I talked. Samuel Murray, of Kansas City, says that Mothers' Day business there demonstrated the fact that the day is now too well established to be hurt by knocks of the nature appearing in some of the papers. He says that the demand for plants and cut flowers was about equal with him, and that he had a great many fine Gloxinias which sold well. Owing to a severe hailstorm just before Mothers' Day, most of the carnation growers near Kansas City had their stock ruined with the result that there was a big shortage of carnations in the market. Flowers sold for \$4.00 per dozen. Mr. Murray himself sold none out of the store, holding his stock to take care of his F. T. D. orders, but he could have moved a great quantity of them had he had them, as the demand was strong. Mr. Murray feels particularly good over the prompt and liberal support given by the florists of the city towards an advertising campaign which was started for Mothers' Day. For the first time all the Kansas City florists cooperated on their advertising, this being due in great measure to the efforts of Miss Hayden, one of the enterprising young ladies in the Murray establishment. About \$900 was raised, and was used in the local papers. No doubt it was due in large measure to this publicity that a marked increase of business was observed. Mr. Murray says that he is able to report an increase of 40 per cent on sales. On the F. T. D. business there was an increase of 70 per cent.

The widespread utility of the F. T. D. development is illustrated by the fact that one order was sent to Aberavon, Wales, a suburb of Cardiff.

Worth While Primulas

Malacoides Rohrerii. The best strain of Malacoides on the market. Years of patience have developed it to perfection. PLANS FOR THE DAHLIA SHOW.

A meeting of the Executive Committee of the American Dahlia Society was held at the Grand Hotel, New York, on Monday afternoon, May 10, 1920.

A prize schedule for the fall Flower Show was partially prepared to be completed by the committee and presented at the next meeting, June 14.

More than half of the trade space has already been taken for the Dahlia Show to be held at the Hotel Pennsylvania, New York, September 27, 28 and 29, and many prizes have been contributed. The indications are that the total number and value of the prizes will be more than offered at any previous show.

Quite a number of orders have also been received for trade tickets which are offered at \$25.00 a hundred, the regular admission being 50 cents.

It was finally decided that only exhibitors occupying trade space will be allowed to do business in the hall during the show and that all competitive exhibits will be together, separate

from trade exhibits and not combined as was originally intended.

The many obstacles appearing have been overcome and everything now points to this being the largest and most successful show of any single flower ever held.

EDWARD C. VICK, Sec.

BOSTON.

The executive committee of the Gardeners' and Florists' Club of Boston has voted to hold a field day in the Arboretum on June 12. The Club will also hold a lady's night on the evening of June 15, and the annual picnic of the Club will be held at Cunningham Park, East Milton, July 22.

The May meeting of the Gardeners' & Florists' Club of Boston was held Tuesday evening with an attendance of about fifty. The address of the evening was given by Prof. Duchant, who

spoke on Service, and who was listened to with great interest. He used the blackboard to illustrate his points, and told of various ways in which both individual and business efficiency could be increased.

A hand cultivator was demonstrated and attracted considerable attention. It is the smallest power cultivator which has yet been seen and some of the growers seemed to think it might be used to advantage as a means of making up for lack of hand labor.

Refreshments were served at the close of the meeting.

Messrs Rogean and Noyes, well known salesmen in the Boston market have taken the agency for the Mary Garden Auto Cultivator. They believe that this cultivator can be used most successfully by growers and have a machine on exhibition at the market which has aroused much attention. Both men are known as hustlers and are looking for a large business this Spring owing to the difficulties in procuring labor.

"FRANK H. DUNLOP"

We are now catching up with our orders, and now offer for immediate delivery:

Entered as second-class matter December 2, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1879.

The Florists' Exchange discusses the advisability of having music at flower shows. One of our wide-awake readers sends us the following comment, which it seems to us disposes of the matter rather neatly:

"Anyone that says that flowers and music don't mix is talking like a frog. Of course, at a Flower Show, the music should be only incidental—the same as flowers should be at a Music Show. Sweet to the eye, sweet to the ear, fragrant as the morning daffodil, and glorious as the sunrise on a smiling morn—that's the ideal Flower Show. The first thing is to make a good show—then get the people there—even if it takes a steam calliope to wake them up. The rest will take care of itself and education has begun."

Difficulties with the postal service seem to multiply, with the result that all publishers find it exceedingly difficult to get their periodicals delivered on time. Complaints cover not only great delay in second class deliveries, but gross neglect and failure to deliver third class matter. It was reported that a short time ago the New York postoffice had on hand 80,000 bags of undelivered mail which had to be placed in a warehouse until it could be forwarded. Warehouses were said to be maintained in numerous western terminals such as Omaha, Kansas City, St. Louis and Chicago for the storage of third class mail. Delivery of local third class matter has been reported as in some cases 22 days late. In one case where 1,600,000 pieces of third class matter were mailed for delivery throughout the country before February 17, only 25 per cent were reported delivered over two months later. The National Publishers' Association is conducting a country wide investigation of this matter, and it is hoped that before many weeks more have passed some radical improvement will have been effected. Apparently there never was a time when the postoffice

department was in such a totally demoralized condition as now, and with a threatened restriction of the size of publications, with a possible tax on advertising, and unheard-of prices for paper, the situation in the publishing business is made exceedingly hard.

Flowers We clip this interesting item from the Philadelphia Record."

For many years the children of New England have indulged in a pretty practice that might very well be adopted here. During the last week or two of April the youngsters of both sexes busy themselves making May Day baskets of tinsel and crepe paper, which they fill with candles, and on May Day go about exchanging these with their schoolmates. This sort of thing could be made quite as effective a part of the current plan for circumventing the belligerent Reds, who have always batted upon May Day for their evil activities, as any of the other demonstrations of the American spirit that have been put into operation throughout the country. Let us take May Day from the Reds and give it back to innocent childhood, for it is to the children that May Day belongs.

To all of which we cordially agree and add the suggestion that flowers might be substituted for candies to help along their little minds as well as their little palates. The sweet tooth will take care of itself. Or, if you like—give them both.

Memorial Day Viewing Memorial Day from the standpoint of the New England florists, every prospect pleases. In other words there is promises of the biggest Memorial Day

business which Boston at least has ever known. It seems rather strange that the rest of the country has never made as much of a success of this occasion as has New England. In this section it is one of the biggest days of the year, while in many other places further West it passes without a great amount of attention and of course, is largely neglected in the South.

With the increased business of Mothers' Day to illustrate what can be done with proper publicity and a general attitude of co-operation, it is safe to predict that Memorial Day can be made, with a little handling, an exceedingly profitable day for florists in all the Northern and Western States, at least.

We are glad to find that even in the small cities the benefits of co-operative advertising and a general disposition to pull together on the part of florists is being manifested. In Syracuse the florists had a very attractive Mothers' Day ad. in the local papers which helped much to increase the business of the Syracuse dealers. The whole movement is spreading rapidly. To be sure it meets with drawbacks now and again, but on the whole it is going forward as rapidly as such an innovation could well be expected to go. Kansas City florists made such an effort for the first time on Mothers' Day, and the results were most satisfactory.

These lines are written for the encouragement of florists who are contemplating some special effort to bring about a large Memorial Day business. The public is ready to buy, and by presenting their wares in the most attractive way and by working together for a common end, there is no reason why the florists shouldn't put more money into their tills this year as a result of the Memorial Day business than ever before in the history of the trade.

We haven't always approved the course of Secretary of Labor Wilson, but he's absolutely right in refusing to modify the immigration laws by interpretation, and saying that changes must be left to Congress. Department-made law is intolerable in a free country.—Brooklyn Eagle.

Respectfully submitted to Mr. Marlatt and other backers of quarantine No. 37.

THE CUSTOM OF GIVING FLOWERS.

"When Jenny Lind was in Vienna, years ago, a lover learned millinery and floristry so that he might sew in her hat daily three red roses as a tribute to her art. He might have sent huge baskets to her over the footlights. But his method was more delicate. And Jenny Lind was pleased. Princess Metternich, too, used to wear flowers in her hat, according to a prominent florist, who trimmed exotic millinery for her daily.

"Muri Silba, the pianist, who sends her flowers to a hospital, declares that Americans are far behind most European countries in the art of presenting flowers to musicians and actresses across the footlights.

"American men orders flowers in large quantities, to be passed over the footlights ostentatiously by indifferent ushers," she says. "In Europe flowers are thrown on the stage, and are immediately acknowledged by the smile of the artist. Or they are presented in some other way which shows personal thought and effort on the part of the giver.

"In France, as in Germany, flowers are given not for their size and conspicuousness, but always with some potent meaning. They are given personally; they are selected with thought. Charlotte Wolder, the singer, expressed a preference for fresh picked violets. An admirer went off to the Riviera and arranged to have fresh picked violets sent to the singer by courier every day. Fiuri was an Italian singer. A lover of hers sent down into Italy so that she might have the small white daisies she was so fond of.

"In Italy they are impulsive flower givers. Here, as in Spain, they were wont to decorate the carriages and horses that draw the artist; to throw flowers on the ground before the horses, or even to unhitch the horses and draw the carriage with ropes of flowers. In Rumania, too, they were exuberant and extravagant in their gifts. They threw flowers from the windows so that they fell upon the head and all around the artist. The gift was impersonal. It was not made with the hope of reward, but as a tribute to the artist.

"In Russia, in the old days of aristocracy, there was something besides mere disinterestedness in the passing of a few posies over the footlights. Flowers, seemingly innocent, were often merely used as a camouflage for more costly gifts. Sometimes a pair of slippers with ruby buckles or a

pearl neck lace was concealed among the flowers which the singer received in full view of the audience. Russians were very lavish in their gifts of flowers.

"In Russia the industry of flower cultivation was in advance of most other countries. Russia, for example, was the first country to develop the forcing of lilacs in Winter. But candies too were used as a camouflage for less innocent gifts. Candies to ladies were often wrapped in hundred ruble notes.

"There are two countries which have not the custom of giving flowers to artists," added Muri Silba laughingly. "One is Iceland, where they have almost no flowers; the other is Japan. And in Japan the giving of flowers is considered to be too personal to be made personally; flower gifts are made in privacy."—New York Evening Sun.

GENERAL NEWS NOTES.

Samuel Murray, of Kansas City, is sending out cards containing a notice to the effect that his store will not be open Sundays hereafter. He announces that he will make late Saturday deliveries, and expresses his appreciation of the public's consideration and co-operation. The leaven is certainly working throughout the country, and the time is bound to come when the florists store which keeps open on Sunday, except under special circumstances, will be a rarity.

Mr. I. Rosnoski, of Chicago, is representing the American Bulb Co. on an Eastern selling trip.

The T. L. Murphy greenhouses at Celina, Ohio, have been purchased by Roy F. Meissa, of Ada. It is understood that Mr. Meissa intends to extend the business as rapidly as possible.

Flowers Under Glass

Hydrangeas for Memorial Day like a temperature of from 55 to 60 degrees at night. A little shade will help to hold them back if it is necessary. Remember that Hydrangeas require an abundance of water at the roots at this time. Two or three times a day is not too often for watering to be done. Plenty of ventilation is also necessary. If you happen to have any astilbes, give them about the same care. They are among the very few plants which will tolerate water in the saucers after they have been potted up for sale. Florists should tell their customers about this in order to help them keep the flowers in good condition.

This is a good time to sow fern spores, especially of those varieties used in making up small ferneries. A fine compost of three parts soil, one part of leaf mold and one part peat, with a little sand added, is suitable for these ferns. Give the compost a good watering and then let it remain three or four days before you sow the spores. The latter must be scattered evenly and carefully pressed in. The next step is to cover with glass and keep in a shady, humid house, with a uniform temperature. Keep the plants close to the glass so that they can have plenty of light, but the glass must be shaded to obviate direct sunshine.

This is a good time to repot palms as it encourages these heavy plants to make good growth during the summer. It may not be necessary to use any larger pots, in which case you need only remove some of the old soil from around the roots and substitute a fresh compost, which may well consist of fibrous loam, three parts, well rotted cow manure, one part, and a small amount of bone meal, say what will fill a five-inch pot, added to a barrow load of compost. Watch your glass and replace any whitening where it has been washed off, for it is easy to damage palms by scorching at this season. Plenty of moisture is most requisite, and it will help to give a couple of hoseings overhead on clear days. This will make the plants grow better and help to keep them green.

Begonias in 4 or 5-inch pots may be
plunged to advantage in mild hotbeds,
but of course there should be five or
six inches of ashes or soil over the
manure. In such a position the be-
gonias are readily hardened off with-
out any check. They should remain
until the middle of June, and thus es-
cape the low temperature which are
common in many parts of the country
late in May or the first week in June.
It is best to give the bedding begonias
that are pot bound a shift, using rich
soil. This will put them into good
condition before planting time. Tuber-
ous rooted begonias which are to be
bedded out should have plenty of room
or they will not thrive.

If you have a number of vinca cut-
tings which have been rooted during
the winter this is a good time to plant
them in the field. They should have
reasonably rich ground and be kept
well cultivated. With this treatment
they will be in good condition when
fall comes to be potted up.

NEW GLADIOLUS.

Ithaca, New York.

May 15, 1920.

Dear Sir:

The following named gladiolus has
been offered for registration by
Vaughan's Seed Store, Chicago, Ill. If
no objection is filed with the commit-
tee before June 1st the registration
becomes complete. The following is
the introducer's description:

"Name: Mrs. H. A. Caesar.

"Description: This seedling gladio-
lus is a cross of America with Sun-
beam. Its habit of growth is more ro-
bust than America, and with same
flowering season. The length of spike
is about the same but it produces
more buds, frequently showing five to
eight open flowers, well placed on the
spike. The color is a beautiful laven-
der, shading to lilac, with a yellow
dash in the lower petals. Admirers
have called it Orchid Beauty. The
spikes are uniformly straight and up-
right, with no crooked stems."

When writing to advertisers kindly
mention HORTICULTURE

DOLLAR CARNATIONS.

Max Schling Writes About the Mother's Day Agitation.

Gentlemen:

The article about that one dollar carnation which appeared this week all over the country in the daily papers, and most likely also in Canada, was something which will not do much harm to legitimate florists who have the confidence of their customers but it will do harm in circles which are not flower buyers and where we have to draw our new customers from.

There is no ill wind which does not blow somebody some good and if it did do some damage to put us in one line with profiteers it does some good also by waking us up and showing us how much more we have to work shoulder to shoulder, how much more we have to prepare to let the public know that we are live wires, that we are prepared to do business in a business way, and incidentally this will help the national publicity fund.

Everyone who hesitated so far to support national publicity will now jump in and put in his little mite towards the general fund, but there should be an extra fund to counter-balance such an occurrence. We should have money on hand to meet this underhanded propaganda against us florists.

Florists should not hesitate to send in subscriptions, no matter how small, one or two dollars, or even fifty cents, and while I am talking of fifty cents, how many thousands would we get if each one would only send fifty cents, but I know also that there are many who would send a few dollars, and we for one are willing to open that campaign with one hundred dollars. I hope we will be followed by others, and I propose that such subscriptions should be sent to the different trade papers and each one would very gladly print the names of the subscribers to this special fund, which should be kept on hand and collected after the meeting of the S. A. F., who could decide in what way such fund would be utilized for the good of the trade.

As the only constant advertisers in the New York daily papers on a large scale, we necessarily are in contact with the large dailies. We at once phoned them that there was no florist in New York or elsewhere who sold carnations for one dollar a piece.

The editors promised to investigate this unwelcome publicity and to enlighten the public as to the true facts. We ourselves advertised in New York City as per enclosed reprint, showing a short article and printing underneath, "Fiddlesticks. We give one

be advisable for all florists who do advertising in their respective cities to follow this same method.

I remember an incident of some years ago when Menelick sent the Crown Prince of Abyssinia to visit Washington. One of his body servants met so many well dressed men with a white carnation in their button-holes that he also in passing a flower shop thought he'd got to wear one.

His coat somehow didn't have any button-hole, but my dear Mr. African was not very much in doubt where to put his carnation. We remembered his split ears where he used to wear bangles while at home and the carnation went in. O my, O my, it was too small, not the split in the ear, but the carnation. The florist had to put four into one to make it fit so that it would not fall out again. The florist asked one dollar, which he willingly paid.

Is that the one dollar carnation which our brother florists in Washington are suffering from? It seems so. The only way to counterbalance such propaganda is to make it ridiculous. We spoke to everyone who is a flower buyer and in almost every instance the answer was, "why such a statement is ridiculous." "We never paid that price at any time of the year, how much less on Mother's Day." The story is for some people who do not know. The only way possible that a carnation could be sold at a dollar would be for two fools to meet each other, one selling the carnation for one dollar, not knowing what he is selling, and the other paying a dollar for the carnation, not knowing what he is buying, and it must be a much greater fool to believe that such is possible, but somehow some people believe anything.

I remember an incident when I told a reporter jokingly something about a cucumber tree and I had the darndest time to have his report cut out because not only he but a few others did believe that there is such a thing as a cucumber tree.

We ought to be thankful for such obstacles. In our efforts to put our business on the same commercial basis as every other high-grade business, to meet such obstacles will strengthen our energy, increase our ambition, and we will get more quickly nearer to the goal and incidentally all this will increase the success of our publicity campaign.

Yours very truly,

MAX SCHLING.

HENRY PENN'S SLIDES.

Henry Penn is sending out the following notice:

"We are loaning, gratis, our collection of Lantern Slides taken from newspaper ads, which are of special interest to florists and give a good general idea of our retail advertising.

"This makes an unusually interesting lecture if the Club will request any of the Advertising Clubs of their respective cities to send a member who will criticize or compliment the copy as it appears. A great deal of

WELCH BROS. CO. 262 DEVONSHIRE STREET BOSTON, MASS.

constructive good is usually the outcome.

"The following Clubs have already used them:—

Buffalo Florists Club.

Philadelphia Florists Club

Baltimore Florists Club.

"Better results may be obtained from this slide exhibit by consulting Robert Kift, Sec'y of the Philadelphia, Florists Club, 4044 Haverford Avenue, Philadelphia, Pa., who found them most instructive, and he will be glad to assist any secretary who may want to use them.

"As retail florist advertising is one of the chief topics in clubs nowadays, this makes a timely subject and their use may be had, gratis.

HENRY PENN,
Boston, Massachusetts.

EARLY FLOWERING RHODODENDRONS.

Only three or four of the Rhododendrons which bloom before the first of May can be grown in this climate. The handsomest of these, Rhododendron mucronulatum, which has flowered every spring in the Arnold Arboretum for nearly twenty years, has perhaps not before been as thickly covered with flowers as it has been during the past ten days. A native of northern China and Korea it is a tall deciduous-leaf shrub inclined as it grows old to a straggling habit, with long slender branches and pale rose-colored flowers which open before the leaves appear and have never been injured here by April frosts. This is one of the handsome April flowering shrubs which can be successfully grown in this climate. The flowers are still in good condition on the plants in the large group on

the lower side of Azalea Path. Rhododendron dauricum, which begins to bloom a few days earlier than R. mucronulatum, has been unusually handsome this spring as the flowers which are generally destroyed by frost have not been injured. It is a native of eastern Siberia and Manchuria, with bright rose-colored flowers and dark green leaves which in this climate remain on the branches until mid-winter. There is an evergreen variety (var. sempervirens), which has also flowered well this spring with the species on the upper side of Azalea Path. The flowers of the hybrid between Rhododendron dauricum and the Himalayan R. hirsutum, known in gardens as R. praecox, "Early Gem," are also in good condition this year; usually they are ruined by frost.—*Arnold Arboretum Bulletin.*

The eighty-ninth annual exhibition of The American Institute of the City of New York, will be held November 3rd to 5th 1920 in the Engineering Building Nos. 25 to 33 West 39th street. Chrysanthemums will be the principal exhibits, but the show will include Roses, Carnations, Fruits, Garden Vegetables, etc. For schedule of prizes address Wm. A. Eagleson, Secretary, Board of Managers, 324 West 23rd Street, New York, N. Y.

Yours respectfully,

WM. A. EAGLESON.

The Johnson-Randall Co., of Chicago, having bought the interest of T. L. Noll in the wholesale firm of T. L. Noll & Co., Kansas City, Mo., will now do business as the Kansas City Cut Flower Co. L. R. Bohannon a former Chicago florist, will be the manager.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have just received from Miss Marian Roby Case, of Hillcrest Farm at Weston, Mass., an attractively bound report of the work done at the farm last year. For ten summers now Miss Case has been conducting Hillcrest Farm for the benefit of the boys whom she has gathered there, and to the advantage of the community. Miss Case herself is a woman of rare insight into human nature, combined with unusual business ability and a keen sympathy for every form of outdoor work. At Hillcrest Farm she grows a surprisingly large number of flowers and foliage plants, as well as fruits and vegetables. The boys under her care learn by doing, and in addition to the practice work of the farm are given the benefit of many lectures by well known men and women throughout the summer months. The current

report has a summary of last season's lectures written by the boys themselves, and is full of much interesting and valuable information. It would be a fine thing if more people having the means to do so would take up the kind of work which Miss Case is so capably carrying on.

Many people who have met Woon Yun Chun at Hillcrest Farm or at the Arnold Arboretum where he studied with Professor J. G. Jack for several years, will be interested to know that he has now returned to China in order to undertake quite extensive botanical explorations. Mr. Chun received a Sheldon scholarship, which is given each year to enable students to study and travel abroad. He expects to spend much of his time in the provinces of Chekiang, Kiangsi and Fukien,

which are probably the least known of China's domains and from which almost no knowledge of scientific value has yet come. Mr. Chun will devote himself to botanical research and will collect seeds and fruits of beautiful or useful trees, shrubs and flowers for introduction to American gardens. With him are three graduates of American colleges who are taking up other lines of work, including the collection of insects, snakes, lizards and so on. Mr. Chun spent five years at Hillcrest Farm, going there when he was only 19, and for three years he was manager of the boys, proving very efficient in that capacity.

The late season has been a great disappointment to flower and plant lovers. This fact in addition to an abnormally large number of rainy days has interfered with displays of all kinds in the Arnold Arboretum, as well as in other parks and gardens. Many of the trees also suffered from the severe cold, so have not bloomed as freely as usual. This applies even

Magnolia glauca

CASTORLAND

NEW YORK

to several of the cherry trees. The weeping cherry I have seen in some gardens blooming beautifully, but in the Arboretum these trees are not doing as well as usual. This is the form of *Prunus subhirtella*, var. *pendula* which has long been a favorite garden plant in Japan, and was sent many years ago to Europe and then to the United States. As Professor Sargent points out, while this plant is perfectly hardy in Massachusetts, it often grows badly here and dies long before its time because European cherry stocks have been used for multiplying

it. The proper stocks for the weeping cherry are the seedling plants of *Prunus subhirtella* var. *ascendens*. Using this stock the results are vastly better.

Corylopsis is an Asiatic genus of the Witch Hazel Family with light yellow flowers in long drooping clusters appearing before the leaves which have a general resemblance to those of the Witch Hazels. Nearly all the species are represented in the collection of the Arnold Arboretum, but only *C. Gotoana*, a native of the elevated regions of central Japan, is worthy of general

cultivation in Eastern Massachusetts, for it is perfectly hardy here even the flower-buds having been uninjured by the exceptionally low temperature of the winter of 1917-1918. This is one of the handsomest of the early spring flowering shrubs which can be grown in this part of the country and one of the important Arnold Arboretum introductions. The largest plant in the collection is on Hickory Path near Centre street and is now covered with flowers. A small plant of another Japanese species, *C. pauciflora*, growing on Hickory Path near C. Gotoana, is also now covered with flowers. This is unusual, for although the plant is hardy the flower-buds are often killed by cold, as are those of another Japanese species, *C. spicata*. The stems and branches of the Chinese species, *C. Veitchiana* and *C. Willmottiae* are uninjured, but the flower-buds are killed. These plants have flowered in the Arnold Arboretum, but two years ago they were killed to the ground and there is little hope that these handsome shrubs will prove useful for New England gardens.

The early promise of the magnolias for a fine blooming season has been fulfilled. In spite of the cold winter even the most delicate seem to have suffered not at all. I can hardly remember when *Soulangeana* and other hybrids have bloomed so well. Apparently *Magnolia glauca*, the Sweet Bay which is an especial favorite in New England, and which grows so readily in certain sections there, will be quite as free with its blooms.

A new edition of the pamphlet called "Hardy Perennials and How to Grow Them," issued by Henry F. Michell, of Philadelphia, has just come to my desk. As supplementing their catalogue, this is a remarkably valuable little book. In it have been selected the perennials which are most desirable for the garden of the amateur, and because the list is not too long each kind can be treated at considerable length. The illustrations are excellent, and it is safe to say that the pamphlet has proved and will continue to prove itself very valuable as a business getter.

In the farm life of America since 1877 the Farm Journal has been prophet, priest and king, and a more potent power for good in its chosen field is impossible to imagine. On the surface the publication has always been modest and unassuming, but its Quaker simplicity and sterling worth was, and is, the potent influence which has moulded for good the lives of countless thousands in every state in the Union. Long may it prosper and keep on shedding its benign influence. These lines are penned by one who has read it religiously for thirty-six years, and are inspired in the present instance by the passing away of Wilmer Atkinson, founder of the paper, and its editor for forty years. Mr. Atkinson's ancestors came over in the "Welcome" with William Penn, and the passing of the centuries shows no falling off in the high character and sterling worth of those who today represent the parent stocks. Wilmer Atkinson, during his long and active life of eighty years, was a shining example of their sterling worth, and a worthy bearer of their everlasting banner, which waved, then as now, for a deep

love of truth and unsubduable courage in its defense.

Of the nine English roses of the prize winners of 1919 across the water, pictured at page 112 of the Rose Annual, if we were asked to pick out our favorite variety, judging from the picture alone, the one marked No. 5 would be our choice. The formation of the flower in bud and blossom is ideal. This variety, is one of McGredy's, and has been named Victory. It is described as a very fine dark red H. T. rose of vigorous growth. The blooms are moderately scented and are carried on long stiff stems. The foliage is a pretty olive green, contrasting very harmoniously with the red blossoms. The editor very properly calls attention to the fact that there is an American variety named Victory, registered April 6, 1918, and we think that matter should be straightened out to prevent confusion hereafter. Victory is a good name and we would suggest that it be given to the best one of the two, and rename and re-register the other.

At page 75 of the Rose Annual you will find out what you have to do if you want to order some new roses from Europe. After studying this for a little while you will probably decide that you had better try and get along for the present with what you already have.

There seems to be a wide demand for a color chart to aid in describing new roses and other flowers. In this connection it may be recalled that the same want was emphasized a generation ago and resulted in the publication by the American Florist of a color

chart designed by the well known artist F. Schuyler Matthews. I think this chart can still be obtained from the publishers at a very moderate price and it would perhaps be a good idea for the editor of the Rose Annual to arrange for its reproduction in the 1921 edition.

The enquirer who asks for the name of some insecticide that would put an end to rose enemies with one good dose should write to Charles H. Breck of Boston for his formula. Thirty-five years ago he was making the welkin ring with his discovery and I don't know that it has been improved on even to this day. Mr. Breck has a fine rose garden out Newton way, near Boston, and takes great pleasure in his favorite flower in the intervals of strenuousness from a big seed business in the Hub.

When you want to get some good seed, it may be all right to send to this concern:

**EXHIBITION OF THE AMERICAN
PEONY SOCIETY.**

At a meeting of the directors of this Society held at Reading, Pa., recently, a prize schedule was adopted for the spring show to be held at Reading. The dates provisionally set are June 10 and 11. The show is to be set up at the Hotel Berkshire, and all those who plan to be there should make their reservations of rooms at the hotel without delay. On the evening of the first day, there will be an informal dinner with the Reading Chamber of Commerce. For the following day an automobile trip is planned, to give the visitors some idea of the beauty spots in that picturesque region.

The Pennsylvania Horticultural Society is also aiding very generously to provide a prize schedule that is much larger than at any previous peony show. It has been especially enlarged so as to appeal to the gardening fraternity in and around Philadelphia—a region famous for its fine estates and gardens.

Entries for the show are to be addressed to Mr. David Rust, secretary of the Pennsylvania Horticultural Society, 606 Finance Building, South Penn Square, Philadelphia; and all exhibitors are particularly urged to get in their entries not later than June 1st. It is impossible to make adequate preparation for vases and table space unless something is known beforehand as to the number of entries in each class.

BISHOP'S HAT

(Epimedium macranthum)

Some flowers have already passed from the floral pageant of the year. The crocusses have held their cups to the bees and dropped them. The winter aconite has gone. But the delicacy of the spring flowers is still with us. Blossoming under a great oak, where maidenhair and dicksonia ferns grow to perfection, is a dainty herb from Japan known as the Bishop's Hat from the square, flat shape of its blossoms.

The blossoms are in loose sprays which branch off from the main stems two inches below where the main stem divides into the three sprays which bear the leaves. They come in buff or soft yellow, mauve and white. The one which has done the best at Hillcrest gives the Bishop a yellow lining to his dark red hat. It is well arranged for his Grace's comfort, as under the square flat hat is a little cap to hold it well in place. It is so pretty a hat that we hope it is in the ritual of the floral world for it to be

LEMON OIL COMPANY

Dept. S. 428 W. Lexington St., Baltimore, Md.

worn in the ceremonies of their service.

The loose spray of blossoms is six inches long from where it branches from the main stem. The whole plant is more than a foot in height. The single flower about the size of a dime. The pretty red buds are on the spray with the flowers.

The leaves are a soft yellow green, parallel veined and pointed at the open. The main stem divides into three sprays for the leaves. The whole plant has an airy, unusual and very pleasing effect. The old leaves persist on the stems through the winter and have to be gathered with the spring litter from the gardens.

The plant is easily propagated by the division of its root. It should not be confused with the Bishop's Cap, Mitre-wort or Mitella, which more nearly resembles the Tiarella or Foam Flower. His Grace, the Bishop, is well adorned in Puritan New England.

M. R. CASE,

Hillcrest, Weston,

May 11th, 1920.

At the May meeting of the Hartford, Conn., Florists' Club, Max Schling, the well known New York florist, was the principal speaker, his subject being "General Work in a Retail Flower Store and Business Ethics."

The Youngs, of Portland, Ore., are to take over the retail store of Martin & Forbes in June. Mr. Fred Young has recently made a trip to California where he purchased a carload of palms. Palms have been pretty scarce in the Oregon section for some time, but shipments are now being brought in. The Rahn & Herbert Co. are among other florists to have a good supply.

Mr. C. Britt has retired from the Beaver Dam, Wis., Floral Co., and the business will be continued by his former gardener, Mr. Jacob Kolb.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Extra fine specimens.....10-inch, \$5.00; 12-inch, \$7.50

NEPHROLEPIS:	Each
Dwarf Boston, 6-inch.....	\$0.75
Elegantissima, elegantissima compacta, 3½-inch.....	.35
Muscosa, 3½ inch.....	.35

NATIONAL PUBLICITY CAMPAIGN.

Every day now comes further proof of the efficacy of our campaign. The beneficial results are indescribable almost, in so many directions does our slogan mark. There is one direction in which florists themselves can give the slogan tremendous publicity, at the same time calling attention to their own establishments—the installation on their own grounds of the official billboard sign provided by our Publicity Committee.

These signs are furnished at \$50 each, direct from the factory in Indiana, and if they were to be purchased singly they would cost to-day considerably over \$100 each—the material alone would eat up the \$50 asked for them. If ever the time should come when a purchaser felt he had no use for the slogan, he would still have the sign, adaptable to any other purpose—and it's a good sign, too. Just think of it, a sign 20 ft. long, 7½ ft. wide, constructed of galvanized iron on a wood frame, and weighing about 300 lbs. The slogan is painted in the official colors, three coats of paint being used to insure permanency. It is very easily set up, and once installed shouts for business day in and day out, moonlight nights included.

We take care of quite a number of orders for immediate shipment, in fact our shipments can be affected only by railroad troubles, such as have hampered deliveries for some weeks, but which are gradually disappearing. At one time we had thirty or more signs awaiting the lifting of an embargo, but we believe all are moving to their destinations as fast as their routings become clear. Any florist who wants to do a good turn to himself, and, incidentally, add to publicity for the slogan, should get a billboard sign. In appearance it is handsome, and, unlike most such signs, conveys a message rather than an exploitation. Now is the time to install one, when everybody who can get upon four wheels is enjoying the great outdoors.

The time is also opportune for increased support of our Campaign Fund. With advertising contracts already entered into covering the Summer months, months when florists must continue in business just as at other times, our Committee is busy planning for the months to come after

GENERAL NEWS NOTES.

The McClements Co., Pittsburgh, Pa., have opened a new store at 535 Wood street. The firm consists of John McClements and Walter Breitenstein, formerly identified with Randolph & McClements, in East Liberty. Aschmann Bros. of Philadelphia, are building a large greenhouse to replace

BOX-BARBERRY

Have you seen a garden bordered with BOX-BARBERRY this spring? Every plant bright and green,—not a dead one. A strong contrast to the northern Buxus bordered garden, now either dead or sadly winter injured, brown and dejected looking.

Mr. Siebrecht, the veteran plantsman, on seeing the garden the other day shown in accompanying illustration, exclaimed with his characteristic enthusiasm, "magnificent, there is a fortune in it for the nurserymen."

We offer you well rooted dormant summer frame cuttings ready to set out direct into the nursery without further expense to you at

\$65.00 per 1000

ALL SOLD OUT OF LARGER SIZES

Many of the leading catalogue firms have already contracted with us for their supply for the ensuing season, and others are buying these FRAME GROWN PLANTS for their own planting preparing for the enormous demand which is sure to follow.

It is a safe statement that BOX-BARBERRY will soon be the plantsman's best seller.

THE MARKET.

There seems to be a disposition in Boston to hold back on stock, which accounts for the market being short in supply while in other markets stock is plentiful. Candytuft and snapdragon are especially short, and it is predicted that these items will be in short supply for Memorial Day. As a rule, the markets throughout the country are holding steady.

Roses in Boston range all the way from \$6 to \$15 according to quality and length of stem, which is about the same in other cities. The average for carnations the country over was from 5c to 8c the beginning of the week, with a gradual increase as the week wore on. At this writing it is impossible to tell what the final price will be. There are more white carnations in Boston than other colors and customers are compelled to take white in order to get the other colors. Callas are now selling for 20c when they can be obtained, but there are none in Boston; lilies are also scarce. Sweet peas are fairly plentiful at from 75c to \$1.50 in other markets, but the cold, cloudy weather worked havoc with them in Boston and as a result they are soft and worthless in most cases. The price on marguerites varies greatly. They are plentiful in Buffalo and bring 1 and 2c, but in Boston they are selling at from 3 to 6c. In Pittsburgh they brought 4c readily. Tulips have had the same varied career the past week. Buffalo reports them selling as low as 2c., while in Pittsburgh they sell at 8c. They are short in Boston. Violets are out of the market. Altogether, the indications at this writing are for a plentiful supply of flowers for Memorial Day with moderate prices prevailing the country over.

PATRICK O'MARA DEAD.

Past President of the S. A. F. & O. H. Passes Away at His Home.

Word has just been received of the passing away of Patrick O'Mara, one of the most prominent members of the trade in New York City, and well known throughout the country.

Mr. O'Mara was a past president of the S. A. F., having been elected to that office in 1901. He was also a past president of the New York Florists' Club. For many years he has been prominently connected with the firm of Peter Henderson & Company, and has had a welcome for hundreds of members of the trade outside the city who

The Late Patrick O'Mara

have met him in New York. Mr. O'Mara was very popular for his congenial ways and the sterling qualities which characterized all of his activities in the S. A. F. and the New York Florists' Club. He will be missed by a

wide circle of friends and acquaintances, both within and outside trade circles

A New Crabapple.

Flowering branches of a remarkable new Crabapple have been sent to the Arboretum from a garden in Brookline. It is evidently a hybrid, and there can be little doubt that one of the parents is the curious variety of *Malus pumila* from Turkestan and southwestern Siberia known in gardens as *Malus Niedzwetzkyana*; the other might well be *Malus floribunda*. Of this species it has the slender branchlets and the pubescence on the young leaves which soon become nearly glabrous and green. The bark and wood are tinged with red and thus show the influence of *M. Niedzwetzkyana* as does the red juicy flesh of the fruit which ripens in October and is about an inch in diameter. As a garden plant the value of this new hybrid is in the color of the flowers which is dark rose-red, and much more beautiful than that of the flowers of *Malus atrosanguinea*, which is the common red-flowered Crabapple of gardens. The flowers are fully an inch and a quarter in diameter and are produced in as great profusion as those of *Malus floribunda*. In habit the three plants of this hybrid which are known resemble *M. floribunda* and are as hardy. The handsomest of all the red-flowered Apples which have yet been seen, this hybrid promises to be an important addition to garden plants. Unfortunately nothing is known of its history beyond the fact that the Massachusetts nurseryman who sold them to their present owner bought them as *Malus Niedzwetzkyana* from some one whom he has forgotten.

THE TALK OF THE TRADE

Cold storage lilies bid fair to be good property during the summer and early fall months. There seems to be no great quantity being forced, and with only a normal demand the market should clean up everything that is offered at fair prices. While it is true that nothing but good prices can be looked for if the grower is to get his money back, at the same time we have noticed that at no time after Easter when there is usually a slump in lilies has this crop gone down to anywhere near the point of other years. We think on the whole that even with the high prices of bulbs considered, the grower of lilies has come out whole in almost every case.

Begonia plants of such varieties as Melior, Cincinnati, Lorraine and Peterson are in excellent condition for this time of the year. The Eastern markets are sure to have a heavy quantity of good-sized plants. The stock that will be in large sizes for the holidays is showing up nicely now, and there is no question of there being a normal quantity of good-sized plants, and of course there is plenty of time to work into the small sizes for another six to eight weeks.

Quite a number of begonia growers are working hard now on top cuttings, and from now on it will be a busy time getting all the stock that is possible from tops. These cuttings will make good plants if carried along properly, and for making up particularly they are good value. Of course they do not give the same symmetrical, well-flowered and well-finished plant that a leaf cutting does, but for smaller sizes such as four and five inch, and for mixed hampers and pans, they suit every purpose.

Cineraria stellata seems to be coming more in favor as a commercial plant, and there is no reason why it should not have its place with other pot plants of similar character. Well-grown plants of stellata are very attractive, and there is no doubt that they will find a ready sale.

The main difficulty is that there is a tendency to have them in too large sizes. It would not be advisable to start the seed at this time, as this would mean plants that would be too large to handle well. Seed started in

July should give good results, and a good strain of stellata will prove a pleasing crop in more ways than one.

A crop that should be considered at this time is Hydrangeas, if you want good plants for next season forcing, and I have noticed growers going pretty heavy on stock for growing on in such sizes as 2, 3, 4 and even as high as 5 inch, which should make a good assortment of sizes and good stock for next season.

A most excellent list of varieties is offered, such as Mme. E. Moullere and Avalanche in white, which are always to be considered. Baby Bimbinette is one that has become very popular. It is dwarf in growth, a beautiful, lively, deep pink color, and is an easy one to grow. Lille Mouillere is also one that everyone should handle; it is doubtful if there is any one single variety in French hydrangeas that has more friends.

Souvenir de Mme. E. Chautard is one of the older varieties and still very satisfactory. Trophée is one of the later ones that has found a place for itself. It is strong in growth, blooms very freely, and is the deepest in color, of any of the French that I have seen. It can safely be called

red. Mont Rose is another good pink and it has one feature in particular that makes it valuable; it will stand any amount of abuse, and flowers almost continually.

Besides those mentioned, there are other good varieties which are commonly grown, such as Eclairer, Gen. de Vibraye, Mme. Auguste Nonin, Mme. Maurice Hamar and Mme. Foucard. The latter is also a very deep colored variety and is popular for that reason if for no other.

We read continually in the daily press about the great numbers of immigrants coming into our country, but how long must this continue before the florist is going to feel its effect? It is a safe bet now that the numbers coming in are being absorbed in other lines just as fast as they land, and all florists agree that no sign of a let up in the labor situation has showed up to this time. That is brought particularly to our attention when we see florists advertising and hear them calling and offering for unskilled labor at wages as high as \$5 and \$6 a day, and in some cases even more; and for so-called skilled labor, which simply means in most cases the slightest experience, \$35 per week upwards. As a matter of fact, the unskilled laborer who will help in emptying and filling

Cineraria Stellata

the houses and work of that character can get every bit as much as the man who has worked into the business and can rightly be classed as skilled labor. Of course the job of the man with the pick and shovel is more or less unsteady, but it comes right down to the same case in our business as in other lines and that is, the man with brains and experience is not paid proportionately with the man who has nothing to give except his muscle.

With the question of wages and the coal situation as it is, together with all other proportionate increases and expenses, there is no way for the florist to break even excepting by continued high prices, and even that will not let him break even without the very highest possible production per square foot.

When writing to advertisers kindly
mention **HORTICULTURE**

A Hybrid Shad Bush.

In 1892 the Arnold Arboretum received from Heinrich Zabel, Superintendent of the Botanic Garden at Zurich, seeds of an Amelanchier which he had obtained from the Simon Louis Nursery near Metz, and called Amelanchier canadensis grandiflora. He considered, perhaps correctly, that his plant was a hybrid between A. canadensis and A. laevis. The leaves are certainly intermediate between those of these species; the flowers, however, are only just now open, nearly three weeks later than those of A. canadensis and ten days after the petals of A. laevis have fallen. The flowers, too, of this plant are larger than those of either of its supposed parents, and larger and more beautiful than those of any Amelanchier which has ever grown in the Arboretum. The Arboretum plants are large shrubs rather than trees, but they look as if they would have formed a single trunk if they had been pruned. Whatever may have been the origin of this plant, or whatever habit it may assume, it is, when in flower, the most beautiful of all the Amelanchiers, and this week one of the conspicuous plants in the Arboretum. Several other handsome and interesting Amelanchiers are also in bloom in the collection on the left-hand side of the Meadow Road. Among them is the species of China and Japan, A. asiatica, and A. vulgaris of Europe, the only Amelanchiers which grow naturally outside of North America. The curious northern A. Bartramiana with small flowers in one or few-flowered clusters, and four or five other species from the northeastern part of the country, are still in flower or are beginning to shed their petals. The Amelanchier collection, however, is by no means complete for several of the western species have not yet proved amenable to cultivation in the east.

BIG ROSE SHOW PLANNED.

To Be Held in Boston Next Spring—
\$6,000 Worth of Prizes.

The Trustees of the Massachusetts Horticultural Society have voted to hold a spring exhibition in Horticultural Hall, Boston, April 5 to 9, 1921, with an appropriation of \$6,000 for prizes. Roses will be the special feature of this exhibition and a first prize of \$1,000 is offered for a rose garden. Other exhibits of spring-flowering plants will be included in the schedule which will be issued shortly.

Worth While Primulas

Malacoides Rohrerii. The best strain of Malacoides on the market. Years of patience have developed it to perfection. MICHELL'S SEED HOUSE

518 Market Street Philadelphia, Pa.

George Watson's Corner

"You in your small corner and me in mine."

Rose lovers these days will be interested in the following extract:

"The rose the Queen of Flowers, while we can grow and bloom it in perfection, yet so far we have not been able to compete with Europe in the raising of new varieties. The possibilities here are very great. We are expecting great things from some of the more favored states of the South where the seedling plants can be treated to an all the year round outdoor treatment and also from Queen Rose's Paradise, California, where some systematic operations are now in progress with the object in view of improving the rose for American horticulture."

That was said to the flower men of Boston over a quarter of a century ago—to be exact, on January 8, 1894—by the late Edwin Lonsdale of Philadelphia and in the light of the present day we will all agree that he was a true prophet. Indiana has given us Columbia and Premier and other good things, Maryland has done well, and as for California who among us but enthuses over the glorious Los Angeles, to mention but one of many. If our well-beloved brother Ed. were alive to-day, wouldn't he wave his hat over it. But we must not forget that Massachusetts has also done well with such fine varieties as Russell and Hadley and others. So it would seem that there are possibilities in other localities, besides the South and California. So let all take heart and keep on with the good work.

Robert Buist, an old time Philadelphia florist, who among other notable things introduced to the world the Poinsettia, if he came back would hardly realize how the world has changed, since he ran his nursery in what was open country 50 years ago. But his name still lives, as the live and hustling seed store at Front and Market street testifies—with its six deep at the counter these spring days—and the boys playing ball in the Buist Athletic Field on the old Buist homestead at 68th and Buist avenue.

Rosa Hugonis bloomed last year in the S. S. Pennock rose garden at Lansdowne, Pa., May 11. This year it

will bloom from present appearance on the 20th, which puts the season in this neighborhood about eight to ten days late. Other things are in about the same proportion and the Hugonis is only a concrete example of the general situation.

THE JUNE PEONY SHOW.

Plans Are Being Perfected for the Exhibit at Reading, Pa.

With regard to the coming Peony Show to be held at the Berkshire Hotel, Reading, Pa., on June 10-11, the following information from Mr. B. H. Farr will be of interest to intending exhibitors and to visitors generally:

"As hotels are and will continue to be very much crowded, it is of vital importance that visitors who contemplate staying over night should make reservations at the Berkshire Hotel in advance. I have already received some notices of reservations to be made, and shall be very glad to attend to this personally for anyone who wishes, or they can address directly Mr. Peter Kline, proprietor of the Berkshire Hotel. The rates for rooms are from \$2.50 up.

"In the second place, flowers for exhibition from a distance can be sent in my care, addressed B. H. Farr, American Peony Society, Berkshire Hotel, Reading, Pa. Exhibitors whose blooms open in advance of the date of the show, can send them here five to ten days before the show, and we will place them in cold storage, which can be done at the nominal charge of 25 cents a package of any size or length of time. That is the way I have had to handle most of the flowers I have sent to previous exhibitions. Our storage plant here is dry storage and an exceptionally good one, and flowers will keep in perfect condition for some time.

"It is very necessary that intending exhibitors should notify us in advance of the classes in which they expect to enter. Such notice may be sent to me or, to save time, directly to Mr. David Rust, Secretary of the Pennsylvania Horticultural Society, Finance Building, Philadelphia, Pa."

AMERICAN ROSE SOCIETY

The rose garden days planned this year by the American Rose Society promise to bring rosarians of the different sections of the United States together for "feasts of beauty." The Washington, D. C. Rose Test Garden Day will be the first of the season. On Wednesday, June 2nd, the Society will hold an all day session in Wash-

ington, visiting the rose test garden. Mrs. Bell's garden at Twin Oaks, the site of a National Rose Show Garden on the banks of the Potomac will be dedicated in the afternoon. The business session of the Society will follow a luncheon, probably at the Ebbit House about 1.30 P. M. It is hoped that there may be a large attendance of members at this meeting. The Executive Committee will hold a business session at the Ebbit House on the evening of June 1st at 7.30 P. M.

Other Rose Garden Days are scheduled as follows: Elizabeth Park, Hartford, Connecticut, June 24th; Cornell University, Ithaca, New York, June 24th; Portland, Oregon, June 25th; Minneapolis, Minnesota, July 3rd. The local committees of the rose test gardens are arranging the programs for each of these days, and the members of the American Rose Society in the vicinity of each should attend.

A committee which promises to be of much service to the members of the Society has recently been appointed by President Pyle. This is a committee of consulting and advising rosarians, and is composed of the following: Dr. W. Van Fleet, Washington, D. C.; Robert Pyle, West Grove, Pa.; A. N. Greeley, Williamsport, Pa.; John Dunbar, Rochester, N. Y.; W. C. Egan, Highland Park, Ill.; Theodore Wirth, Minneapolis, Minn.; S. S. Pennock, Philadelphia, Pa.; J. Horace McFarland, Harrisburg, Pa.; Professor E. A. White, Ithaca, N. Y.; Jesse A. Curry, Portland, Ore.; Geo. H. Peterson, Fairlawn, N. J.; Fred M. Howard, Los Angeles, Cal.; John Cook, Baltimore, Md.; Alexander Cumming, Cromwell, Conn.

Diseases: Dr. L. M. Massey, Ithaca, N. Y. Insects, C. R. Crosby, Ithaca, N. Y.; Mr. C. A. Weigel, Washington, D. C.; Professor G. J. Sanders, Harrisburg, Pa.

These rosarians have agreed as a service of rose love to reply to courteous inquiries when such inquiries are accompanied by a self-addressed and stamped return envelope, and when the inquirer definitely states that he or she is a paidup member of the American Rose Society.

Entered as second-class matter December 2, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1879.

While the late spring has retarded planting operations and has been a serious drawback to the making of gardens, it has held compensations for the plantmen by making it possible for them to ship much later than usual. And they have welcomed this relief, because it has made it easier for them to overcome the handicap of shipping conditions, which are the worst ever known in the history of the trade. And not only the nurserymen, but florists, seedsmen and dealers in supplies, have been affected the same way. There has been almost a famine in wheelbarrows, for example, and other tools have been hard to get.

In Massachusetts, the State Department of Agriculture has for several weeks had men at work tracing cars laden with fertilizer in the endeavor to hurry them along so that suspended operations on the farms might be resumed. One of the leading dealers in seeds in New York City stated that traffic conditions were worse than they had been within the past ten years. New York firms have been compelled to ship by express even in carload lots. Seeds that, under ordinary circumstances, would have been shipped by rail have in many cases been distributed from Boston by truck. The freight tie-up has already caused a considerable diminution of planted areas in New England. If not speedily relieved it will cause very much greater lessening of prospective crops. It goes to emphasize the fact that the trouble on the railways is everybody's business.

It had been hoped and expected that after the wartime period had passed the difficulty of securing labor and fuel for maintaining private greenhouses would be over. As a matter of fact, many estate owners started in to reconstruct and improve their places, and planned much new work. Indeed, considerable new work is now under way, and a number of important greenhouse projects are being carried out. Nevertheless, the labor problem and the fuel question, like Banquo's ghost, will not down. This condition is indicated by a recent report from Lenox, Mass.,

where many of the finest estates in the country are located, including the great country home of the late Andrew Carnegie. The members of the Lenox Horticultural Society are undecided even as to the holding of exhibits, although their shows have been important horticultural features for years. It is found very difficult, however, to get qualified greenhouse men or for that matter gardeners and even day laborers.

The question of wages is not the only obstacle, either, in Lenox as elsewhere. The lure of the city is strong upon members of the craft, and many of them seem loath to take places on country estates. Yet the wage question is one which must be adjusted finally, for in some cases men working by the day or week are demanding higher pay than is received by the foremen or superintendent, who has given years to the study of his profession.

The fuel situation complicates matters badly. This applies to private estates as well as to commercial greenhouse men. Owners feel hesitancy about keeping up their establishments when there is danger that the coal supply will fail. As it is, very few of the larger estates are keeping their greenhouses up to standard. For years Mr. and Mrs. W. E. S. Griswold has maintained one of the most productive greenhouses in Lenox and one that has won many prizes by its products at Lenox, Boston and New York shows. Now the greenhouses on the Griswold estate have been practically closed. It is obvious that horticultural conditions in America are not likely to become normal for a long time, and meanwhile there is great danger that the garden profession will suffer badly by the breaking up of its rank and file.

Just because little has been heard of late about Quarantine 37 is no indication that that oppressive measure has been overlooked or that gardeners in general and the trade in particular have become reconciled to its harsh provisions. On the morning of June 15, an important conference is to be held in the Museum of Natural History, New York City, to consider the quarantine from a new angle. The conference has been called by the Massachusetts Horticultural Society, Wm. C. Endicott, president, the Horticultural Society of New York, T. A. Havemeyer and the Pennsylvania Horticultural Society, James Boyd, president.

The call which has been sent out urges the attendance of everyone interested in the improvement of horticultural conditions in this country. It has been said that many hundreds of the leading amateurs and semi-professionals in the garden craft will be present. Not only will garden clubs and horticultural societies from various parts of the country be on hand, but many other prominent gardeners will be present as interested individuals. The trade will also have representatives of various societies, including the S. A. F., and are sending delegates.

The meeting is to be in the nature of a formal protest against the uncalled for severity of the embargo, and it is expected that all phases of the subject will be taken up in detail. Of course, nobody can tell what the result will be. The Horticultural Board at Washington seems adamant. Yet with every chance of a political overturn within the next few months, it is probable that the influence of this meeting will be far reaching and in the end effectual. Members of Congress are beginning to realize that something is wrong in the methods of the Horticultural Board, and they should be given no peace until some means of rectifying these wrong methods is evolved. Such meetings as the one planned for New York will do much towards awakening popular opinion and focusing the attention of law makers on the issue.

Cornus Mas.

The Cornelian Cherry of old-fashioned gardens opened its first flowers on April 18th this year, and the leafless branches are still covered with its compact, may flowered clusters of small bright yellow flowers which are unusually abundant this spring. This Cornel is a native of eastern Europe and western Asia, and for three centuries at least has been a favorite garden plant in western Europe. It is a large and shapely shrub and with a little care can be made to grow with a single stem in the form of a small tree. It is handsome from early spring until late in the autumn, for the leaves are large dark green and lustrous, but fall without having changed their color, and the short oblong, scarlet, lustrous or rarely yellow fruit which hangs on stout stems is cherry-like in appearance and ornamental. The fact that the flowers are never injured by April frosts greatly adds to the value of this plant for the spring decoration of parks and gardens in the Northern states.

Malus Theifera.

Malus theifera, one of Wilson's discoveries in western China, with its long spreading and irregularly ascending branches has such an unusual and picturesque habit for a Crabapple that it is easy to recognize at any season of the year. When covered with its innumerable clusters of rose-red buds and pale rose-colored or nearly white flowers it is one of the handsomest of the Asiatic Crabapples. Judging by the behavior of several plants in the Arboretum, they flower only on alternate years. Last spring the largest specimen in the Peters' Hill group was covered with flowers; this year it has not produced a single flower-bud. The plant on the southern slope of Bussey Hill and a younger one in the group on the left hand side of the Forest Hills Road are now covered with flowers and are objects of interest and beauty.

CYCLAMENS UNDISTURBED FOR YEARS.

Says a writer in one of the English magazines: The war was the cause of gardeners not carrying out many of their usual practices, adopting fresh methods, and making new discoveries. One such discovery in my case was how remarkably well *Cyclamen* plants will do without the annual shaking out and repotting. Top-dressing also was not done, and the only help given was a few waterings of weak manure-water. I am growing the same plants on again this year untouched, but can discern a lessening in quality and

flowering. Where help is at any time none too plentiful a discovery like the above is a boon, and most satisfactory results can be expected should the plants be left but two or three years without repotting. The plants referred to were allowed to come along quite naturally, being kept in a cold frame until the beginning of December each year, then stood on a shelf in a slightly-heated plant-house.

Christian Hansen, of C. Hansen & Sons, the noted seed growers of Copenhagen, Denmark, spent the week end of May 20th with Howard M. Earl at Pine Tree Farm, Doylestown, Pa. Mr. Hansen has been making a tour of the United States for the past four months, and is returning to Europe on the S S Stockholm sailing from New York June 5th.

NEW BOOKS.

"Stories of Luther Burbank and His Plant School." Charles Scribner & Sons, New York City. Price 80 cents.

This book presents a new way of featuring Luther Burbank and his work. It deals with many of Mr. Burbank's creations and in such a simple way that children of tender years can understand it. Truth to tell, though, the most entertaining chapter in the book is one that deals not with flowers but with Mr. Burbank's little Japanese dog, Jumbo. There are many good illustrations, and no doubt the book will help to interest children in horticultural matters. One is led to wonder, though, why it is that so few of the flowers and fruits described are ever seen, at least in the eastern states. Perhaps it is because most of them are too tender for cultivation here.

This is a good time to pot up new growths of Lycaste, now that the flowering season is over and new growth starting. However, it is only once in two or three years that these orchids need repotting. The plants grow well in equal parts of fern fibre and fibrous loam, and they should have plenty of water, not being allowed to become too dry even during the resting season. There should be no lack of drainage, and pots or pans half filled with clean broken crocks are often recommended for them. During the summer keep them in a cool north house. Probably the old Lycaste skinneri is the best bloomer of all, but L. Cruenta and Harrisoniae are good.

The single stemmed chrysanthemum can be potted up to advantage up to the first week in June. It is especially desirable to do the work now if plants are to be grown for six-inch pots. The cuttings must never be allowed to show signs of wilting, either from lack of moisture or lack of proper shade. Sometimes cutting bench fungus causes considerable trouble so that it is wise to change the sand of these cuttings. When rooted give them 2½-inch pots, shifting to 4-inch and then to 6-inch pots. The plants should not be allowed to become pot bound at any time until the last shift has been made. In their final pots the plants should have a rich compost with one-third well rotted cow manure and a good sprinkling of bone dust. Syringe the plants several times a day, and likewise water them at the roots daily. A bench with side ventilation is a good place for young plants during the summer.

If you are growing Nerines and find the foliage has a yellow tint you should lay the pots on their sides on an elevated piece of ground where they will not get much water, for this changing color indicates that they are completing their growth. They may be allowed to rest until the middle of September, when they should be

moved into a frame or cool green-
house. After final growth has been
made give them an abundance of water,
with overhead syringing, and when
the flower scapes make their appear-
ance, remove an inch of the surface
from the pots and give a good top
dressing of rich compost. A weekly
application of liquid manure will also
be beneficial. You cannot expect to
grow good Nerines unless you keep
the foliage free from insects by con-
stant syringing. A greenhouse with a
night temperature of from 55 to 60
suits the plants well.

This is a good time to increase Fic-
us plants by mossing. The operation
is simple enough and can be done rap-
idly after a little experience. Choose
six or eight inches of leafy tops and
cut them half way through. Then
split the stems possibly half an inch
and in an upward direction. A match
or toothpick may then be inserted to
keep the wound open. Then bind
enough sphagnum moss around the
cut so as to form a ball two or three
inches in diameter. Keep the moss
moist at all times, but have the plants
themselves rather on the dry side.
In six or eight weeks roots will have
filled the moss balls, and the upper
part of the plants may be cut off and
potted up. Keep them in a moist
house, but one where there is abund-
ant moisture in the atmosphere. This
is a good way to make use of all the
lanky and unsalable plants.

If you are growing *Dracaena indi-*
visa, remember that the stock needs
a fairly close and warm house. Do
not let the temperature go below 60
at night, but in June you can plant
outside all plants which are over a
year old. They will make good growth
in the open air, and by September
can be potted up for next spring's
sales. Plants started from seed the
first year should be ready now in 3-
inch pots. Grow them in a compost
of three parts loam and one part well
decayed cow manure, with a sprink-
ling of sharp sand. These plants
should be kept inside during the sum-
mer, and given a good syringing every
morning.

DISBUDDING AND FORCING DAHLIAS.

Many amateurs desire the largest and finest quality Dahlia blossoms obtainable, so the following may prove of value to both amateurs and professionals.

To obtain the largest and most perfect flowers, only the best and largest buds should be allowed to mature; the others should be removed, enabling the full strength to develop the most promising buds into exhibition blooms.

Some varieties of Dahlias require thinning and disbudding, to produce the best flowers. Varieties having an excessive amount of foliage and small growth should have a considerable part of their branches removed, while those having more buds than can be properly developed or matured should be disbudded. The operation in no way endangers the plants and anyone can do it. Thin and disbud if necessary, moderately or severely as conditions seem to require.

Taking a budded stalk or branch, you will find the large or first bud on the stalk, and also, that at each leaf all the way down the stalk new shoots or bud stalks form; these in turn produce buds and flowering stalks, which over-top the first bud. The first bud on every stalk is always the largest and produces the largest and best flowers, ordinarily. Before the first flower is in full blossom, the first two side shoots have formed buds and burst into flowers. These in turn become passe to be replaced by flowering stalks from the set next below, or the second pair of side shoots.

On most varieties the first flower has a short stem, we disbud to lengthen the stem and to secure larger flowers. The proper way to disbud; when the first bud is small, the first pair of side shots should be removed with a sharp knife. This forces all the plant life that ordinarily would have developed the first two side shoots, into the first bud, making the first flower much larger and giving it a better stem. Removing the first set of buds forces ahead the second set and they in turn burst into flower. As you cut and remove the flowers, your plants send forth new flowering stalks from the bottom of the plant; the more you cut the more flowers will grow.

win Tulips, 1st Ed. Harris. 12 mixed Darwin Tulips, 1st Ed. Harris. Cultural Certificate was awarded to Jos. Winsock for a fine plant of Calceolaria. The Tulip Show will be held in Pembroke Hall on Wed. May 26th at 7 P. M.

It was decided to hold the rose show about June the 15th but owing to the late season no definite date was decided on. An interesting feature

of the meeting was an open discussion on the damage done to trees and shrubs last winter. Mr. Reed of New York gave us a short talk. Exhibits for June 9th meeting will be 12 mixed H. T. Roses 3 Head of Lettuce, 12 mushrooms.

Mr. Popp, special for assistant gardeners, best decorated basket of flowers.

ARTHUR COOK, Cor. Secy.

ISLIP GARDEN CLUB.

Islip, Long Island, N. Y.

The regular monthly meeting of this society was held in Town Hall on Friday evening, May 7th, about thirty members being present with President Robert Lickman in the chair. The exhibition committee presented a schedule for the fourth annual show to be held in September. The secretary also announced that three cups had been promised the committee for competition at this exhibition.

Prizes for the evening's exhibit were awarded as follows: Asparagus 1st Frank Tuma, 2nd John Machacek. Rhubarb 1st John Machacek, 2nd D. H. Overton. Lettuce 1st John Machacek, 2nd Robert Lickman. Narcissus 1st John Kroupa 2nd Joseph Lee. Tulips 1st Robert Lickman. The judges also awarded to Joseph Wood a cultural certificate for a vase of well grown Halley Gladiolus, and award of merit for a new seedling antirrhinum this was well grown and a credit to the raiser. The judges for the evening were Henry Groom, Karl S. Landolt and Henry Rawlinson.

TELEGRAPHING ORDERS IN A RECIPROCAL MANNER.

Boston, Mass.

Have you felt the importance of delivering a telegraphic order to the patron in your city. If you put it up with a bit of personal attention, you have the possibility at least of creating a new customer permanently.

Do you appreciate also that a department store figures every customer that enters their doors costs them in the neighborhood of \$3.12 just to get them in. Now, here is another channel of new business that not only gives you entre, but also gives you a possible customer.

Give your telegraphic orders as well as your own orders every attention possible. It pays.

PENN the Florist.

THE WESTCHESTER AND FAIRFIELD HORTICULTURAL SOCIETY.

Greenwich, Conn.

The regular monthly meeting of this society was held in Greenwich, Conn., Friday evening, May 14. There was a good attendance with Pres. John Andrews in the chair. Two honorary members were elected and three proposals for membership received. Various subjects were discussed, but the principal speaker of the evening was M. C. Ebel, secretary of the National Association of Gardeners. For two hours he kept the members' attention, describing the working of the Association Service bureau and giving hints about the betterment of the gardener's position. Mr. Ebel is doing Herculean work for the gardening profession. It would be a good idea for the gardeners to get up some kind of a testimonial to show our appreciation. There was a fine display of plants, flowers and vegetables.

JACK CONWAY, Cor. Sec.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Without doubt *Azalea Vaseyi* is one of the loveliest shrubs for spring blooming. It has become well established in the Arnold Arboretum, and has been blooming very freely this season in the parkway between Boston and Jamaica Plain. As seen through the other shrubbery on the banks of streams it presents a strikingly beautiful picture, the soft pink flowers being matched in color by few other blooms. It is a native species that might well become much better known, and it lends itself splendidly to cultivation, becoming more spread-

ing in character than when growing wild in its original Carolina mountains. At the same time it retains its slender, graceful habit of growth, and its spring beauty is rivaled by its fall display when the leaves turn a deep, dark crimson.

This *Azalea* was discovered in 1878, and was introduced, I understand, by Harlan P. Kelsey, of Salem, who owns the Highland Nurseries, of North Carolina. Mr. Kelsey has done garden lovers a service by getting these plants into cultivation, and of course, other nurserymen have taken them up

I find, for example, that *Azalea Vaseyi* is featured in a special and very showy catalogue issued by Hicks, of Long Island, under the title of "Feast of Flowers." A full page cut in color gives a good idea of the plant's value.

The people of Missouri and adjoining states are very fortunate in having the Missouri Botanical Gardens, at St. Louis, to help them with their horticultural problems. It is a magnificent institution, splendidly conducted, and of constant service to all garden makers, professional and amateur. It is constantly disseminating information of value to greenhouse men, including the growers of orchids and other tender plants, and yet does not neglect the man with the small home garden. Its bulletins are mines of helpful sug-

gestions, and often illustrated by photographs seldom seen elsewhere. I am led to write these words, because I have before me a copy of the bulletin for April which contains a long list of native plants suitable for the gardens of Missouri and nearby states. The particular list featured in this issue deals with plants which will grow in the water, in marshy places, or wet soil. The list is a long one and includes both trees, shrubs and perennials. This information should be very helpful to landscape architects and gardeners. In the same issue is a list

of woody vines and climbers suitable for covering unsightly objects and for adding graceful touches to natural plantations. Many other lists of plants for various situations have been published in other numbers, so that the file of the Missouri Botanical Garden Bulletins is little less than an exhaustive encyclopaedia.

If the city of Minneapolis did not have one of the finest public park systems in the country it would hardly be in a position to issue a report such as that which has just come to my desk.

It is a splendidly illustrated, handsomely bound volume, issued by the Board of Park Commissioners, and covering the activities of 1919. Of course, the city is specially fortunate in having a man like Theodore Wirth for its park superintendent, for Mr. Wirth stands among the ablest men of the country in his profession. It is due largely to him that the Minneapolis park system has become famous from one end of the country to the other, and is commented upon with enthusiastic commendation by every visitor to the city. Anybody who is interested at all in park work should have a copy of this report.

Let us all hope that the gardens of Greater Boston will be on their best behavior the latter part of June when the Garden Club of America meets at Manchester, Mass., for on that occasion scores of women who are familiar with the best gardens of the country will be eager to see what this section has to offer. I understand that the club is planning a visit to the Arnold Arboretum, Thursday, July 1. I suspect that as a matter of fact the Arboretum is one of the attractions which drew the members to Boston this year. It is rather unfortunate that they did not have their convention a month earlier, so that they might have seen the lilacs at their best, but as it is there will be much of beauty in the Arboretum to charm and delight the visitors.

Tomorrow, May 30, will be observed as Lilac Sunday at the Arnold Arboretum, which will mean the gathering there of thousands of people provided the weather is favorable.

The cold wet spring delayed the opening of the flowers but the early days of June will see the general Lilac collection at its best. The large part of the Arboretum collection consists of seedling varieties of the plant which has been a favorite in gardens for centuries, and to most persons the only Lilac—the *Syringa vulgaris* of botanists. It is now known that this shrub came originally from the mountains of Bulgaria and that it reached western Europe by the way of Constantinople in

1597. The date of its introduction into the United States is not known, but it was a common garden plant here before the end of the eighteenth century and may have been here much earlier. There are specimens in the collection raised a few years ago from seeds of the wild Bulgarian plants. These are interesting because it is possible by comparing them with modern Lilacs to see the changes three centuries of selection and cultivation have made in these plants.

Hardly a week passes without a letter addressed to the Arboretum asking for the names of the best, or of the best six or of the best twenty-five Lilacs. There are now one hundred and fifty named forms of the common Lilac in the collection. They are all or nearly all handsome plants, and no two persons ever agree about their individual value. Some persons prefer flowers of one color and other persons prefer flowers of another color; some persons like the Lilacs with double flowers and others detest them.

All the farms of the garden Lilac have practically the same habit and foliage, and the same inconspicuous fruit; they all bloom freely nearly every year, and breeding and selection have not affected their perfume as it has that of so many much "improved" plants, like many of the modern Roses. There is considerable variation in the size of the individual flowers; the double flowers open generally a little later than the single flowers and last longer, but there is really little difference in the time of flowering of all these plants. The size of the flower-cluster varies somewhat on the different forms; it is larger on young plants than on old ones, and it can always be enlarged by severe pruning which increases the vigor of the flower-bearing branches. Choice therefore depends on color, and really none of these Lilacs are "best" for everybody; one color or one shade is "best" for one person and another color or another shade is "best" for another person. Many persons who visit the Arboretum find the old Lilacs which have been growing on Bussey Hill for nearly a hundred years more beautiful than any of Lemoine's recent creations because they are the Lilacs which have long been common in old New England gardens and beloved by generations of New Englanders. A choice of Lilacs being largely a matter of taste in color or of association, it is useless to ask the Arboretum to make selections for its correspondents. If persons want Lilacs their only way to go about getting them in an intelligent way is to visit the Arboretum personally.

EARLY AZALEAS.

The first Azalea to open its flowers this spring is the Korean Rhododendron (all Azaleas are now called Rhododendrons) poukhanense. This Azalea, which is a common plant on the bare mountain slopes in the neighborhood of Seoul, was first raised at the Arnold Arboretum in 1905 from seeds collected in Korea by Mr. J. G. Jack. As it grows here this Azalea is a low, wide, compact bush which never fails to cover itself with its large, rose-pink flowers. Some persons do not find this color pleasing, but the flowers of no other Azalea in the collection have such a strong and pleasant fragrance. The plants ripen good crops of seeds; the seedlings are not difficult to raise and there is no reason why this plant should not be more common in gardens than it is at present.

The flower-buds of Rhododendron (Azalea) Schlippenbachii open a few days later than those of *R. poukhanense*. This Azalea grows on the exposed grass-covered cliffs of the east coast of Korea as a low bush with branches clinging to the ground and far northward as a tall shrub sometimes twelve or fifteen feet high under trees in open or dense forests. It grows further north than other Asiatic Azaleas, and only the North American *Rhodora* reaches a higher latitude. The flowers of this Azalea appear before the leaves and are pale pink marked at the base of the upper lobes of the corolla with dark spots and are about three inches in diameter. There can be little doubt of the hardiness of this plant, for in Korea it grows to its largest size where the winter temperature often falls to 30 degrees below zero Fahrenheit; and in the Arboretum the flower-buds have not been injured by the low temperature of recent winters. There is every reason to believe therefore that it will be possible to cultivate *R. Schlippenbachii* anywhere in the northern states where the soil is not impregnated with lime. If this prediction proves true New England will be able to add to its gardens one of the most beautiful of all the Azaleas.

This plant, unfortunately, is still rare in gardens. Although known to Russian botanists as early as 1872, it did not reach England until twenty years later when the late J. H. Veitch sent to London a plant which he had found in a nursery garden near Tokyo. The plants in the Arboretum were raised from seeds brought by Mr. Jack from Korea, and at different times a few plants have reached this country from the Yokohama Nursery.

Fortunately Mr. Wilson during his

journey in Korea in 1917 secured a large quantity of the seeds of this Azalea; this has been widely distributed by the Arboretum in the United States and Europe and has produced several thousand plants. There is reason to hope, therefore, that this loveliest of the hardy Asiatic Azaleas will become a common inhabitant of northern gardens.

THE STAG'S-HORN SUMACH.

This species of *Rhus* succeeds well under a variety of conditions, says a writer in *Gardening Illustrated*, and grows satisfactorily even where there is a good deal of dust and dirt. Its chief attraction centres in its long, pinnate leaves. These, on naturally-grown plants, are usually from 15 inches to 18 inches long, but on vigorous specimens they often approach a length of 3 feet. Under ordinary circumstances it grows 8 feet to 15 feet high, although it may exceed a height of 20 feet, with a number of stiff, hairy, rather gaunt branches, each one crowned by a handsome head of leaves.

Male and female flowers are borne by different plants. Those of the male are greenish and less showy than in the female, which are borne many together in dense, erect panicles from the points of the shoots. The female flowers are small and the ovary is covered by short red hairs. During the process of seed formation the red colour becomes more intense, and the dense red erect panicles each 4 inches to 6 inches long, are very conspicuous amongst the leaves. In addition to the male and female plants there is a handsome cut-leaved form of each, known under the varietal name of *laciniata*. Both type and variety form excellent shrubs for planting in large beds of rich soil in order to obtain the largest possible leaves.

Each plant is confined to a single shoot, the result being leaves 3 feet or more in length and a foot wide. They are cut down as low as possible each year, and as soon as new shoots appear all except one are rubbed out. It is an exhaustive method of cultivation, and care should be taken to feed the plants liberally.

Propagation is easily effected by root-cuttings, sections 4 inches long and the thickness of a lead-pencil being suitable. *R. typhina* is a native of Eastern N. America, and has long been an occupant of gardens. Fortunately, it can be handled without leaving behind the poisonous effects connected with the handling of some species, particularly *R. Toxicodendron*, the Poison Ivy of Eastern N. America.

**Prinsepia Sinensis.**

The value of this handsome shrub becomes more and more apparent with the passing years. This Prinsepia is a perfectly hardy, vigorous and fast-growing shrub; the young leaves and the flowers have never been injured by spring frosts, and it can be said of it that it is the best contribution Mongolia has made to our gardens. Prinsepia sinensis has proved difficult to propagate, but two years ago it produced for the first time a little fruit and this seed has germinated. It is possible, too with skill and patience to increase this plant by cuttings, but until the Arnold Arboretum plants produce good crops of fruit Prinsepia sinensis will not be common in this country. If it could be obtained in sufficient quantities it would make a beautiful and impenetrable hedge as the stems and branches are armed with sharp spines.

Winter-flowering Witch Hazels.

The southern Missouri and Asiatic Witch Hazels have all flowered during the winter, but for some reason which it is not easy to explain their flowers opened five or six weeks later than in other years. Hamamelis mollis from central China is the handsomest of these plants and well deserves a place in winter gardens for its flowers with their large bright yellow petals and handsome leaves which in late autumn assume before falling brilliant shades of yellow. A Japanese species (H. incarnata), differing from all the other Witch Hazels in the dark red petals of its small flowers drooping on long stems, is a recent addition to the Arnold Arboretum collection and has flowered this winter for the first time. As a botanical curiosity it is interesting, but judged by the first flowers it has produced in America it has little to recommend it as a garden plant.

FLOWERS SCARCE IN LONDON

It is reported from across the water that London is very short of flowers and that high prices prohibit the adorning of homes with floral decorations. A dispatch from London says that the handsome homes of Belgravia and Mayfair districts which are traditionally renowned for their fresh flower decorations in spring, show this year a most denuded appearance. Many women have grown flowers and plants in their drawing rooms to combat the high prices of flowers, but their crops have not been sufficient to give their homes the appearance of other years

PROTECTING ROSES IN WINTER.

At Hillcrest we were fortunate in losing few of our roses last winter. As we hear that this was not the general experience we are glad to give our method. We first cover them with soil much as we do our raspberries. Over the soil we place the autumn leaves, then boughs of pine from our woods. These pine boughs were probably the reason for our success last winter, the spring of the boughs protected the roses from the heavy weight of the snow.

Some of our climbing roses grow on a cedar fence near a stone wall. With these we have formerly had trouble with the rodents. This year we covered them with fresh cedar boughs and none of the roses were gnawed, although our young fruit orchard suffered severely.

It seems now as if our shrubs and perennials were showing the benefit of the heavy snows, for the shrubs are in very full bloom and the perennials strong in coming up. In the winter we received a variety of annual flower seeds from Yuldersvki, South Africa. Of some of these we will later give an account. They were sown indoors in flats and were strong in coming up. A few of them have suffered a little from transplanting but not beyond recovery. We started them indoors as we want to collect their seeds for further planting.

M. R. CASE.

Hillcrest, Weston, Mass.
May 20th, 1920.

NEWS NOTES.

For the first time since the war the Public Gardens of Boston have been ablaze with tulips this spring. About 40,000 bulbs were set out last fall.

A new corporation is the Royal Fern Extension Corporation, Boston and Altamonte Springs, Fla., general nursery business; capital, \$450,000; incorporators, Edward W. Mitchell, Elsie MacKenzie, William L. Bly and Tressa M. Ready of Medford and Elmer Smith Bailey of Boston.

Little Ads. in our Classified Buyers' Directory bring big returns to both advertiser. Anything wanted by florists, gardeners, park and cemetery superintendents, etc., can be sold through this medium. Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species-names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of **HORTICULTURE** at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (Nephrolepis Victoria)

We take pleasure in offering this new and valuable variety of Nephrolepis. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

NATIONAL PUBLICITY CAMPAIGN.

The Publicity Fund is augmented this week by a cheque from the St. Louis Florists' Publicity Committee for \$434.70, equivalent to a further contribution of 25 per cent of money collected by the committee for publicity purposes. Altogether this makes \$1,205.70 contributed to the campaign this year by the St. Louis florists. Secretary J. J. Beneke writes that the committee is looking for a big increase to their fund this fall, which means further support to the National Campaign.

There are very many more communities which could give combined aid to our fund. Some of these are, of course, small in so far as the number of florists is concerned. But if only half a dozen florists would get together and make a joint subscription, it would be quite satisfactory and show a good feeling toward a movement designed only to benefit the trade.

The good results forthcoming from our campaign have excited the jealousy of other trades. A particular instance of this is found in "The Keystone" for May, a trade paper in the jewelry trade. In this number, occupying a full page, is a poetic effusion under the heading, "Say it with Jewelry," and illustrated with a picture supposedly showing the advantage of jewelry as a gift that is permanent over one of flowers, quickly perishable.

These jealous interests may pervert our slogan as they will, but "Say it with Flowers" was well conceived, and it cannot suffer as long as we keep on exploiting it. There has always been a "language of flowers," and flowers speak this language as nothing else in this world's goods can. Flowers are more than gifts, they are messengers entrusted with the sweetest messages possible of conveyance. In sickness, sorrow, and joy they speak—could anything else supplant them?

It is this sentiment that our publicity has been promoting. Flowers were never considered in this light as they are now. Look over our beautiful advertisements, which have appeared in the national magazines, and it must be admitted that they touch the sentimental side of their readers, they place flowers in a different category to that in which they have ordinarily figured. They excite a desire to pos-

ness or use flowers under conditions not previously considered, and they remind readers of forgetfulness in the matter of many little courtesies which go to make up the spice of life.

This has all along been the prime object of the campaign—to induce a greater and more intelligent use of flowers. And it is for this purpose that the support of florists has been asked, support which should enable us to finance the cost of this very necessary publicity. There is no getting away from the fact that the campaign is exerting a wonderful influence for our good, and it should be the absolute duty of every florist, no matter where located, to contribute to the fund whatever amount he can. As we have so often said, such a contribution is an investment pure and simple, and pays mighty good interest. Our committee is sorely in need of further funds to arrange for a vigorous continuance of the campaign, the best movement ever inaugurated in the florists' industry.

If you, reader, have not subscribed already, won't you favor the committee, and, incidentally yourself by sending a cheque to the secretary forthwith? Don't worry about the amount—you can send more later if you wish to do so.

PASSING OF FRANK L. GAY.

Frank L. Gay, one of the oldest and best known members of the Rhode Island Horticultural Society, and one of few survivors of those conducting business on Westminster street before the Civil War, is dead at Providence, from illness incidental to his advanced years. He was in his 89th year and had been in failing health for more than a year.

He was known throughout New England as one of the most successful growers and exhibitors of what are termed old-fashioned flowers, and was awarded numerous first prizes by the horticultural and county fair exhibitions for more than two-score years. He was prominent as judge and assistant at the exhibitions of the Rhode Island Horticultural Society and was frequently called to serve as judge at other agricultural and horticultural exhibits. In the days of the old State Fair at Narragansett Park, under the auspices of the Rhode Island Society for the Encouragement of Domestic Industry and Agriculture, he was assistant superintendent.

DEATH OF MAURICE FULD.

Well-Known Seedsman Passes Away Suddenly at His Home in New York.

The trade was shocked to hear last Saturday that Maurice Fuld, the well-known seedsman, had been found dead in his apartment in New York City. Mr. Fuld's robust appearance and general alertness had given promise of a long and busy life, so that his sudden passing away came as a great surprise. It was understood that death was due to hardening of the arteries.

Mr. Fuld was born in Germany about 45 years ago. After leaving school he entered the seed business and for some time was with a concern in Quedlinburg. Afterwards he was connected with a firm in the South of France for several years, specializing in perennials. Later he came to this country and was engaged in the seed business with different concerns in Boston, Philadelphia and New York. For several years he was manager for the W. W. Rawson Co. in Boston and made many acquaintances at that time. This was previous to the consolidation of the corporation which made the present Fottler, Fiske, Rawson Co. While with this firm he established a dahlia farm at Marblehead which attracted much attention and made a reputation for himself as a dahlia specialist. Later he went to Philadelphia and became connected with the H. F. Michell Company, where he began to get out the unique literature which won him considerable fame later on. After that he went to New York and after a short connection with the Knight & Struck Company went into business for himself. He had been gradually extending his business and his advertisements which appeared in the trade papers and ama-

teur press made him a conspicuous figure.

Mr. Fuld's advertising was always distinctive and for that matter his methods were such that his business became built up largely on his own personality. For several years he has conducted two magazines, *Flower Talks* and *Vegetable Talks*, which have been written entirely by himself and contained no advertising. Mr. Fuld was also well known as a lecturer and had appeared before many prominent organizations in and outside of the trade. It seems particularly unfortunate that he should be cut off at this time when he was just reaping the success of many years of effort.

THE FLOWER MARKET.

Weather conditions were against florists who had planned to make a ten strike with Peonies for Memorial Day, but their loss will be gained by the carnation growers. With peonies out of all the Eastern markets, carnations sold at a tremendous rate and at very good prices. A good supply of peonies of fine quality reached Boston on Tuesday, which brought less than one-half of what would have been the price a few days before. It was much the same in New York, and even in Philadelphia there were but few peonies which came in from local points and they did not appear until Saturday so they were hardly a factor in the market.

In Philadelphia, roses and other long-stemmed stock sold especially well. On the whole, Philadelphia showed a better Decoration Day business than has been the case in the past. All the wholesale concerns worked overtime for three or four days and on Sunday, and on Monday noon

closing was in order.

Of course Boston had a lively market on Saturday, and a lot of stock came in on Monday, but this was too late to be of much value. Further West, the Memorial Day business does not seem to have been as big a factor as in the East, although the evidences are that it is growing rapidly. This week the markets have been very dull as a matter of course, with plenty of stock and prices low. It is noted that Delphiniums are especially late this year; they were among the items missed for Memorial Day business.

GENERAL NEWS NOTES

Mr. T. E. Waters, of the Poehlmann Bros. Co., Chicago, recently addressed the Ladies' Garden Club of Minneapolis and St. Paul.

According to Mr. Hilmer V. Swenson, of the publicity department of the S. A. F., the demand for "Say it with Flowers" billboards is constantly growing.

The Gardeners' and Florists' Association, of Toronto, Ont., will hold no meetings during the summer months, the next regular session coming on Sept. 21.

The recent heavy hailstorm in the southwest did considerable damage to nurserymen and florists. The peony crop has suffered badly, as it was just getting ready for market. It is reported that the Wilde Bros. Nursery Co., of Sarcoxie, Mo., lost its entire peony cut flower crop.

The 10,000 tulip bulbs given to the city of New York by John Scheepers and planted in the New York Botanical garden, have been making a fine display this spring, and have attracted much attention, as they included many unusual varieties among the 130 kinds shown.

JUNE 5, 1920

No. 23

THE TALK OF THE TRADE

I think I am safe in saying that there never has been a time in the history of the florist business when flowers received such a boost as during this memorial season just passed. The press, governors of states, mayors of cities and others in the public eye have shown plainly their appreciation of flowers and in many ways have urged their use and done a great deal to strengthen the appreciation of flowers by the public and to show their appropriateness at this season especially.

Reports from all sections indicate that the Memorial Day just passed was the largest ever. While many were very optimistic, still there was an undercurrent of feeling that too many artificial flowers would be used and that this would work against natural stock. There is no question that artificial stock was used in greater quantities than ever, but the natural flowers certainly held their place and the markets in general showed a good clean-up and at good prices. True it is that Monday morning cut stock lagged below the prices of Saturday, but even so, the average selling figures were good, and I can't see where there can be any complaint from anyone as to Memorial Day business.

I am not able to say anything about the market on Monday in other cities outside of Boston, but I must say that I was very much surprised at the quantity of stock which came in Monday morning, and further than that I am more surprised to find that there are still some florists who will hold back stock until the very last minute and then expect to make a fine clean-up at big prices. I know of one salesman in particular who tried to find out from his growers as early as Wednesday in the week what was left at the greenhouses to come in for Thursday, Friday and Saturday. He was led to expect only a small quantity of stock, but when Saturday came along there was more than he expected, and Monday a big shipment came along, and what was worse, a lot of this stock was in poor condition. This stock had been

held back and it made a lot of trouble for the salesman and resulted in low sales, and as a matter of fact a lot of held-over stock for Tuesday morning. Take for instance gladiolus, not only the large-flowered varieties but the Colvelli type; this stock would all have cleaned up fine, but to hold it until Monday morning was simply wasting it. There may be some explanations for shipments increasing at the last minute, but it is hard to explain, particularly when you find stock held over and in poor condition. We have been waiting a long, long while for this condition to be overcome, but it doesn't seem possible to get away from it entirely.

In speaking of *Primula malacoides* in a previous issue, I mentioned *Malacoides Townsendi* as a particularly valuable sort, but this has been impressed more forcibly upon my mind during the past week as I have learned that this variety is being grown in greater quantities this season than before. To my mind, it is the best of

the *malacoides*, and growers handling this type of primula should see to it that they have good stock. President Miller of the S. A. F. is certainly a good judge of pot plants, particularly those that are in favor in the New York market, and I remember last year how well he spoke of *Townsendi* and marveled that even with the quantities grown there were not greater numbers handled.

A subscription dinner is to be given in honor of Charles H. Totty of Madison, N. J., at Mouquin's restaurant, New York City, on Saturday evening, June 5th, when his friends will wish him Godspeed on his trip to Europe. Mr. Totty is planning quite an extended trip abroad and his many friends in the trade await with interest his report of conditions and of the new things he is sure to dig up while he is over there. We all wish him a pleasant and prosperous trip, and await the time when we may welcome him back with us.

I have mentioned before, but I think it will bear repeating that in planting

Chrysolora, a Popular "Mum"

chrysanthemums for this season, go easy on plants of the midseason varieties. I prophesy heavy planting of stock, and I believe that market conditions will prove that I am right when we get into October this coming season. Plant heavy on the very early and the late varieties. Pompons as usual will be in good supply, but again you will find it true that the early and the late are the good paying ones, particularly the very early.

Well-grown Golden Glow is always good property if not brought in too early. Last of August and the early part of September are a little too early generally for blooms of Golden Glow, but around October 1st they bring a good price. Stock of this variety, however, seems to be unusually scarce, due to the fact that it does not winter over well and a large quantity of stock plants were lost through having been winter killed in the frames on account of the severe winter and long space of time that they were covered by the snow and in complete darkness.

Seidewitz is a variety that will do very well for one of the early yellows. This sort planted early and kept growing gives good results. This variety turns out a good presentation of marketable blooms, and is one that can usually be depended upon for a good paying crop.

When writing to advertisers kindly mention **HORTICULTURE**

A year ago Henry Penn, of Boston, won many compliments by using his advertising space to call the attention of the public to the tulips in the public parks of Boston. This year he used a large advertisement in the Boston Post to speak of the lilacs and other flowers in bloom at the Arnold Arboretum, with the result that hundreds of people were attracted to that beauty spot on Memorial Day. In this advertisement Mr. Penn made no mention of his own business, but it is safe to say that the money spent was not wasted. People appreciate this kind of public spirit, and have a kind thought for the man who exercises it.

SHAKESPEARE GARDENS.

It seems that Shakespeare gardens are still being considered here and there, in spite of the fact that they have not always worked out as successfully as might have been hoped. The fact is that it is very difficult to get together such plants as were actually grown at the time of Elizabeth, and if the collection is not accurate the visitor is of course really misled. A writer of the Gardener's Chronicle considers, for example the matter of pansies, and asks what kind of pansies it is proposed to plant in the Shakespeare garden. Of course, the truth is that the pansies of today are very different from those of the poet's day. Twentieth century specimens will not accurately illustrate those grown in the 16th-17th centuries. This writer then goes on to say:

"I stood side by side with a young infantry soldier and his lady friend in the Rotunda at Woolwich; they were examining with some amount of curiosity the section of a shrapnel shell, the bullets of which were packed as closely as berries in a bunch of grapes. 'That,' said the young soldier, 'is what they call grapeshot.' As an old Artillery Volunteer I walked away and smiled. So it will be with some of the occupants of this new Shakespeare garden, unless considerable supervision is exercised. Fancy the budding amateur florist, the uninitiated tourist or the man in the street gazing upon some very fine specimens of modern garden Pansies—say, for instance, some of the Odier, Trimardeau, or Sutton's Mammoth strain, and thinking they were replicas of the flowers contemporary with the great poet of Stratford-on-Avon!

Well might Ophelia say—

And there is Pansies, that's for thoughts."

Worth While Primulas

Malacoides Rohrerl. The best strain of Malacoides on the market. Years of patience have developed it to perfection. The beautiful shades of Rose Pink, Light Lavender and Snow White make it one of the most desirable and profitable plants to grow, not only as single plants, but for combination work it cannot be excelled. 100 1000

George Watson's Corner

"You in your small corner and me
in mine."

The newly born Iris Society is fortunate in having secured a good live secretary. Robert S. Sturtevant, the well known landscape architect of Wellesly Farms, Mass., is a man of high distinction in two continents who knows and loves the Iris and has made it his hobby. Let us all turn in and help him, the least we can do is to join the association and become more educated in the fine points of this wonderful genus, which needs only more knowledge to advance it in popular appreciation.

A field for that seems open in the way of making it an all the year round flower like the rose if the experts will get busy in retarding, storing, cultivating the various species suitable for cut flowers. There should be money in it as well as fame for the grower and it would all tend to the glory of the Iris in public estimation.

Fiddlesticks! That was a fine word used by Max Schling in reply to Anna Jarvis. It expressed the feeling of the multitude of common sense people in one word. Great! We extend our thanks and congratulations. Some of those crazy fanatics who call themselves efficiency experts may think that a word of four letters like Rats or even one of three letters like Bah would have been an improvement in these days when print paper is so scarce and the typesetter is a Mogul, but for us Fiddlesticks fills the bill and leaves a nice warm feeling behind it. Some like it neat and straight; but the seltzer the lemon and the peppermint and the straw kind of adds artistic verisimilitude and we are willing to pay the difference.

GARDENERS' CONVENTION.

The date for the annual convention of the National Association of Gardeners has been set for September 14, 15, 16, at St. Louis.

The Marquette Hotel has been selected as the headquarters and meeting place of the convention, and the following committee is in charge of the local arrangements: Program, George H. Pring; Reception, Hugo Schaff; Entertainment, Ernst Streble; Decoration, John Moritz; Publicity, Prof. H. C. Irish.

This year's convention of the national association will be the most important in its history, as several matters which will have much bearing on the future of the gardening profession, will be presented to the convention for consideration. The subject of examination and classification for gardeners, which was referred by the Cleveland convention to the next convention, will be submitted for final action.

As the convention of the American Association of Park Superintendents will be held in Louisville on September 9, 10, 11, a good attendance is looked for at both conventions as many members are affiliated with the two associations. The dates have been arranged so that members may attend both meetings.

The following country estate owners have recently subscribed as sustaining members of the National Association of Gardeners: W. R. Coe, Oyster Bay, L. I.; J. Pierpont Morgan, Mrs. J. Pierpont Morgan, Glen Cove, L. I.; E. H. Inman, Atlanta, Ga.; F. M. Sackett, Louisville, Ky.; H. E. Converse, Marion, Mass.; Mrs. C. G. Rice, Ipswich, Mass.; Mrs. W. Stursberg, Great Neck, L. I.; W. E. Kimball, Glen Cove, L. I.; E. F. Price, Port Chester, N. Y.; A. C. Loring, Mound, Minn.

Mr. Henry T. May, gardener on Miss Bradley's estate, Hingham, Mass., is leaving July 1st to accept a similar position in Springfield, O.

CHARLES SCHOENHUT.

Charles Schoenhut, a prominent florist of Buffalo, is Dead at His Home on Blaine Street.

Mr. Schoenhut was born in Germany about 50 years ago and came to this country when a boy. For the past 20 years he conducted the flower shop in William street. He also conducted the Schoenhut nurseries at Garden-ville.

Mr. Schoenhut was a member of Modestia Lodge, F. & A. M.; Buffalo Con-sistory, Elks, Eagles, Orioles, the Borea Club, East Side Business Men's Association and the Florists' Club.

Mr. Schoenhut is survived by his wife, Emma, Schoenhut, his mother, a brother, Albert Schoenhut, and four sisters, Matildia Schoenhut, Mrs. Bertha Korn, Mrs. Julia Kraft and Mrs. Amelia Reynolds.

Entered as second-class matter December 3, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Take the country as a whole and Memorial Day was not as great a success from a financial standpoint of the florists as might have been hoped. With many florists Mothers' Day brought in a much larger amount of money. At the best, Memorial Day is an uncertain quantity. If the season happens to be of such a character as to bring into bloom a large amount of outdoor material the last of May, it is obvious that the florist is going to find his business reduced. That was the case, especially in New England this season. Lilacs were in full bloom and in great quantities. They were used to an almost unprecedented extent. In other places peonies from private gardens were available. On the other hand, many professional growers in the southwest who had expected to market great quantities of peony blooms on Memorial Day had their crops and their hopes ruined simultaneously by the recent severe hailstorm.

Florists who have an exclusive city trade often find Memorial Day hardly as profitable as a good Saturday under ordinary conditions. On the other hand, florists who are situated in close proximity to cemeteries and those in suburban sections find the day one of great activity and consequent profit, although it must be said that the floral pieces made up for the Memorial Day trade are seldom pretentious, and consequently sell for comparatively low prices.

New England seems to have developed the Memorial Day business to a greater extent than many other parts of the country. The Boston markets were cleaned up well and at fair prices on Saturday, but perhaps the story would have been a little different if the material which came in on Monday morning had arrived when it should have done so. Of course the Monday offerings were not in great demand, as most of the buying had been done. Growers who held their stock had to see the price cut almost in half. One feature of Memorial Day this year was the tremendous use

made of artificial flowers, wreaths and the like. This line of business has developed with surprising rapidity, and a large part of the Memorial Day investment went into this sort of material.

The Cleveland Florists' Club will hold its Cleveland next meeting June 6, at the Hollenden, and Convention considerable attention will be given to the S. A. F. Convention. Members of the Cleveland club realize that they have a big task on their hands in preparing for the convention, but are settling down to work in good earnest. No one can doubt that they will prove to be hospitable hosts, and that they will live up to the reputation which the trade in Cleveland has always possessed for being alert, enterprising and warm hearted. All the signs point to a big and successful convention in the lake city.

It is good news that the Massachusetts Horticultural Society has planned for a big Rose Show Shows next spring. The success of the Orchid Show this season demonstrated the ability of the Society to put over an event of this kind in a manner calculated to attract international comment. There is every reason to believe that the American Rose Society will co-operate in making the event a success. That fact is being counted upon, no doubt, and the members of the Rose Society are alert to every opportunity for increasing the interest of the public in their special flower.

Within the past few weeks the trade has been Faces robbed of several of its prominent members, in Missed the passing of Maurice Fuld, Patrick O'Mara and Charles Schoenhut. The tributes published elsewhere show the high esteem in which Mr. O'Mara was held. He was indeed one of the most able men in the trade and one of the finest orators who has ever been heard at the S. A. F. conventions. His work was always of the cleanest and highest type, and he had the respect of everybody who knew him, both in a business and social way.

Mr. Fuld's unique personality stamped itself upon everything which he did, and he set a pace in the matter of advertising copy and catalogue literature which has done much to work a revolution in the business. He will be missed not only in the trade but also among thousands of amateurs who had become familiar with his work through his writings and his lectures.

While Mr. Schoenhut of Buffalo had not such a conspicuous place in National affairs, he was known in force in his own community and his loss also will be deeply felt.

It is doubtful if prices for flowers will come Price back again to the heights which they reached Outlook during the winter, at least until another winter season rolls around. The outlook for June weddings is by no means roseate. This is due to the fact that the high cost of living has brought about a disposition to postpone the happy event until prices tumble a little, and even when the weddings take place they are in most cases of a quiet nature and the florist has no part in them. Without being pessimistic, it is necessary to say that all the signs point to considerably lower returns all along the line for the next few months.

ASIATIC CRABAPPLES

The flowers of these trees are unusually late this spring, but unless the weather continues exceptionally wet and cold there will be open flowers on at least a few species by the 17th, and many others will be in full bloom by the 22nd or 23rd of the month. The flowers of these trees make one of the principal spectacular displays of the year in the Arboretum, and only that made by the Lilacs attracts a larger number of visitors. Most of the trees are well covered by buds, but there will be no flowers on a few individuals, including the plant of *Malus floribunda* at the foot of the bank on the left hand side of the Forest Hills drive.

This is unusual for *Malus floribunda* rarely fails in May to excite admiration by its countless thousands of deep rose-colored flower-buds and white petals. Other trees of this Crabapple in the Arboretum will flower this year as usual, and the tree of *Malus arnoldiana*, a hybrid of *Malus floribunda* and an even more beautiful plant, in the group on the Forest Hills Roads which did not flower last year, is now covered with flower-buds. For forty years the Arboretum has been engaged in forming this collection of Crabapples in which are now found all the American and Asiatic species, many distinct varieties of the species and a number of hybrids. It still lacks, however, the wild type of the species of western Europe (*Malus sylvestris*) which it has not been possible to find. This is unfortunate for this Crabapple has played a more or less important part in the development of the cultivated Apple-trees of orchards.

The Crabapples in the Arboretum hybridize freely among themselves and it is useless to plant seeds gathered from these trees with the expectation that they will reproduce the plants from which they were gathered. The seedling trees may prove worthless or they may be superior to any of the Crabapples now cultivated. The characters of any species, variety or hybrid can be preserved in its descendants only by means of grafting or budding; and it is for this reason that many of the handsome plants in the Arboretum collection are still rare in other collections. For those fortunate persons to whom the beauty of a plant means more than its identity and correct name Crabapples raised from seeds gathered in collections like that of the Arboretum might be recommended, but such seedlings will require names to make them salable and gardeners' names for plants of doubtful parentage

We are Headquarters for the BEST OF EVERYTHING IN VEGETABLE SEEDS

will only add to the perplexities of the students of cultivated plants. Stock plants raised by grafts from correctly named individuals would in the hands of a few competent nurserymen supply in time the country with correctly named Crabapples and save planters much loss of time.

The eastern form of *Malus baccata* (var. *mandshurica*), a native of Manchuria, Korea and northern Japan, is again the first plant in the collection to open its flowers. This as it grows in the Arboretum is a bush-like tree about fifteen feet tall and broad; the flowers are white, an inch in diameter, and more fragrant than those of any other Apple-tree in the collection. The fruit is yellow or red and not much larger than a pea. The delightful fragrance of its flowers is the chief attraction of this variety and makes it well worth a place in gardens. Almost as early to flower is *Malus micromalus*.

It was first sent to Europe from Japan in 1856 under the name of "Kaido," a name which in Japan has been given to another plant, and owing perhaps to this confusion of names very little has ever been heard of it in Europe or the United States. In Japan it has been seen only in gardens, and Japanese botanists have considered it a hybrid brought to their country from China. From other Crabapples it differs in its upright growing branches which make the tree conspicuous by its pyramidal habit. The flowers open from deep rose-colored buds and are pale pink and hardly more than half an inch in diameter, and are followed by small yellow fruits. The large specimens in the Peter's Hill Group are not flowering this year, but a small specimen recently planted on the left hand side of the Forest Hills Road is covered with flowers.—*Arnold Arboretum Bulletin*.

**Flowers Under
Glass**

Be sure that the sweet peas are kept well cultivated, and be especially careful to go through them the day after watering. This watering should be thorough and take place once or twice a week. When warmer weather comes it will be a good plan to mulch them so as to keep the soil cool and retain the moisture. Even mulched sweet peas will need plenty of water at the roots if dry weather comes on, for otherwise their growth will be checked. If they are not growing quite as fast as you think they should, apply a little nitrate of soda or wood ashes before watering.

Make sure that the lilies under glass do not suffer from lack of water, which means that you will have to examine the pots two or three times a day. Do not forget to give the plants an abundance of ventilation. When the flowers begin to open, go over them and remove the pollen, for otherwise the petals will be discolored. Probably some of the tallest kinds will need staking. Keep all the plants well syringed until the flowers begin to open. If you are growing *Lilium speciosum* and *grandiflorum* for summer flowering, they should not have overmuch shade until the buds begin to open. Then some shade will be an advantage. Above all, watch out for the green fly, because this pest does much damage, once it gets a start in the house. Proper ventilation is the way to keep it in check.

With the renewed interest which is being shown in gardenias, growers are giving more attention to these plants. You will find it advisable after removing the plants and old soil in the houses to very carefully wash the benches afterwards, giving them a heavy coating of hot lime. A good compost for gardenias consists of three parts fibrous loam, with one part well rotted cow manure and some clean sand. The more fibrous the loam is the better. Set the plants 15 or 16 inches apart, which will mean three rows on a 36-inch bench. The whole bench should be soaked after the plants have been put in, but after that it is only necessary to water the balls of the plants as needed, but be

sure that the plants never dry out. Do
not allow the plants to be out of the
pots long enough for the roots to dry
out, and when they are planted be
careful to thoroughly firm the soil well
around them. Then syringe freely on
all good days, under the boards as
well as on top.

As soon as potted Eucharis plants
have borne their crop, they can be
top dressed with cow manure and
loam, a little of the old soil being first
replaced with new compost. If they
have made heavy roots they will be
better for a shift, but it should not be
forgotten that they flower best when
pot bound. It is the best plan to place
the pots in a cool frame where they
can be plunged to their brim in a
mixture of strawy manure and leaves.
Shaded sash should be placed over
the plants. By the end of September
they will be ready for a house where
the temperature runs about 50 degrees
at night, and after a few weeks' rest
can be forced for the Christmas trade.

If you are growing young fuchsias
to flower later, make a point of regu-
larly pinching them. Runners of the
Boston Sword fern should be potted up
regularly and kept growing steadily.
This is a good time to repot young
palm stock and for making up Kentias
and Ericas.

Planting time for the roses is close
at hand, and with a scarcity of labor
it is necessary to get the houses into
shape as early as possible. Make a
resolution once more not to use any
poor plants. It never pays in the long
run. If your own plants are not good
enough, go into the market and buy
some that are.

PATRICK O'MARA.

A Touching Tribute from Mr. P. Welch
of Boston.

I find it hard to bring myself to believe that Patrick O'Mara has passed away. At the time of my last interview with him, which took place at his office in the Henderson store in 1917, just before the New York Convention of the S. A. F. I found him fighting with all his ability to eliminate all forms of amusement and entertainment from these annual gatherings.

Patrick O'Mara was a self-made man. He started to work at the age of ten years in the Henderson establishment, and, under the efficient tutelage of the late Peter Henderson, he acquired a remarkable knowledge of horticulture, a knowledge perhaps more thorough than he could have obtained in any college. His application to work, and the efficiency he displayed secured for him the highest possible position in the firm of Peter Henderson & Co.

Mr. O'Mara was blessed with a remarkable voice and with that admirable faculty of acquiring, and then holding, the close attention of any gathering or assembly which he addressed. His ability as a presiding officer, coupled with his knowledge of parliamentary law, made him a valuable asset to our horticultural clubs and societies, and made him a prominent figure in the work of advancing our profession to the position it occupies today.

He possessed a keen sense of humor, and was always prepared to tell a funny story, and furthermore, to listen to one told by somebody else. His jokes never had in them that tinge of sarcasm so readily recognizable in some stories, but on the contrary, were always rendered conspicuous by that warm-hearted friendliness that was a part of his nature.

I find that in the passing of Mr. O'Mara I have sustained a distinct personal loss, and I wish to express my appreciation of all his fine qualities and of his great work for the trade. My sympathy goes out to his business associates and relatives who grieve with us at his going.

FROM GEORGE WATSON.

John Westcott voices the sentiments of the trade when he says:

"In the death of Patrick O'Mara the trade has met with a severe loss and we, his brother florists, will miss him greatly. He was one of the brightest lights in our profession, and a hard worker all his life for its advancement. He was indeed a true friend to horti-

culture. Those who have known him intimately as I have done for many years will miss him for his genial personality and his steadfast helpful spirit. He was a man—true to the core, and we all loved him."

Yes, indeed, Patrick O'Mara was all of that! And then some. He was not only a great man and a great horticulturist but he was a wit and an ora-

tor and a statesman and a glorious old fighter for liberty and truth at the drop of the hat. One of the finest examples of his fighting qualities to my mind was when he went to California single handed and rooted out the overgrown poison-cactus Burbank and showed him up to the world as the biggest and most pernicious fake that ever fastened itself on an honest profession.

PEMBROKE'S CARNATIONS.

An Interesting Account of His Work
at Beverly.

It is pleasant to find the daily papers giving increased attention to the florist business and to florist themselves. The following appeared in a recent issue of the Salem, Mass., News:

"One of the largest carnation growers in this state is Aubrey A. Pembroke, a man who is becoming more and more known to greater Salemites, as he has recently bought the North street greenhouses and McGee & Geary's greenhouses on Crombie street. Coming here from England in 1906, Mr. Pembroke first worked for Mr. Gordon, a well known florist in this part of the state. In 1910 Mr. Pembroke started in the floral business for himself. Gradually he became more interested in carnation growing than in the growing of other flowers, and while he still grows quantities of geraniums, hydrangeas, lilies, and enough roses to make him one of the largest rose growers in this vicinity, yet his specialty is carnations. His largest carnation hot-houses are in North Beverly, and from these Mr. Pembroke picks between 2,000 and 3,000 carnations daily.

"So successful has he been with his carnations that at a carnation exhibition in Buffalo in 1915 he won 10 first prizes and eight seconds in 22 entries. All of these flowers had been grown in this state and were at least a week old before being exhibited. In Philadelphia, in 1916, he took six prizes in a carnation exhibition.

"Besides growing the more familiar kinds of carnation, Mr. Pembroke has grown some different from any heretofore. "Good Cheer," a large, light pink carnation, is one of his first specialties. "Elizabeth," a carnation which Mr. Pembroke named for his daughter, "Sensation," and the "Beverly" are others which he has developed. "Laddie" was first grown by Mr. Pembroke, but now florists in other parts of the country are growing it. There are some new kinds of carnations which Mr. Pembroke alone grows, but as yet these have not been put on the market.

Robert S. Sturtevant was also much in evidence at the Iris Show, being not only its secretary but an important exhibitor. He showed some very fine new varieties, such as: Rose Unique (Farr), Mrs. Alan Gray (Foster), Prestige (Sturtevant), Verbena (Wallace), Prosper Lauzier (Vilmorin), Syphax (Bliss), Zus (Crawford), Fryof, Dorothea, and other notable acquisitions.

HOUSE INSISTS ON FREE GARDEN SEED.

Washington.—There are 204 members of the House who do not want to dispense with their right to distribute free garden seed on the eve of a general election. With only 107 favoring the House declined to yield to the Senate on the Agricultural Appropriation bill, which is in conference after the House conferees had reported back that they were unable to reach an agreement on the Senate amendment.

Congressman Blanton, Democrat, Texas, moved to concur in the Senate amendment, which would strike out an appropriation of \$239,416 for the purchase and distribution of valuable seeds. He declared that when almost for the first time in memory the Senate desired to reduce rather than add to an appropriation, the House should not hold out against it. The Blanton motion was lost on a rollcall.

The Park Hill Flower Shop of Manchester, Mass., has been awarded the contract for supplying the city with potted plants. Many thousand geraniums are used in the cemeteries.

PHILADELPHIA.

Robert Craig is among us again after an absence of four months in the tropics. He arrived on the 25th ult. at New York and stayed there a few days to attend the last rites to Patrick O'Mara. He also brought us the sad news that Maurice Fuld had passed away on the 27th in that city. Mr. Fuld was well known in Philadelphia, having been connected with the Mitchell Co. for a number of years.

NEW ENGLAND

Mr. J. E. O'Donnell, formerly salesman for Thos. Roland, is now with the Dolansky-McDonald Co., in Winthrop Square, Boston.

W. D. Howard of Milford sent 32,000 carnations into the Boston Market for the Memorial Day trade. This was a record breaking shipment.

Yasse Bros. florists at 31 Washington street, Haverhill, suffered considerable damage by water in a recent fire.

Joseph N. Lipman is opening a new flower store at Manchester, Mass. It will be called the Manchester Flower Shop.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

It has been quite surprising to note the large number of exceedingly commendatory articles which have appeared in various publications about the Rose Annual for 1920. I do not mean to show any surprise on the ground that the book is not worthy of so much notice, but because as a matter of fact it is an uncommon thing for so many publications to give so much space to any book of this nature. When the Country Gentleman, for example, will publish a couple of columns about the Annual, it must indeed be considered as something quite out of the ordinary. Altogether the American Rose Society has come to be the leading organization of growers and enthusiasts in the country, and has set a lively pace for the Iris Society, the Peony Society, the Dahlia Society, the Gladiolus Society and the newly

formed Orchid Society. The members' handbook has just gone out from headquarters and includes a list of the members as well as other important matter. It is interesting to note that the membership list shows that in a geographic relation the society is represented in 45 states and 15 foreign countries. The handbook also announces a committee of consulting and advising rosarians to members of which inquiries may be addressed from time to time by members of the society.

I have been interested to read a note in the Gardener's Chronicle of London about a new plant which was sent to Kew Gardens from this continent. It seems that this plant was also sent to the Arnold Arboretum some years ago and has bloomed well this season. The

originator of the new plant, which has been called *Rhododendron Fraseri*, is Mr. G. Fraser, a nurseryman of Weluchet, Can. Mr. Fraser describes it as a hybrid between *Rhodora canadensis* and *Azalea mollis*. The plant seems to have made a good impression at Kew. Unless I am mistaken it is the first hybrid with the little early flowering *Rhodora* that has yet been reported. It seems as though the hybrid might have some value as a forcing plant, judging from its parentage. The description as obtained from across the water is as follows:

The plant has rather wiry, twiggy growth, smooth bark, and is deciduous. The new leaves, which come with the flowers, are about an inch long, ovate short petioled, hairy on both sides, and borne on shoots about three inches long. The flowers develop in terminal umbels, three to six in each, and have hairy green pedicels an inch long; calyx minute; petals in two series, three above, two below, united at the base, forming a tube $\frac{1}{4}$ inch long, the limb about two inches across, bright, rosy mauve; stamens ten, short; style

60	10 in.	.90	9.90	77.50
70	8 in.	.75	8.00	61.00

The Riverton Tub is sold exclusively by us, and is the best ever introduced. The neatest, lightest, and cheapest. Painted green and bound with electric-welded hoops. The four largest sizes are equipped with drop handles.

HENRY A. DREER, Seeds, Plants, Bulbs and Supplies, 714-716 Chestnut St., Philadelphia, Pa.

as long as the corolla, curved. There are many rhododendrons of the same stamp among the evergreen Chinese species, but the Japanese *R. rhombicum* is most like it in the shape and color of its flowers and in its deciduous habit; the leaves are, however, quite different. I can imagine *R. Fraseri* becoming a favorite garden shrub on account of its hardiness and earliness of flowering.

A suggestion which I find in one of the foreign papers may be of value right now, when the irises are coming into bloom. As everybody knows, June is often the month of heavy rains, which not infrequently cause the flowers, especially those of the early flowering kinds, like *Iris pumila*, to be badly bespattered with mud. It is pointed out that a very light dressing of cocoanut fibre or similar material placed on the ground between the varieties of irises would prevent this soiling of the delicate blooms. It seems to me that a material now commonly sold as an absorbent for use in poultry houses could be used advantageously in this way, and it would not be injurious if left on the ground, being considered in fact to have a certain amount of fertilizing value. It should be remembered that the proper time to transplant irises is immediately at the close of the flowering season, and at that time it will be helpful to mix a little sulphate of lime with the soil when setting out irises of the type which we used to call German, and which, as I understand, we are supposed to call *Fleur-de-lis*, that name being preferred to *Liberty Iris*, which some of the growers have hoped to introduce. No lime should be used for iris of the moisture loving type.

The many friends and acquaintances of Joseph Koppleman, the prominent Providence, R. I., florist are complimenting him upon his handsome new quarters on Custom House street. The new store is in Mr. Koppleman's own building, and is a credit to him and to the trade.

NEPONSET, BOSTON

BEGONIAS FROM NOVEMBER TO MARCH

Cuttings of *B. Gloire de Lorraine* and its variety *amabilis* are available by the month of April. Only those proceeding from the root-stalks should be used. The cuttings may be inserted in thumb pots, but I have found greater success in the use of ordinary cutting boxes, about 6 inches in depth. These should be well drained and half filled with fine sand and sifted leaf-mould in equal quantities, with a layer of silver sand on the top. Insert the cuttings firmly, give the soil a good watering and cover the box with a sheet of glass; afford shade from bright sunshine. This method has been found to produce excellent results, and a fine root system which is little damaged if intelligently handled when placing the young plants in 3-inch pots at the first potting, says a writer in the *Gardener's Chronicle*.

The compost for the first potting may be composed of one part loam, two parts "flaky" leaf-mould and sand.

I am convinced that the period between this and subsequent pottings is the critical stage in the cultivation of these Begonias.

Before experience taught me other methods I followed the general practice of providing an elevated stage for the young plants in the stove, watering, shading, and spraying in the usual way. The results were far from satisfactory. The young plants did not grow freely, and consequently were easy victims to rust and thrip. To those who have sufficient room in a propagating case I would recommend placing the young plants therein for a time, giving them care in watering. Failing these facilities here, a box 15 inches deep and of a length suitable to requirements was made. Herein the young plants are bedded to the depths of the pots in Sphagnum-moss. Sheets of glass are laid over the box, which is made so as to incline the glass a little, and this allows moisture to drain off easily at the sides and prevent "drip," which is so harmful to

the foliage of Begonias. In these conditions the plants grow strongly and make branched specimens by the time larger pots become necessary.

Anticipating this repotting by a day or two the glass should be removed from the box to allow the occupants to become accustomed to the less congenial atmosphere of the stove. For this potting 6-inch pots are used with special attention to the drainage. The potting soil we use is not a complex "mixture," and consists simply of loam, two parts—the best procurable—the soil sifted out and the fibre retained; leaf-soil or mould of Oak or Beech from the previous years' "fall," in a flaky condition, and clean sharp sand. This compost, while retaining moisture, never becomes sodden like other mixtures I have used. Potting is best done loosely; just sufficient pressure is needed to ensure that no spaces exist between the ball of the plant and the sides of the pot. The parts of the stove exposed to the strongest rays of the sun will have been lightly shaded by

this period. Hence, if the atmosphere of the house is kept warm and fully charged with moisture, the newly-potted Begonias will soon make good growth.

Watering must never be done carelessly, and special attention is required at this stage. While it is necessary to keep the whole ball of soil moist, it must never become wet. It were better to let the plants depend mainly, for a time on the moisture of the atmosphere. In due season an increase in the amount of water afforded, in proportion as growth advances, will become necessary.

Six-inch pots are the largest used for these Begonias, and grand specimens for use in the house or for conservatory decoration can be grown in receptacles of this size.

Begonia Gloire de Lorraine commences flowering in November and continues until the end of December. This is followed by the winter flowering B. John Heal, which is at its best by Christmas and is passing fair even at the end of January. By this time, B. Gloire de Lorraine var. amabilis is in grand form and retains its loveliness until Gloire de Sceaux completes a sequence of much beauty and great usefulness.

Of the winter flowering Begonias, B. John Heal is the variety mostly grown here. The large, single flowers, of a brilliant rose-carmine color, are profusely borne on large or small plants. So accommodating is this variety that a good stock is easily raised. In propagation and cultivation the conditions as previously stated for Begonia Gloire de Lorraine are adopted and the results encourage me to continue them. Propagation may also be effected from auxillary shoots which are freely produced if the plants have been properly rested after flowering. Drying off is bad practice. Plants that have been properly cared for during the resting period commence growth freely and give abundance of early cuttings. After two or three years' growth tubers are formed, which may be treated very much in the same manner as those of the summer-flowering Begonias.

NEWS NOTES.

J. I. Foxcroft, formerly of Manchester, Ct., has accepted the position as gardener to Mrs. Carl Stoeckel, Whitehouse Gardens, Norfolk, Ct.

It is understood that Hugh C. Schmitt is to erect a range of greenhouses containing about 20,000 square feet of glass near Evansville, Ind.

The Butler Greenhouses at Burlington, Wash., have been purchased by C. I. Breithaupt who already owns the Sedro-Wooley Greenhouses. This gives Mr. Breithaupt one of the largest establishments in the state.

The incorporation is reported of the New England Rose Conservatories, Boston. The capital is \$50,000; 500 shares \$100 each. Directors: Ella V. Walsh, pres.; Wm. A. McAlpine, No. Scituate, treas., and Geo. F. McAlpine.

Lionel D. Waller of the L. D. Waller Seed Co., Guadalupe, California, accompanied by Mrs. Waller, is at present making an extended tour of the East. Mr. Waller had his early training across the Atlantic and with other seed growers on this side before he started in on his own account some fifteen years ago. Since then he has made a good reputation and his firm is now recognized as one of the largest and most reliable growers of flower seed specialties on the Pacific Coast. They grow quite a large line of the leading flower seeds and make a specialty of Sweet Peas among the floral favorites.

It is expected that the Republican National Convention in Chicago next week will bring about a large demand for flowers, and Chicago florists are expecting to profit as a result. Already many orders have been given for the decoration of private houses which will be used as headquarters during the convention. Another result is the wide use of plants and porch boxes throughout the city.

The Recognized Standard Insecticide.
A spray remedy for green, black, white fly, thrips and soft scale.

mention **HORTICULTURE**

That is the Schwab palatial residence on the hill at the back.

Walter Robinson is the live wire head gardener of the flower range

SCHWAB'S Flower Range

Way up among the iron and coal filled mountains of Pennsylvania, Mr. Charles Schwab has his wonderful estate, at Loretta. An estate costing no one knows how many millions.

He has a garden at the foot of his residence terraces, that is acknowledged to be one of the finest in the country. Aside from the charm of its layout, it contains many rare and unusual things, such as delight lovers of horticulture.

Accompanying this garden, is a special range of ornamental greenhouses, devoted solely to flowers. Grouped inside the walled in vegetable garden, is another separate practical purpose range larger yet, devoted mainly to vegetables.

The layout of the flower range is an admirable

arrangement of three parallel houses, with a head house joined to the service building.

Between the houses are rows of frames.

Underneath them, is a wonderful storage space for bay trees, bulbs, soil, and the numerous things so important on a place of such size.

The houses are our semi-curvilinear construction, which, with the extra curve of the eave, and the 24 inch wide glass, gives a highly pleasing effect. In their designing and execution, we were privileged to work with Charles Leavitt, the notable Landscape Architect of New York.

If there are any particular points you would like to know about the houses, do not hesitate to write us.

FERNS

THE VICTORY FERN (Nephrolepis Victoria)

We take pleasure in offering this new and valuable variety of Nephrolepis. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Extra fine specimens.....10-inch, \$5.00; 12-inch, \$7.50

NATIONAL PUBLICITY CAMPAIGN.

With Memorial Day business behind us, publicity work will be devoted largely in the summer months to keeping our slogan, "Say it with Flowers," constantly before the public. It has been the policy of our committee since the inauguration of the Campaign to make our advertising purely national, so that every section of the country would get its share of publicity. No matter how small a community, nowadays it is plentifully sprinkled with magazine readers, and our advertising plans have covered the more prominent magazines, having the largest circulation. While the committee has many times been asked to consider some of the large metropolitan dailies as advertising mediums, it was not felt that any departure from the adopted policy could be made, and practically the whole of the fund available has been spent in the magazines. Magazines, too, are "alive" longer than other mediums, their very large paid circulations, on which the advertising rates are based, being in reality only about one-sixth of the aggregate of readers.

Our Promotion Bureau is daily in receipt of inquiries for the booklet which was distributed at the outset of the Campaign, and which has for two years been out of print, all such inquiries carrying the "keys" of our very first advertisements, thus proving that a large portion of our publicity is exceedingly tenacious of life.

Very many florists have used their local newspapers to link up with the Campaign advertising, and this has been a very wise move on their part. It is realized that this local advertising has become an important part of the Campaign; certainly, never has the florists' trade figured in the columns of local newspapers to such an extent as now. The slogan line electrotypes has been lavishly used, and wherever seen, it forms a link with the magazine publicity. It cannot be used too much, don't let it be used too little.

Some grand publicity is being given to the slogan through the big billboard which is being supplied by our Promotion Bureau for installation of florists' establishments which present opportunities for outdoor publicity. These billboards are 20 feet long and 7½ feet wide, are of iron construction and handsomely painted. The price at

which they are furnished, \$50, is but half their actual cost at today's prices of material. One of these signs should be part of every establishment publicly located.

Our committee continues to be urgently in need of more funds. Contracts for our next season's advertising must be placed without delay, and the amount of publicity to be obtained necessarily depends upon the funds to be collected. With the most splendid results which have so far rewarded our efforts it would be nothing less than a calamity to curtail our work. It is not fair to the members of the committee to expect them to incur liabilities to meet which they must place dependence upon collections to be made later. Many hundreds of florists doubtless intend to subscribe something to the Campaign Fund, and why not do it now, thus rendering an assistance which is sorely needed. Keep the wheels moving and advance is easy. More people are using flowers in these days than was ever before the case, and our Campaign has accomplished this condition. This benefit can be doubled if we get the support we deserve, and this should not be a serious problem. Help us to help you—let us hear from you now as to what you will give, and when you will give it.

BOSTON.

Mr. B. F. Letson, of Carbone's, spoke at the convention of the Associated Advertising Clubs, on Flower Arrangement at a recent meeting of the Worcester Garden Club at the summer home of Mrs. Matthew J. Whittall in Shrewsbury.

Mr. Henry Penn is absent from Boston this week, and is enjoying himself in Indianapolis, Ind., with the Pilgrim Publicity Association.

FAREWELL DINNER IS GIVEN FOR E. H. WILSON.

E. H. Wilson, assistant director of the Arnold Arboretum, was given a farewell dinner at the Parker House by the Boston Horticultural Club. Mr. Wilson is about to start on a year's trip for botanical research in the interests of the Arboretum, most of the time to be passed in New Zealand and Australia. He will sail via England and the Cape of Good Hope and pass some time on his way out studying the flora of South Africa, and on his return trip will visit India.

President John K. M. L. Farquhar of the club, who presided at the dinner, said it is unfortunate that Mr. Wilson will be prevented by a Federal quarantine from bringing back new plants. He said horticulturists consider the quarantine "unnecessary and excessive."

Members of the club last week visited Arnold Arboretum and inspected the lilac display.

NEWS NOTES.

The Horticultural Society of Niagara Falls has elected W. L. Wilkinson president.

The Pennsylvania Horticultural Society is to give the entire proceeds from its Main Line Flower Show to the Bryn Mawr Hospital.

Mr. H. Heistad, Florist, of Rockland, Maine, has furnished the flowers, including cannas, geraniums and gladioli for decorating the Court House and County Jail premises.

THE MARKET.

The market has been well supplied during the past week and has been governed mostly by local fluctuations. In Boston, for example, the knowledge that two of the suburban towns were to have special flower days on Saturday helped to tighten up carnation sales towards the end of the week, and possibly induced some growers and salesmen to hold back a little on their stock. As a rule, the Boston market held its own pretty well, principally on account of cloudy and cool weather which prevented any rush of stock.

Roses sold from 3 to 12c. last week, white roses being particularly in demand and bringing good prices because of numerous June weddings, in fact weddings have a marked effect upon the markets throughout the country. In New York the supply was somewhat cut down, especially on roses and carnations owing to weather conditions, and caused some advance in price. Peonies have been the dominant feature in the New York market, and in fact have been plentiful enough in most of the markets.

In Pittsburgh, roses have commanded an average of 8c. and this would probably have been a fair price in most of the other cities. Carnations average 2 to 3c. and sweet peas are bringing from 75c. up according to quality, some being very poor while others are fairly good. Snapdragons are selling in Boston as low as 50c. while they are quoted somewhat higher in other cities. Marguerites sell for 1 and 2c. Tulips are about finished, a few being offered at 6c. In Boston, peonies are 8 and 12c. which is about as high as any market shows. Callas are quoted at \$10. per 100 in Pittsburgh and lilies at the same price. That seems to be about a minimum price in most markets.

JUNE 12, 1920

No. 24

THE TALK OF THE TRADE

Several times this past winter, Mr. Sim has shown three variegated carnation seedlings of his own; namely, Kiltie, Gay Gordon and Fairy, and there is little question about either one of them so far as attractive varieties as cut flowers, but never has he shown his favorite, Kiltie, in such good shape as he had it at the farewell dinner to Mr. E. H. Wilson, given by the Horticultural Club of Boston at the Parker House the first Wednesday in June.

If I remember correctly, Kiltie has for one of its parents Benora, and the habit of Benora to finish up well when the warm spring suns come along is repeated again in Kiltie. This carnation as shown last week was certainly at its best; form and size were very good, and the coloring was improved over anything we have ever seen. It is a mighty striking variety and I hope that it will turn out fully equal to Mr. Sim's expectations. If it travels the way it has during this season, it is destined to become one of our good commercial varieties.

I believe that adiantum can be grown as a crop of cut sprays for the market at a profit. Neither Boston nor New York are over-supplied; I don't know how Philadelphia is taken care of, but Boston particularly is very short of cut fronds of adiantum. It is not a hard crop to handle; any of the varieties such as cuneatum, hybridum or Croweanum will find a steady call, and while I think that Croweanum and hybridum in the order named are more valuable than cuneatum, any of these sorts are of good value.

One grower told me a short time ago that there was another variety of adiantum that was better than any of these already named, and that is one called California. I think it would pay some grower who has glass adapted to investigate this crop, as I believe he would have a very ready market, and it is a crop that shows less expense for handling than the average cut flower crop.

I was much interested to hear of the organizing of a business in France to grow roses for cut flower purposes

under glass after the same manner as is followed in America. I understand that there is at the present time under construction in Southern France the largest greenhouse in the world for the forcing of roses for cut flowers, the crop to be marketed in all parts of the continent. The heating arrangements is different than what is employed generally. The house will be heated by natural water and the idea of following American cultural methods is to be as closely adhered to as natural conditions will permit in that section of Europe.

The financing of this enterprise is to be 60 per cent French capital and 40 per cent American; it is a law of the French Government that not more than 40 per cent can be foreign capital. American growers will follow with great interest the result of this venture.

The Massachusetts Horticultural

Society has already laid their plans for a general spring exhibition April 5-9, 1921, and at that time as a special feature we are to have a rose show. One thousand dollars has been set aside for competition in rose gardens and Boston will again welcome a fine, big, rose show, and I feel safe in saying that it will be one of the big exhibitions of the coming year. I have no doubt that the American Rose Society will co-operate, and with the plans already laid we are justified in looking for something good in this line next spring.

The season for peonies will be quite as late as is that for the iris, according to all reports, and it may be difficult to have the flowers in proper shape at the regular time set for holding peony shows. In a note from Mr. E. J. Shaylor, the well known hybridizer and peony expert, of Auburndale, Mr. Shaylor says:

"I expect to show some seedlings at the Peony Show at Massachusetts Horticultural Hall, if the show comes when

Peony Gigantea Rose Pink

they are at their best. The season is very late, and as it looks now it will be about June 18th to 20th.

Peonies altogether have been quite a disappointment to florists this season because of their tardy maturity. Usually they can be considered an important Memorial Day flower, but of course this year they were not to be obtained. The business of shipping peonies has made considerable progress in the past few years, especially so far as southern growers are concerned. It is a serious question, though, whether there is much profit in growing peonies for cut flowers in the north. They may serve well as a side line, and of course the nurserymen who grow plants to sell make a good thing from them, but as a cut flower proposition they are hardly worth counting upon.

Members of the trade in New York have been glad to welcome back Mr. James McHutchison, of McHutchison & Co., after an illness of several weeks. Although not yet able to take up his duties at the office, Mr. McHutchison is on the rapid road to complete recovery and expects to be on deck again in the very near future. This will be pleasant news to his many friends who have missed him from his customary place.

As will be seen from the report of Secretary John Young of the S. A. F., the trade is already getting in line for unusually large exhibits at the Cleveland show. I learn that New England manufacturers as well as those from the West are preparing to be on hand

with a good force. At the office of the John C. Meyer Thread Co., in Lowell, I was told that the Meyer salesmen will be on hand at the convention and will have a full and complete line of threads. This phase of the business is one which is not so conspicuous as some others, and yet it is a very important one, and no doubt the Meyer salesmen will meet many old friends and customers.

The plan of selling flowers in street markets is extending apparently. Harrisburg, Pa. is the latest city to make a move in this direction.

The Chestnut St. Market Co. recently announced just before Memorial Day that the market house would be open for the free use of stalls for persons having flowers to sell. This resulted in a rush of buyers and vendors, but the flowers offered were not of choice quality and far from cheap. Peonies were principally buds and brought 5 and 10c. each. Daisies sold at 5c. a bunch and Mountain Laurel at 25c. a bunch. Yellow lilies, blue flags, lily of the valley, mock orange and snapdragon were among some of the other flowers offered. Many of the farmers who came to market had flowers to sell. In ordinary seasons this kind of business might affect the florists, but apparently they did not suffer much this year.

GENERAL NEWS NOTES.

The Clinton Floral Co., of Clinton, Mass., is separating its flower business from its other interests, and will have a shop on the first floor of the Cofman Building. Mr. E. P. Howe will remain manager.

Plant thieves have been in evidence in Connecticut this year and in some cases have made sad inroads on gardens.

Frank Blanchard of South Manchester, Ct., has entered the employ of the Brainerd Seed & Nursery Co., at Enfield.

Fred W. Smythe, of the firm of Wadley & Smythe, 5th Ave., New York City sued Samuel Untermyer for \$11,000, alleging that Mr. Untermyer agreed to purchase rhododendrons and then declined to accept them.

Mr. John Cross, the well known Fall River, Mass., florist, recently lost his father, Mr. Ralph Cross, who passed away at his home in his 66th year.

Mr. G. H. McIntyre, who has conducted a greenhouse at Easthampton, Mass., for several years, has sold his business to Charles A. Anderson, who came from Proctor, Vt., to Springfield some time ago to enter the employ of Aitken, the florist.

Little Talks on Advertising

A Detroit florist who believes in advertising is Mrs. Helen D. Cohan, who has chosen the pretty name of Rosebud Flower Shop for her business. Mrs. Cohan believes in the practice which has been advocated in this department of advertising Saturday specials, and of specifying the particular plants which she has to sell. In a recent advertisement, for example, she featured a \$1.50 box as a Saturday special, and the same advertisement offered Boston ferns at \$1.00 each for Saturday only. This is good work and bound to bring results.

Any kind of advertising which shows originality helps to bring business, provided it is not strained or overdrawn. Some advertisers in their attempt to be original go so far as to make themselves ridiculous, or at least to defeat their own purpose.

Robert H. Isbell, a prominent advertiser of Washington, D. C., has something to say along this line in the Retail Public Ledger, as follows:

The Use of Good Will.

Next to selling goods the most valuable thing advertising can do is to get the store thought about and talked about. Such stunts as historical and patriotic adjuncts of the merchandise advertising on the birth anniversaries of national heroes, put your store in good company and in touch with the best thought of those seasons. Such ads. stick in the memory. They influence people to come to your store long after the date of publication. When you put Abraham Lincoln's picture or a photo of his cabin into your ad. you are hitching your chariot to a star. It pays to keep step with the moods of the public, to take the line of least resistance.

If the weather is hot let your ads. show sympathy by suggesting coolness. If any great civic movement is afoot let the store news reflect it. Your advertising is as big and as broad as you

care to make it. When it goes outside of the store for worthy material it grows in prestige with the public.

Of late some of our best advertisers are discovering that a dash of humor is not out of place in store advertising. Why should it be? A whimsical motif now and then is relished by the most skeptical readers of advertising.

If a man can afford his little joke in selling goods by word of mouth—use it for the purpose of establishing a sort of bonhomie as he proceeds with the serious business of giving the customer what he wants—why can't he do it as effectively in the newspaper? Eccentric illustrations, supplemented with a grain of levity in the copy, are brightening some mighty good advertising nowadays. Good examples of this relaxing of austerity are to be found in the men's advertising of Wanamaker's, New York. This sort of stuff calls for much discretion, of course, but rightly done it's a safe bet the public likes it.

The advertising man who has the gumption and can spare the time will find his most valuable inspiration on the floor of the store. There he can often pick up at first hand real cash-drawer information about the way the public feels toward his store, toward shopping in general, toward advertising and toward specific kinds of merchandise. The personal contact—the final test of store service—furnishes the sure key to the successful points of contact to maintain in the printed message. Those who have never practiced this every-day, non-brilliant method of getting acquainted with the outer point of view will find much to surprise as well as interest them. It's a great life—this studying the public.

FLORISTS' OUTING.

The Boston Florists' Association will have its second annual picnic Saturday, June 26th, at Wardhurst, Lynnfield, Mass. This is the same resort

which was visited by the association last year, on which occasion the members enjoyed themselves hugely. The party will leave Hoffman's store between 1 and 1.30 in the afternoon and as soon as they arrive at Wardhurst dinner will be served. After that, games will be enjoyed, suitable prizes to be awarded the winners.

The Gardeners' and Florists' Club of Boston is holding a field day today (Saturday) at the Arnold Arboretum. Following the club meeting next Tuesday evening, there will be a collation and dance.

To buy or not to buy? That is the question
The coal which confronts every florist who has to put
outlook in a stock of coal. Opinions differ widely.

In some cities the impression seems to prevail that the quicker growers can get in their coal the better it will be for them, and that price alone will not be the only matter to be considered later, as possibly they will not be able to get coal at all. On the other hand, the point of view is expressed that conditions will ease up.

In Boston, a number of coal dealers who have been consulted by florists have advised them to wait until the middle of July, assuring them that the prospects point towards a more plentiful supply and at least no advance in price up to that time. For that reason a number of the larger growers in New England are accepting this advice and acting accordingly. The dealers tell them that with the fires going out in all the big office buildings and apartment houses more coal will be released for the trade and that shipping conditions are likely to be more favorable. They claim that in any event nothing will be lost by waiting a few weeks longer.

There is a certain feeling of doubt, however, regarding freight rates. There seems to be a disposition in Washington to grant the demands of the carriers of the railroad companies who say that rates must go up in order to keep the companies solvent. If the increase is given it is inevitable that florists will have to pay more for all material which goes over the rails. This is interpreted in some localities to mean a probable raise of about one-third in the rate for transporting coal, and without much doubt the increase would be passed on to the consumer. As Senator Walsh of Massachusetts pointed out in a recent speech to Congress, a very large amount of coal has been and is being shipped across the water to other countries. If this coal can be kept at home where most of us think it ought to be kept, there would be a very much larger supply for home consumption. Florists

have a vital interest in this question and any action they can take which will keep American coal for American users will be for the benefit of all concerned. There seems to be a pretty good reason to believe, however, that there will be coal enough to meet the needs of the commercial growers for the winter.

After all, it is largely a matter of transportation and that fact is being given very close attention. Probably many of the private greenhouses will be hard hit as there is a tendency all along the line for owners to figure on closing up their greenhouses in part. This of course is unfortunate, but it seems to be inevitable under present conditions.

Wherever one goes he finds the spirit of
Optimism optimism among the trade. This is a matter of comment and has been spoken of frequently. In spite of all the hard knocks which they have had the past two or three years, the florists of the country find that they are entering upon an era of prosperity and that they have little to fear in the immediate future. To be sure they are embarrassed by difficulties of many kinds, including those associated with fuel, help and high rents; still there seems to be a growing disposition on the part of the public to consider flowers in the home a necessity, and the whole situation in the florists' trade is far in advance of that which existed before the war.

With these facts in mind, all florists who are at all progressive and are alert to take advantage of opportunities as they present themselves see a bigger future than was ever dreamed of in the olden days. The help problem, bad as it is, is by no means of a nature to cripple the business. There are plenty of men who can be obtained. To be sure, many of them are not experienced but if the grower is willing to take some of his own time in order to teach these men the business, he can often develop very creditable helpers. Perhaps there never was a time when the employer had to be on the ground so continuously or had to do so much of the work himself, but that is one of the things which has to be reckoned with on such occasions. Everything considered, florists throughout the country have reason to feel happy over the outlook.

Probably there never has been a time when
The Arnold so many people have visited the Arnold
Arboretum Arboretum in Jamaica Plain as the present season. This is encouraging as it shows a greater appreciation of this wonderful institution and a disposition to use it to a greater extent. It is pleasant to find nurserymen showing special interest in the Arboretum because it offers to them remarkable opportunities for increasing their own knowledge of new plants and incidentally extending their own business. We find gradually creeping into commerce many of the plants which have been neglected altogether too long. It is to be hoped that there will be a still greater development along this line, for there are unlimited chances for enterprising nurserymen to develop new garden subjects which will in the end become of the greatest value for American gardens. The very fact that the public is visiting and using the Arboretum to such an extent is proof in itself that it is feeling an interest in the newer things and will be ready to purchase them when they are offered by the nurserymen.

RENOVATING OLD POTTING SOIL.

To the Editor:—

How can a small florist, with a limited amount of land, renew his potting soil from year to year? Some soil is purchased each year, but he wants to renew old spent soil by spreading on a lot and growing some legume crop. How should he do this to best advantage?

Answer.—How can a small florist renew his potting soil—or rather the life of the soil, so that it can be used a second, and possibly a third and fourth time without the expense of purchasing new soil, is quite a question. We have never given this matter serious thought, as we have plenty of soil to allow all old, partially exhausted soil plenty of time to recuperate, by simply placing it where it will be used for a few years to produce general farm crops. It has often appeared to me that probably as good crops could be grown several seasons in succession where the soil has not been renewed as where it is renewed for every crop. Last Spring I was in a Rose house that had one of the finest crops of Roses coming on for Easter that I have ever seen. The plants were in the same soil for 14 years. This grower has probably taken more prizes at flower shows in the last ten years than any other grower in the Philadelphia district.

All commercial Roses at present are allowed to remain in the same soil, without any renewal, either of soil or stock, for from four to seven years, and we never hear of soil exhaustion. I have read of wonderful crops of Carnations being grown in the same soil for five or six years in succession. We grow Carnations—a little better than some that I have seen, though not nearly as good as a lot of others that I have looked over. We have experimented with soil that was in the houses a number of years, and new soil taken in the house especially for the crop, with the result that experts, later in the season could not determine which was the old or the new. It is generally conceded that there is less danger of loss to the crop when the soil is renewed.

We have been growing Sweet Peas in the same soil for five or six years, and do not see any necessity for renewing it for some time to come. If proper care is taken to have the fertilizers complete and plenty of humus is added, with sufficient lime to correct acidity, there should be no trouble in using the same soil several years in succession, even on a bench. If fertilizer that is not complete is used continuously, trouble will be encountered eventually. Some florists use nothing but tankage, while others use nothing but bone meal. This practice will soon

create a great deficiency of potash. Soil that is apparently worn out could be greatly benefited by spreading about the depth of an ordinary plow furrow, and if in the Spring get a good heavy crop of Canada field peas and oats started as early as possible. Plow this crop under the end of May and seed to Soy beans. The end of August plow the beans, apply a ton of lime to the acre, or more if the soil is rather acid, and seed to rye and Hairy or Winter vetch. Your plot will likely be small and the expense of seed will not be very much even if you were to use double the quantity the farmer would use on the same area. Try to get a good stand each time you sow a crop, especially the vetch and rye. The soil should be in good shape to use the following season, unless it is very badly exhausted, in which case give it the same treatment the following season.

Where so much humus is incorpor-

ated in the soil quite a lot of lime will be needed to overcome the acidity this decaying vegetable matter will develop. A mixture of raw bone and potash would be beneficial before the soil is used, though not in very large quantities. Better apply such concentrated fertilizer soon as the plants start growth, and stir the soil slightly before watering.—*Elmer J. Weaver in Rural New Yorker.*

Mr. Harry Katz, of Greenwich, Ct., has purchased the Mead flower business at 277 Greenwich Ave. The purchasing price is said to have been in the neighborhood of \$25,000. Mr. Katz has engaged Wesley Thomas to conduct the flower shop, and particular attention will be given outside landscape work and general gardening, with Frederick Detmar of Portchester in charge.

**Flowers Under
Glass**

This is a very good time to start working up flowering and ornamental leaved begonias. Good cuttings are made from the new side growth, including that which comes directly from the base of the plants. Flowering begonias root with perfect ease now, and can be handled to best advantage in a shaded house having ventilators which can be adjusted so as to prevent strong air currents. A thin mixture of naphtha and white lead will serve well for shading the house. Keep the floors and the benches cool by wetting them down frequently when the weather is warm. When the cuttings have become rooted they should be potted up into 2½ or 3-inch pots, using loam, leaf mold and sand. Later shifts will require a soil composed of three parts tufty loam and one part well decayed cow manure, with a little sand and possibly some leaf mold.

It is now time to plant stevias in the field. Remember that these plants do not need very rich ground. They will do much better in poor soil, for then they will grow into good bushy plants, while too much fertility will give them a rampant, superfluous growth. Allow two feet between the plants and keep them pinched until the last of August when they can be lifted and potted or put into benches.

If you have poinsettias that were started early they should be ready now for propagating. Don't leave cuttings in the sand too long, although this is a common mistake. Use a knife to make the cuttings instead of breaking the wood with the hand, and allow one or two eyes of soft wood to remain on the plants so that you will have more cuttings in another month. Poinsettias are best potted up in stiff loam mixed with about one-third well rotted cow manure. The potting should be done as soon as the roots are formed. And if you keep them covered with glass and without too much ventilation they will grow rapidly. Some florists find themselves lacking suitable bench space for the purpose, in which event they can grow the plants in a cold frame, setting them on a bed of coal ashes.

If you have a stock of Miltonias, don't forget that they are very subject to thrips, which means that they should be dipped or sponged with fir tree oil or aphine every two or three weeks. Miltonias also require plenty of ventilation at all times during the summer, and should be syringed overhead in bright weather. To get the best results use blinds or lath shades, but if they are not available you can paint the glass, but should take care not to have the shading too dense. If the plants need repotting the work should be done as soon as they are through flowering. Miltonias do well in pans or pots, but of course should have an abundance of drainage. It is not too much to have them half filled with lumpy charcoal or broken crocks. You will get good results by using Osmunda fern fibre mixed with a little live sphagnum moss. After the plants have been potted up it is well to keep them fairly close for three or four weeks, but after that they will need a cool house all summer.

Rose planting is now on in good earnest, but no rose grower who is wise will use poor plants, even though he has to run a little short. In preparing the benches some of the best rose growers like a minimum depth of soil, but there are differences of opinion in this regard. Those who advocate shallow soil will have only three or four inches of earth on the benches, but this means three or four inches when the soil is well firmed. One thing is certain. It requires less labor and therefore less expense to prepare a bench with shallow soil than to have the bench full. In these times of high priced labor and little labor at any price, time and step saving are worth considering. Moreover, it is the opinion of some expert rose growers that too much soil causes American Beauties to run blind. This is because the roots have too much ground to work in. Shallow soil is an advantage in the winter, allowing the plants to dry out readily, and if more soil is needed in the spring it is easily spread.

George Watson's Corner

"You in your small corner and me in mine."

Among other things we saw at the Wanamaker residence at Jenkintown, June 2nd, was a nice lot of Los Angeles rose in bloom in the open border. This beats Lansdowne by three or four days—and Lansdowne is further South—sixteen miles as the crow flies at least. Can't understand that. It ought to have been the other way about. We will have to let John Dodds and Sam Pennock thrash out the why and wherefore. Something needs explaining. Is it soil, exposure, or what?

Percy B. Rigby, manager of the Pennock wholesale market in New York, paid us a visit June 3rd. We notice a change in him in the last fifteen years. He is a world traveled man, of wide experience and we've always looked up to him. Europe, Asia, Africa and America—he has seen them all. But still the good old William Penn, Philadelphia Quaker, at least, so we thought, until we heard him say damn about some of the doings in New York. I said gosh Percy you better not let your president hear you talk that way. Pooh, says he, what do I care, these ginks in New York wouldn't understand you unless you talk their language. It's a story and I hate to tell it. Hope the president does not see this. He is such an ardent enthusiast in carrying Philadelphia refinement of manners into all his business dealings the world over—New York included. More power to him. They all need it.

The Joseph Heacock Co. have been having a great run on palms recently and their staff at Wyncote is being kept on the jump filling orders from far and near. Mr. Gould the manager here, told us on a recent visit that the demand had been particularly brisk lately on the specimen sizes of Belmoreano and Forsteriana from twenty to fifty each. The smaller sizes are also going off well.

The Rodman Wanamaker and John Wanamaker estates at Jenkintown are in the pink of condition just now and their display of Rhododendrons, Peonies and other seasonable flowers are worth going a long way to see. John H. Dodds, the superintendent of both estates, deserves credit for the clean cut perfection of everything and the visitor is agreeably surprised and

the Rhododendrons here and there.

Frank Ross and Mark Mills with their families started for the Poconos on the 5th inst. They expect to be gone about three weeks. They will make their headquarters at Hotel Cartwright, Mt. Cresco, Pa., during their stay. We wish them all a good time and hope the trout fishing will be up to all expectations.

IRIS SHOW AT BOSTON.

Although There Was a Good Display,
Weather Conditions Interfered
Somewhat with Quality.

Iris growers and other exhibitors did the best they could at the flower show held in Horticultural Hall, Boston, June 5th, and really made a very creditable display although handicapped by the weather conditions which had greatly retarded the blooming of the flowers.

It was the first time that the newly-formed Iris Society had exhibited in Boston, and the collection which was in charge of Robert S. Sturtevant of Wellesley was displayed with taste and judgment.

The feature of the show was the rhododendrons which included some two hundred varieties shown by T. D. Hatfield, of the Walter Hunnewell estate, Wellesley. Mr. Hatfield has made a national reputation as a rhododendron grower and this reputation was enhanced by Saturday's exhibit. Remarkably fine hybrid rhododendrons were also shown by T. C. Thurlow of West Newbury, Mr. Winthrop Thurlow being in charge. A new seedling produced from *R. nudiflora* excited special admiration.

Julius Heurlin of the Blue Hill Nurseries, South Braintree, had a fine group of hardy herbaceous plants and flowering shrubs, *Diervilla florida venusta*, exciting much comment. This *diervilla* is the one which Prof. J. G. Jack of the Arnold Arboretum brought back from Korea some years ago and is bound to become a valuable garden subject. Garden makers will be glad to know that it is now offered for sale.

Three miniature gardens from Hillcrest Farm, Weston, and one made by Robert S. Sturtevant were special features of the show.

The vegetables were perhaps better in quality than the flowers and the vegetable exhibit was a most creditable one. The list of awards follows:

PLANTS AND FLOWERS.

Hillcrest Prizes.

Hardy Flowering Shrubs.—Twelve vases: 1st, Blue Hill Nurseries. Miniature Rock Garden. —Covering a space 3x2½ feet, filled with wild plants and flowers exclusively: 1st, R. S. Sturtevant; 2d, Hillcrest Gardens; 3rd, Hillcrest Gardens. **Wild Flowers.**—Collection, named: 1st, Helen E. Knight.

Rhododendrons.—Twelve varieties, one truss of each: 1st, T. C. Thurlow's Sons, Inc. Six varieties, one truss of each: 1st, T. C. Thurlow's Sons, Inc. **Irises.**—Twenty four vases, not less than twelve varieties, three spikes in a vase: 1st, George N. Smith. Twelve vases, three spikes in a vase: 1st, Irishorpe (Allen Jenkins, gardener). Collection of Irises, any or all classes, admissible: 1st, George N. Smith; 2nd, Irishorpe; 3rd, Glen Road Iris Gardens. **Hardy Herbaceous Flowers.**—Twenty vases, not less than ten genera represented: 1st, Blue Hill Nurseries; 2nd, Faulkner Farm. **Hardy Succulent Plants.**—Collection: 1st, Hillcrest Gardens.

Silver Medal: T. D. Hatfield, seedling Rhododendrons.

Cultural Certificate: J. T. Butterworth, *Laelia Cattleya Hycana Hybrid*; A. C. Burrage, *Laelia Cattleya Alice Burrage*.

Honorable Mention: Blue Hill Nurseries, three new shrubs from China (*Neillia sinensis*, *Diervilla florida venusta*, *Diervilla florida Mrs. Teiles*); Mrs. Betty K. Farr, new Begonia.

Prizes Offered by the American Iris Society.

Irises.—Collection of 30 distinct varieties, one stalk of each: 1st, George N. Smith. Collection of six distinct varieties, one stalk of each: 1st, Mrs. C. W. Willis. Collection of six distinct varieties, self-colored, one stalk of each: 1st, Glen Road Iris Gardens. Collection of six distinct varieties, bi-colors, one stalk of each: 1st, Glen Road Iris Gardens; 2nd, Miss A. J. Osgood. Artistic arrangement of Irises with or without other hardy flowers and foliage in vase with opening of not over five inches: 1st, R. S. Sturtevant; 2nd, R. S. Sturtevant. Specimen stalk: 1st Mrs. C. W. Willis, Lobengrin; 2d, Miss Grace Sturtevant, Queen Catrina; 3rd, Mrs. Percy G. Browne, Nieblungen. Collection of three distinct varieties, one stalk of each: 1st, Miss A. J. Osgood. Vase of three distinct varieties, rose and lilac shades, one stalk of each: 1st, Mrs. C. W. Willis. Vase of three distinct varieties, white or blue and white: 1st, Mrs. C. W. Willis. Vase of three distinct varieties, yellow standards: 1st, Mrs. C. W. Willis. Vase of three distinct varieties, lavender bi-colors: 1st, Mrs. C. W. Willis; 2nd, Miss A. J. Osgood.

VEGETABLES.

Hillcrest Prizes.

Beans.—String, fifty pods: 1st, Faulkner Farm, Plentiful. Cauliflower.—Three heads: 1st, Hillcrest Gardens, Snowball; 2nd, Oliver Ames, Snowball; 3rd, Faulkner Farm, Kronk's forcing Erfurt. Cucumbers.—Four specimens: 2nd, Hillcrest Gardens. Lettuce.—Four heads: 1st, Oliver Ames, Big Boston; 2nd, Faulkner Farm, Sutton's Heartwell. Radishes.—Twenty-four specimens: 1st, Oliver Ames, Scarlet Globe; 2nd, Hillcrest Gardens, Scarlet Globe. Spinach.—Four quarts: 1st, Hillcrest Gardens, Round Thick-leaved. Collection of Vegetables.—Six varieties: 1st, Hillcrest Gardens; 2nd, Oliver Ames.

Gratuity: Hillcrest Gardens, Uncle Gideon's Quick Lunch.

Mr. Fred Ravier, of Mobile, Ala., was recently fined \$25.00 for violating a city ordinance which prohibits the sale of flowers on Sunday.

GENERAL NEWS NOTES.

J. H. Pan, of the Flora Nurseries, Heemstede, Holland, is making a trip through the states, visiting the important cities, including Boston. He reports a good outlook for the bulb crop.

J. F. Ammann, of the National Growers' Association, was the speaker at the last meeting of the Baltimore Florists' Club, June 4.

Mr. H. G. Perry, the popular manager of Dard's, at Madison Ave. and 44th St., New York, is receiving many congratulations. It is a boy, the first one.

Charles Morse, of Morse & Beals, Lowell, has been having a week of good fishing in Maine.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

There have been a number of disappointments in the way the shrubs have flowered in New England this season. Even in the Arnold Arboretum, under the best of conditions, some of the displays have been poor. This is particularly true of the wistarias, of which the Arboretum has an excellent collection. The plants are not flowering well at all, and this seems to be the condition throughout New England. Presumably the weather conditions of last winter are responsible, because it is reported that in Philadelphia and further south the Wistarias are making a splendid showing this spring.

Rosa Hugonis has also been a disappointment, as it is not nearly so full of bloom as for the past two years. Its blooming period was also consid-

erably delayed, and Rosa omeiensis showed its flowers first this year.

It cannot be expected that every class of shrubs will make a perfect showing each spring, and there has been full compensation this season in the flowering of the lilacs and the crabapples. Lilac Sunday, May 30, was one of the most perfect days of the season, with the result that thousands of people visited the Arboretum, and enjoyed the beauty and the fragrance of the lilac blooms. Moreover the lilacs flowered fully as well as for many years. Indeed, the display is not yet over, and the tree lilacs which are the last to flower are covered with buds, promising a better showing than for a long time.

Apparently the flowering crabs are beginning to be appreciated more gen-

erally than in the past. This is well, for among them are some wonderfully fine garden specimens. I know of few plants more beautiful than Bechtel's crab, which is most liberal with its flowers, and the remarkable double blossoms of which resemble small roses. Bechtel's crab is by no means new, and yet not planted to a great extent. It is worthy much greater popularity than it has yet achieved, not only for its garden beauty, but for the value of the sprays when used for house decoration. They last a long while in water and are exceedingly ornamental.

Many flower lovers the world over will regret to hear that the great greenhouse on the Duke of Devonshire's estate in England is being demolished. This greenhouse was almost a replica of Covent Garden. A syndicate has bought the place and the greenhouse, which was the largest in the world, has had to go.

Although weather conditions have been against them, members of the

American Iris Society have gone bravely ahead with their exhibits this season. Naturally they have not been able to make as good a showing as they would in an earlier season, but they certainly have justified the existence of the Society, and have done much to awaken increased interest in the iris. The first eastern exhibit of the Society was given in connection with the Pennsylvania Horticultural Society, in the Wanamaker Store, Philadelphia, this month, and between 1,500 and 2,000 beautifully colored blooms were displayed. The newspapers gave considerable attention to the exhibit, and one of them printed the following:

"The American Iris Society is the only organization of its kind in the world and has been organized but four months. The present membership is more than 400, including European iris growers of international reputation.

"The Iris is a flower species that grows in all parts of the world. The society encourages the planting of the flower by amateur gardeners, because of its hardy growth and beautiful colors.

"The exhibit includes plants largely from Europe, Asia Minor and Persia. A few American, Siberian and Jap-

anese exhibits were displayed and attracted widespread attention.

"Officers elected by the society are:

President, John C. Wister, Philadelphia; vice president, William A. Peterson, Chicago; secretary, R. S. Sturtevant, Wellesley Farms, Mass.; treasurer, Frank H. Presby, Monclair, N. J."

It is most pleasing to find many increasing evidences of the growth in favor of gardening as a hobby or recreation for women as well as for men. A plan which has much to recommend it has been worked out in Boston this spring, the National Civic Federation having made arrangements by which several of the most prominent gardens around the city could be visited by those interested on certain dates. A small fee is charged in each case. One of the gardens soon to be visited is that at Faulkner Farm, in Brookline, the estate which is carried on under the efficient management of Supt. W. N. Craig. The beautiful gardens in their attractive setting will be admired. There is much more to Faulkner Farm though, that merely the gardens, for farming operations as well as market gardening are carried on in quite an exten-

sive way, the work being under Mr. Craig's supervision and being so extensive that his friends often wonder how he is able to do so much work, for he is an indefatigable writer, much in demand as a lecturer, and a most faithful secretary of the Gardeners' and Florists' Club of Boston.

ARBORETUM BLOOMS.

Rosa omeiensis has opened its flowers this year several days before R. Hugonis and R. cinnamomea which are usually the first Roses to flower in the Arboretum. This Chinese Rose, which is common on the mountains of western China, gets its name from Mt. Omei, one of the sacred mountains of the Empire, where it is common. It is a hardy, fast-growing shrub with erect stems covered with bright red prickles, white fragrant flowers hardly more than an inch in diameter, and bright red fruit on elongated fleshy, yellow stalks. On its native mountains it sometimes grows to the height of twenty feet. Judged by the way it has grown in the Arboretum, this Rose should make an excellent hedge for New England gardens.

Aesculus georgiana is covered again with its compact clusters of large red and yellow flowers. This southern Buckeye has not been injured by the severe winters of 1917-18 and 1919-20, and is certainly one of the best new plants which have been brought into our gardens in recent years. When first discovered it was believed to be confined to the neighborhood of Stone Mountain in central Georgia, and to be always a shrub in habit, but is now known to range northward in the Piedmont region to North Carolina, and often to grow into a small tree. The oldest plants in the Arboretum are beginning to assume a treelike habit, and in the parks at Rochester, New York, Aesculus georgiana is a shapely small tree with a straight well developed trunk. Many other Horsechestnuts and Buckeyes are now in flower: and the large group of these trees and shrubs on the right hand side of the Meadow Road is just now one of the most interesting and attractive in the Arboretum.—*Arnold Arboretum Bulletin*.

THE TOTTY DINNER.

A Most Enjoyable Event Held in New York City.

The subscription dinner given in honor of Charles H. Totty of Madison, N. J. by about thirty of his friends at Mouquin's Restaurant, New York City, on Saturday evening, June 5th, was an enjoyable affair from start to finish. Many will be interested to read the list of friends present and quotations attached, as there was a personal touch which made everybody feel at home and closely connected.

Mr. Totty has been obliged to change his sailing date somewhat on account of strikes in Havre, but he will soon be on his way to the other side, Mrs. Totty accompanying him, and they will bring back with them on their return their daughter who is studying at the University of Paris, having won a scholarship at the institution. Mr. Totty will visit the high lights in horticulture in Europe, and is particularly interested in the forming of the company to grow roses in Southern France under glass, following in a general way American methods of culture.

While our Federal embargo does work against the bringing into this country of horticultural products from

abroad, it still is possible to bring in new things in a limited way, and while Mr. Totty is looking over all the new things, we may be sure there will be some results accrue from his trip which will be interesting to the growers on this side at a later date.

ICELAND POPPIES.

(Papaver Nudicaule)

For more than a week the Iceland Poppies have been flaunting their gay skirts in every shade of yellow, white, lemon-color and orange in our gardens. They are getting to be one of the most popular of our garden flowers. Their seeds fly away and come up in some pretty unexpected nook, they have established themselves among us, and they have tempted the hybridizers so that we now have new shades and colors among them, lovely tones of pink and copper. Since the Iceland Poppies have done so well for us why should we not know more of the flora of that island? There are doubtless new beauties to be found in China, Japan and Korea, even with the many explorations which have been made through those countries we cannot believe that we have yet exhausted their treasures. Nor are we yet sufficiently familiar with the flora of our own national parks, the Yellowstone and Mount Ranier. Yet there is always an ear to hearken when Nature offers her story book.

"Come wander with me," she said,

"Into regions yet untrod,

And read what is still unread,

In the manuscripts of God."

LANDSCAPE ARCHITECT VS. LANDSCAPE GARDENERS.

To settle a controversy, will you inform me through your columns whether it is correct to use the term "landscape architect," rather than "landscape gardener" when referring to one who lays out and plants grounds—F. W. L., Tenn.

Answer: We have always been of the opinion that the use of "landscape architect" was never legitimate when applied to one who lays out and plants grounds, even though, as is sometimes said in rebuttal, the Almighty has been referred to by high authorities as the "Architect of the Universe." An architect is one who is a chief builder in the line of architecture, the science of building. London the great landscape gardener, and probably the most prolific writer on horticultural subjects the world has known, was quite content to use the term "landscape gardener," using it in preference to "planner," which was in use by the Scotch gardeners in his day. A man may, of course, name his calling in any way he pleases, if he fears not ridicule, just as we have "adsmiths" and "jokesmiths," although everybody knows that a smith is a worker in metals—Journal of the S. A. F.

COMING EVENTS

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 34 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 60,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5 1/2 x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (Nephrolepis Victoria)

We take pleasure in offering this new and valuable variety of Nephrolepis. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN

August F. Poehlmann, head of Poehlmann Bros. Co., Morton Grove and Chicago, Ill., whose growing establishment is the largest in the country, says: "Summing up the results obtained by collective advertising thus far, I feel encouraged to go on with it, and I hope to see every retailer, wholesaler and grower tied up with this advertising campaign."

In this summary is voiced the opinion generally of those who have made this movement possible. It ought to have some effect on the minds of those to whom we look for assistance in the continuance of the Campaign. Mr. Poehlmann, perhaps more than anyone else, is in a position to observe the beneficial results we have obtained, and that is why he recommends its continuance and extension.

Last year our Publicity Committee set the goal for \$100,000, the fund which it was believed should be spent for publicity. Their belief was based upon the immense amount of profitable publicity we had obtained in the previous year for less than half that sum. Their expectations, however, only materialized to the extent of nearly sixty per cent, but again we secured publicity sufficient to swell the prestige obtained in the previous year and to increase the demand for flowers very perceptibly. This year the same goal was set, as our Committee reasoned that, surely, now the florists would perceive the importance and profit in a vigorous prosecution of the campaign. Up to this writing, however, less than one half of the required amount is collected.

It cannot be said that the florists are too poor to provide the amount required. Nor can we believe that they are not anxious to increase the business they are doing. Then what is the reason for this holding back? Is it that they are content to let their more generous brother florists shoulder the burden of expense, content to reap a share of the harvest he provides, without a trifling aid from their own pockets? There may be some who have this idea, but in the main it is not one characteristic of the florist as we know him, always ready and anxious to pay his way. Is it because they have not faith in the efficacy of the campaign? In this case, they have Mr. Poehlmann's

views to ponder upon. He knows, and so do all our other supporters, especially those whose subscriptions run to large amounts. How many of those who have not yet tied up with us, realize that some of their florist brethren are paying into the fund as much as \$25 to \$50 per month. They certainly have faith in the work, and are not merely taking chances.

As soon as we get the required support, we can double the benefit now being received. Our Committee is prepared to take immediate action, as the money received meets the stages planned. Don't let our slogan rust—rather add to its lustre through greater use. "Say It with Flowers" as a slogan is the best asset our industry has ever had. The more we use it, the better for our business. Help it along, please, by sending in bankable evidence of your support right away.

Trade Exhibition

The following have reserved space in the Trade Exhibition to be held in connection with the Society's Convention at Cleveland, August 17-18-19. These names are in addition to those published in the previous list:

Ralph E. Huntington, Mentor, O; A. Henderson & Co., Chicago, Ill.; Lion & Co., New York City; United Bulb Co., Mt. Clemens, Mich.; Wertheimer Bros., New York City.

JOHN YOUNG, Sec.

43 West 18th street, New York.

CHICAGO FLORISTS' CLUB.

The regular meeting of the Chicago Florist's Club was held at the Randolph Hotel, Thursday, June 10th. President Waters called the meeting to order at 8.30 P. M.

Candidates elected to membership are:

E. D. Burton, 900 Masonic Temple, Chicago (Sales Mgr. American Greenhouse Co.).

H. E. Larson, 431 S. Dearborn St., Chicago (Advertising Expert, Florists Service Bureau).

R. P. Bohlander, Grower, Hillside, Illinois.

Frank Paenicka, Grower, Grosse Point, Illinois.

Aram Nestijian, Grower, Wilmette, Illinois.

Nominations for membership were: William M. Reid, Chicago, Ill. (A. L. Randall & Co.)

President Waters on behalf of Mr. Morton, chairman of Garden Committee briefly outlined the work as being done by this committee and it is evident that the Committee's activity have resulted in very effective publicity for the Club.

Chicago Florist's Club has decided to travel to the Cleveland Convention via New York Central Railroad August 16th, at 11 P. M., arriving at Cleveland at 8.15 A. M. Florists passing through Chicago en route to Convention are invited to join our party. Full particulars regarding train schedule, railroad and pullman fares will be announced by Michael Barker, chairman, Transportation Committee of this organization.

President Waters has appointed every member of the Florist's Club to act as a Committee of one to boost the coming Convention, and it is also specially requested that each member act as a reception committee to extend the hospitality of florists of Chicago to all florists coming via Chicago.

A. J. Zech has been instructed to make arrangements for bowling team at the coming convention—bowlers elsewhere please take notice—Trustee Zech must bring back the big prizes. Chicago bowlers are expected to again capture the championship as occurred at the Detroit Convention last year.

By action taken at this meeting it was decided to discontinue our meetings for the summer months. There will be no meetings during July, August and September.

It was resolved to open the fall season October 7th, 1920—an appropriate

tion of \$250 has been set aside for the use of the good of the Club Committee to arrange for a special programme to be fitting for the occasion.

There being no further business the meeting adjourned.

F. LAUTENSCHLAGER, Secy.

AMERICAN ROSE SOCIETY.

It has been found necessary because of the lateness of the season to postpone the pilgrimage to the Rose Test Garden at Cornell University, Ithaca, New York, from June 25th, to June 30th, 1920. The college is to hold a series of Farmers' Field Days from June 30th to July 2nd inclusive. An interesting series of lectures and field trips have been arranged. The members of the American Rose Society will meet in the garden at 1.00 P. M. where talks on classification of roses, also on their culture will be given.

E. A. WHITE, Secy.

Mr. A. A. Wagner has opened a new flower store at Cedar Rapids, Ia.

It is understood that C. E. Mealy, of the Mealy Flower Co., Colorado Springs, is to put up 15,000 square feet of glass this year to replace the present range.

THE MARKET.

Market reports show a very quiet situation all along the line. Supplies have been ample and sales have not been brisk. As one salesman in Boston expressed it, "The market has been backing up all the week," which interprets the situation very well to the average florist. Reports from Pittsburgh and some other cities show that there is a downward tendency in prices.

Roses sell as low as 2c. for short-stemmed stock, but good American Beauties in Boston are selling up to 25c. In New York, Buffalo and Pittsburgh, the price of roses runs from 4 to 15c. Carnations sell steadily at about 3c. Callas in Boston are bringing from 50c. to \$1. This seems to be the price in other sections, although they may run a little higher in New York. Lilies are from 8 to 10c. Sweet peas have been almost a glut in the market, partly because the stock is by no means first-class. It is possible in almost any market to buy them at 75c. per 100.

Peonies of course are in abundance in Boston and are bringing from \$1 to \$2 per dozen. As a matter of fact, peonies are the special feature of the market everywhere, are fairly good in quality and the demand is also fair. Candytuft and feverfew are now selling from 20c. per bunch up, in Boston.

SUICIDE OF BOSTON FLORIST.

A bullet wound in his right temple and a revolver clutched in his hand, Benjamin Kozminsky, 32 years, a florist, was found dead in the rear of his store at 3190 Washington street, Roxbury. Four days previously he had married a girl recently crowned as the prettiest girl in the section where she lived.

On the cash registers in the store

were three letters of explanation and farewell. Two of them were to his wife. The first asked her forgiveness, and said that he "could not stand" mysterious attacks of nervousness which had troubled him ever since his service overseas. It expressed undying love for her, and urged her to forget their brief happiness and reconstruct her life without thought of him.

DEATH OF CHARLES W. CROSMAN.

Charles W. Crosman, president of Crosman Brothers Co., seedsmen, of Rochester, N. Y., died recently, aged 73 years. He was well known as a seedsman, having succeeded his father, Charles F. Crosman. He carried on the business after the death of the father with his brother, George F. Crosman. Mr. Crosman was born in Rochester on January 13, 1847, the eldest son of Charles F. and Mary L. Crosman. He received his education in the public schools. He aided materially in promoting the interests of the city and took great pride in its development. He was greatly interested in all that pertains to agricultural and horticultural developments.

GARDENERS' & FLORISTS' CLUB OF BOSTON.

A very enthusiastic meeting was held Tuesday evening, with over two hundred members present. There were three new members elected. There was an unusually large number of exhibits, among the most prominent being a large vase of *Lilium candidum* from Daniel White, North Easton; collection of peonies, James Methven; *Pyrethrums* and *Aquilegias* from W. N. Craig; large display of iris; splendid roses from Peter Arnott, Chestnut Hill, and many others.

The entertainment furnished by

Mr. J. Harris, of Penn., the Florist's, was the best ever heard before the club. There were selections by a male quartet, duets, solos by ladies and gentlemen, and a violinist entertained also. During the singing of the S. A. F. song, "Say It with Flowers," young ladies with baskets of flowers passed through the audience and distributed choice blooms. Through the courtesy of Mr. Henry Penn, everybody present was presented with a copy of the song.

A collation followed the entertainment, and dancing then continued until the wee sma' hours.

DAMAGE DONE BY HAIL.

As we go to press, reports are coming in of considerable damage done by a severe storm which struck Boston and vicinity Tuesday afternoon. In some sections there was a heavy fall of hail, with the result that a great amount of glass was broken. It was said that Framingham growers were particularly unfortunate in this respect. It is understood that William Nicholson had about 4,000 lights broken and about 2,000 panes in the houses of Sam Goddard were demolished. Besides the damage done to glass, there was considerable injury to outside stock which was badly cut up by the hail.

Owing to the lateness of the season, it has been necessary to postpone the June exhibition of the Rhode Island Horticultural Society until June 22nd.

It is announced that Miss May Clark, who has been conducting the Humphrey Flower Shop in Springfield, Mass., the last few years, is to be married to Paul H. Wildey of Meriden, N. H. The wedding takes place pretty soon.

HORTICULTURE

Vol XXXI

JUNE 19, 1920

No. 25

THE TALK OF THE TRADE

Conditions in general through the East in the way of Baby Ramblers for the coming season are promising. There is a larger quantity of stock available and several fields which I have seen are in mighty good condition. Plants are breaking away nicely from the bottom and there should be some very nice stock offered. I don't mean to say that there will be any surplus, in fact I think everything that there is will be quickly taken up.

Such varieties as the crimson variety of Baby Rambler, Ellen Poulson, Erna Teschendorff, Orleans and Tausendschoen are always a satisfactory crop, both for the plantsman as well as the storeman. I have seen several fields of these planted out fairly early from 3½ and 4 inch pots that are coming along in great shape, and I don't think there is any question that they will develop into fine stock for the fall.

The bulb situation seems still to be quite a complicated matter, and if the harvest in Holland is going to be up to the usual quality, I am inclined to think that there is going to be a break in prices before it is over with. I don't think this will apply so much on Japanese bulbs, but on the Holland stock there is quite a strong indication that something is apt to break most any time.

If I understand correctly, England is holding back in buying, and of course nothing can be expected from two big buyers in pre-war days, namely Russia and Germany; and American buyers have certainly shown a strong indication of being gun shy in the same direction. I also believe now from latest reports that the paper white crop from France is not as large as was expected. I don't think the price will be more than last year but I do believe that the market will clean up in good shape. It would seem to me now to be a pretty good policy for everyone wanting paper whites to order early.

Begonia plants in the different ranges around Boston and New York are framing up in fine shape. I can't see anything to prevent a fine lot of plants for the holidays. Plants raised from leaves are coming along in 4's

and 5's now, and a mighty pretty lot there is to be seen. The early top cuttings are just being potted up, and while at one time I thought there would be quite a short crop, everyone seems to be coming along nicely, and for late top cuttings a good supply will be available. This is valuable stock nevertheless for mixed work such as hampers and pans, and for made up pots of begonias alone; the late leaf cuttings serve every purpose.

I am interested in a note from Mr. Albert Pochelon, secretary of the F. T. D. A. in regard to the success of the bank account which was established in Canada some time ago by the F. T. D. office in order to offer facilities for saving the discount rate prevailing. Secretary Pochelon says that very good results have been obtained, but that he finds, unfortunately, that many American members are not reciprocal. It seems that they do not pay their Canadian accounts through the F. T. D. office, thereby taking advantage of the discount rates, the result being that the cash balance in the Canadian branch is far in excess of the American balance, and Mr. Pochelon is writing the following to members of the association throughout the country:

"We feel in justice to the courtesy extended that all Canadian accounts

should be paid through this office, and therefore ask your co-operation by sending checks for Canadian members to this office."

It seems to me that Mr. Pochelon's request is one which should be heeded because in a co-operative movement like that of the F. T. D. it behooves all members to do what they can to help along whatever will be of advantage to the association itself, and the other members. In other words, it means real co-operation, and not simply co-operation when one's own personal interests are involved.

The new Begonia Peerless being introduced this year by J. A. Peterson & Sons is finding a good sale, and bids fair to be another good variety to add to the list which we now have. It is very similar to Mrs. J. A. Peterson and is a seedling from that variety by Socotrana. Mr. Peterson claims that it holds flowers very well, and I am sure that the plants which he has showed in various cities during the winter were pleasing to plantsmen in general. They were mighty pretty specimens and very attractive in every way. If we can all grow it anywhere near as well as Mr. Peterson, we will not be disappointed.

Increased fame has been coming to J. T. Butterworth of Framingham in recent months. His exhibits at Horticultural Hall in Boston have attracted much favorable comment and evidently

Well Arranged Wedding Decoration

many orchid lovers have been led to visit his establishment, for we find the following in the Framingham News, Mr. Butterworth's home paper:

"Horticulturists from many sections have visited the greenhouses of J. T. Butterworth, Clinton street, in the last ten days to view one of the finest displays of orchids ever seen here.

"Among the hundreds of orchid plants raised by Mr. Butterworth a prize Cattleya Mossiae bloomed recently and it is doubtful if any orchid plants have been known to produce blossoms that would equal it in color, shape or size.

"It was a perfect specimen of an orchid and florists from many cities came here to view it. Mr. Butterworth also has some rare blossoms of Cattleya Mendlii, Laelia Cattleya, Dendrobium Cypripedium and Odontoglossum, all of which present a beautiful picture.

"Mr. Butterworth displayed a Miltonia Vexillaria at Horticultural Hall, Boston, June 5."

According to an article in the Worcester Telegram, an amusing incident occurred at a recent meeting of the garden club at the Shrewsbury estate of Mr. and Mrs. Matthew J. Whittall. The speaker of the occasion was Mr. Letson, of Carbone's Boston store, talking on the arrangement of cut flowers. In the course of the afternoon Miss Fannie Morse, president of the club, asked Mr. Letson if he could give her some information.

Everyone expected her to ask about the care of some kind of flower, but her question was: "Can you tell me what has happened to the very attractive young lady who used to arrange flowers at Carbone's several years ago?" There was a general laugh then, but delighted applause followed Mr. Letson's reply: "Well, I married the most attractive of the young ladies four years ago."

I have been rather surprised to find so little advertising among retail florists with the expectation of winning June wedding orders. I do not know whether this can be interpreted to mean that florists do not expect that June weddings will be numerous this year, or whether it means that they are carrying all the business they can properly handle. Truth to tell, the orders for wedding flowers seem to be fewer than for many past years. No doubt the present high cost of living is having a deterrent effect upon matrimonially inclined couples, something hardly to be wondered at. In Boston Henry Penn has keyed his ads to the strain of the wedding march consistently so far this month, and

no doubt has found it paid. As a matter of fact, wedding business is well worth going after, even though the profits may not be very large. A church wedding in particular gives a florist a most desirable amount of prestige, and if his work is done well, is exceedingly good advertising in itself. As a matter of fact, it takes an expert to do a job of church decoration, but few undertakings bring a greater measure of satisfaction.

CONVENTION HALL.

In regard to a report that the Ninth Garage in which the Society of American Florists' Convention and Trade Exhibition is to be held in Cleveland, August 17, 18, 19 next, might not be ready in time for occupancy, Vice-President F. C. W. Brown and Herman P. Knoble, acting for our Executive Board, give assurance that the building, at least the floor we are to occupy, will be ready in ample time for our purpose. The only problem now before the Advisory Board in charge of convention arrangements is one looking to a re-arrangement of the floor plan which will provide more exhibition space. It is expected that by reducing the width of the aisles, additional space can be secured to accommodate a few more exhibits, without material change in the location of exhibits already provided for. The largest trade exhibition in the history of the Society is now more than a possibility.

COMING EVENTS

Chicago.—American Ass'n of Nurserymen, annual convention, June 23, 24, 25. Sec'y, John Watson, Princeton, N. J.

Hartford, Conn. American Rose Society, annual pilgrimage, June 24. Sec'y, E. A. White, Ithaca, N. Y.

FIELD DAY OF ROSE LOVERS.**The American Rose Society Meets at Washington.**

June 2d was indeed an ideal Rose Day in Washington. D. C. About 100 members of the American Rose Society registered at the store of Gude Bros. before 10 A. M. Automobiles were waiting to take the party to the Rose Test Gardens. The roses in the garden were at their best, and the party spent two most pleasing hours enjoying the abundance of rose bloom. The climbing varieties were not in full bloom but the Teas, Hybrid Teas, Polyantha and Rugosas were magnificent.

On the day previous a committee consisting of Dr. B. T. Galloway, chairman, L. C. Corbett, F. L. Mulford, W. Van Fleet and D. N. Shoemaker made a careful survey of the garden. The committee reported that they found the garden in generally good condition. The season has been backward, consequently roses are from ten to twelve days late. There is very little mildew. The severe winter injured a good many of the varieties. The committee considered only the varieties now at their best. Of the Pillars, Scheila Wilson, Paul's Scarlet Climber, and Paul's Carmine Pillar were scored the highest. Of the Baby Ramblers the following were particularly good: Yellow Baby Rambler, Triomphe Orleanais, Mrs. W. H. Cutbush, Gruss an Aachen, Echo, Marie Pavie, Clothilde Pfitzer, Schneekopf. Of the Teas and Hybrid Teas the following were given special mention: Ophelia, White Killarney, Konigan Carola, Lady Alice Stanley, La Tosca, Lady Ursula, Lady Ashtown, Gustav Grunerwald, Killarney Queen, Gruss an Teplitz, Avoca, Red Radiance; and of the Hybrid Perpetuals the committee made special note of Maharajah, Pierre Notting, General Jacqueminot, J. B. Clark, Mrs. Sharman-Crawford, Paul Neyron, Victor Verdier, and Frau Karl Druschki. The committee made special note of the following Moss: Luxemburg, Briers, Flora McIvor, Julia Mannering, Anne de Geiristein, Bradwardine, Green Gra-

varian, Rugosa No. 14668 (Van Fleet), Rosa Parfume de la Haie, Amelia Gravarian and Rugosa prostrata. There are in the garden 403 varieties of roses as follows:

Hybrid Perpetuals.....	51
Hybrid Teas and Teas.....	154
Bush Rugosa Hybrids.....	27
Climbing Wichuraianas.....	66
Baby Ramblers D. Multiflora..	30
Climbing Tea Hybrids.....	14
Climbing Noisette Hybrids....	12
Climbing Multifloras.....	36
Climbing Setigeras.....	5
Climbing, miscellaneous.....	8

403

From the garden the party was taken through the Arlington Cemetery, stopping at the new Memorial Stadium and at Lee's Mansion. They then went to Mrs. Bell's beautiful home at Twin Oaks where an hour was spent in the garden and in enjoying the hospitality of Mrs. Bell. Refreshments were served on the broad verandas at Twin Oaks, after which Mrs. Bell showed the visitors through the garden. Returning to the house Mr. Gude addressed Mrs. Bell stating that the American Rose Society through its president, Mr. Pyle, wished to express its appreciation of her hospitality. President Pyle then stated that because of Mrs. Bell's repeated hospitality and especially because of her interest in rose progress as manifested by her gift of the Hubbard Memorial Gold Medal, the Executive Committee had unanimously voted to confer on her an honorary membership. He asked Mrs. Bell to accept this membership as a slight token of the appreciation of the American Rose Society. Mrs. Bell graciously accepted and thanked President Pyle for the honor conferred upon her.

The party then returned to the Ebbitt House where luncheon was served. The tables were beautifully decorated with Red Radiance. In the somewhat formal after-dinner speaking W. F. Gude presided, and first introduced Professor Corbett, asking him to speak

on the development of the Rose Test Garden. Because of trouble with his voice Professor Corbett asked to be excused.

J. Horace McFarland was then introduced and spoke on "Hugonis and Its Hybrids." After discussing the beauty and hardiness of the typical Hugonis, Mr. McFarland spoke of the wonderful work Dr. Van Fleet has done in producing hybrids of this species; he also expressed the appreciation of the American Rose Society for the splendid work the Department of Agriculture is doing in developing roses.

Entered as second class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Window boxes are appearing on every hand and apparently the tendency to embellish public and commercial buildings as well as private homes with flower boxes of this kind is again making itself felt. This tendency had assumed large proportions before the war but of course was held in abeyance while the great conflict lasted.

This is a feature of floral decoration which florists can well afford to cultivate. Occasionally in the case of a big building like the Filene store in Boston, the furnishing of plants and their care throughout the summer comes to an item of considerable proportions.

One advantage of these window boxes when displayed by hotels, stores and other commercial establishments is that it awakens an increased interest in the eyes of private customers and encourages them to start window boxes of their own. It would seem as though much could be done along this line by town florists if they could get their local papers to publish an occasional article on window boxes; what to use in them and how to care for them. It has been pointed out in HORTICULTURE before that the cooperation of newspapers is of the greatest value in helping florists, and the florists have an opportunity of securing this cooperation which is denied to men in most other lines of business.

Certainly interest in flowers is growing apace among all classes of people. This is indicated just now by the activities of the garden clubs, and especially by the numerous flower shows which are being held. Various cities are coming to prize the reputation which they are winning among flower lovers, and Harrisburg, Pa., is one of these. Probably Harrisburg is best known now to the majority of people in the horticultural world as the home of J. Horace McFarland, editor of the Rose Annual; but it is holding its annual rose show, which bids fair to become an event of importance each season. One of the Harrisburg papers prints the following in a leaded editorial, which is good advertising:

"Perhaps Harrisburg can never expect to be the 'Rose City' as Portland, Oregon, but it can very easily attain a

distinguished position if it goes even more strongly for roses and other flowers. It has been said that in the person who has no interest in babies, music or flowers—one of this trinity—there is something fundamental lacking. Flowers then offer one medium of escape from this defect. They are not only a joy to their growers, but they make for a more beautiful city, a better grade of citizenship, a finer outlook on life in all its profound recesses."

The quarantine mania seems to be sweeping over all the countries in which horticulture is an item of importance. It is now very much to the front in France, with the

result that growers are very much aroused over the situation. The matter was frankly and promptly discussed at the second meeting of the Federation Horticole Professionnelle Internationale held in Ghent last month. French representatives present stated that the various horticultural associations had not been consulted in the matter of the prohibition order which has been issued by France excluding imports of plants and flowers from all countries. They said that they were distinctly against any such prohibition as they had already felt the effects of the American act and desired to work amicably and freely with allied countries. The French order is a drastic one, and hits particularly the Belgian growers who have already been badly handicapped by quarantine 37 in this country. France has been their important customer for azaleas, rhododendrons, hydrangeas, palms, and other pot plants. As a matter of fact, the action of the French government seems quite as short sighted as that of the Federal Horticultural Board in Washington, because many of the articles prohibited are kinds which are needed in the process of business reconstruction in the devastated areas of France. These things were ruled out as luxuries. As a matter of fact, the common pot plants and flowers are purchased and used by all grades of society and are considered as little less than necessities. Just how the matter will work out eventually no one can say, but the British seem to have the cards in their own hands, and if they so desire can retaliate very much to the disadvantage of France, because while comparatively few plants and flowers are sent to France from England, the imports into England from French territory are very considerable, and a retaliatory spirit would cause France to suffer more than England.

Numerous echoes of the peculiar Dutch bulb situation in Holland have been coming to this country, although buyers here have not been affected to so great an extent as those in England. Apparently there has been a steady game of bluffing for the last year, which has accounted in part for high prices. Now things are breaking. America and Scandinavia have bought less bulbs this season than the year before, while Russia, Austria and Germany have been out of the market. The Dutch Bulb Exporters' Association has had control of affairs, but there seems to be a strong tendency on the part of several members to break away, with the result that prices are likely to drop. In any event, the gambling in bulbs which has been going on in Holland for some time seems to have been stopped to a large extent. Last year, according to all accounts, Haarlem was a hotbed of speculation and feverish buying at this time. This year nothing of the sort is to be found, resulting from the fact that competition among exporters for stock is much less intense, and indicating that the failure of America, England and other countries to buy up to the expectations has felt, as well perhaps as showing, that a more normal condition prevails. As a matter of fact, stocks are said to be ample and the bulbs in good condition, due to an early and fairly long season of growth, with plenty of rain and sunshine.

STRAY NOTES ON SWEET PEAS.

By George W. Kerr.

The flower lover, especially he who makes a hobby of any one flower, is always interested in new varieties, therefore to those who have not had an opportunity of testing, or seeing the majority of the later introductions, the following notes may be of some value. The novelties I refer to in this case are, of course, Sweet Peas, of which quite a number of exquisite sorts have been put in commerce during the past few years. Owing to the conditions which prevailed during the past two seasons the pressing need of concentrating on, and if possible, enlarging the utilitarian part of the garden, (in so many gardens flowers having to make way for food crops) has naturally resulted in retarding our acquaintance with flower novelties. Happily we are gradually getting back to normal conditions when flowers will once more hold their rightful place in the garden, and novelties of merit will be eagerly welcomed.

The varieties named are only a few of the many I have passed through my hands during the past two years. They are, however, in my opinion the best of those I have been privileged to try out.

Elegance is a winner in the lilac blush section in which Agricola so long held sway. It is an extremely vigorous grower, most free flowering, bloom of great size and invariably borne four on a stem. Whether for garden or exhibition purposes this is well worth a place in even the smallest collection.

Mrs. G. W. Bishop is a distinct shade of cerise, in fact quite a new color in this section. With flowers of good size, it makes a first-class exhibition variety, though I much prefer Hope, the color of the latter being more pleasing, while the flowers are quite as large and it is a splendid "doer."

Sparkler is a strong rival for the place previously held by Dora. Most floriferous, a strong grower, with flowers of great size, the color is a pleasing shade of rose-pink and cream. Recommended for garden and exhibition.

Tangerine is decidedly the best orange colored self; in size of flower and freedom of bloom, easily head and shoulders above its nearest rival. The color is rich warm orange without any suspicion of pink or scarlet. Must be included in any "best twelve" collection.

Valentine is a charming shade of blush pink, and worthy of a place in all collections. The flowers are large and beautifully formed.

We are Headquarters for the BEST OF EVERYTHING IN VEGETABLE SEEDS

Cecily is a pleasing shade of light cream pink. First-class under perfect weather conditions though inclined at times to become rather "washy."

Liberty is quite a good salmon self, slightly deeper in color than Barbara.

Mrs. Tom Jones is a decided acquisition in the light blue section. Of good size, plenty of fours, and a sturdy grower. A fine shade of clear light blue, it is a leader in this section.

Alex Malcolm is, so far as color is concerned, in a class by itself, and may be described as a glowing scarlet-cerise. Outstanding in every way. It was raised by the celebrated Scotch Sweet Pea expert and named after him by the firm to whom he sold the stock.

Royal Salute, a deep fiery cerise, is another outstanding novelty. Flowers of good size and magnificent form, the color becoming intensified in bright sunny weather.

Excelsior is another good cerise but it appears to lack size and as noted I was not particularly impressed with its qualities when compared with others of practically the same shade.

Jack Cornwall V. C. So far this is the best dark blue. The flowers of dark blue varieties have been on the small side but in this novelty we get size of bloom and a particularly rich deep shade of blue. This is a quite an advance.

King's Lavender. This is a really first-class lavender lacking any rose suffusion, therefore clear in color. Flowers large and usually borne in fours. I was particularly well pleased with this novelty.

Edith Cavell. Color a rich shade of rose-pink on cream. Most attractive and pleasing but I prefer the next named.

**Flowers Under
Glass**

If you are growing *Lilium speciosum* and *longiflorum* for summer flowering, give them a house without much shade, and be sure that at all times they have all the air they need. It is important to examine the pots two or three times a day in order that they may not lack for water, and when flowers begin to open the pollen must be removed before it discolors the petals. Green fly often does much damage in lily houses, and can be kept in subjection only by constant fumigation. On bright days until the flowers begin to open they should be well syringed. Probably some of the tall lilies will require staking. When the lilies are pretty well out, they can be shifted to a cool cellar. Now that the weather is warm the lilies may be expected to open rapidly and will require close attention.

This is an excellent time to buy small plants of vinca and English ivy, getting stock in 2 and 2½-inch pots and planting them out in the fields. Put them about a foot apart in the rows, and have two feet between the rows. Cultivation must be kept up, of course, all summer, in order to have good stock by fall, but they are not hard to handle except for hoeing. In September you can lift the plants and put them into 4-inch pots in a cool house. Many florists find a carnation bench a good place for them, allowing them to droop over.

Keep your sweet peas well cultivated, with a regular watering once or twice a week. This watering is of special importance when the weather is at all dry. If you want to force them along a little, use a little nitrate of soda and wood ashes between the rows just before applying the water.

You may find it necessary to do some more whitening on the palm houses, as the rain usually washes off much of the shading during the spring months. This is an important matter because with the coming of warmer weather many palms are easily scorched. When you go over the old stock washing both sides of the leaves, remove every defective leaf as you come to it. If you don't use too much pressure, an overhead hosing on

clear days may be given to advantage. In this way you can keep the foliage free from dust and also prevent the spreading of scale. Remember that the palms need plenty of moisture, and an abundance of air, now that the days are warm. By the end of the month the work of repotting large palms will be completed. When larger pots are not required, it is still a good plan to remove some of the old soil from the roots, replacing it with fresh earth. Fibrous loam, three parts well rotted cow manure, one part, with a 5-inch pot of bone meal to a barrow load, makes a good compost for palms.

Many florists find it a good plan to plant some of their side benches with 3½ or 4-inch stock of Boston ferns. In fact, the smaller sizes may be used to about as good advantage. Give a foot of space between the plants and shade the glass a little. Other growers plant out the ferns in frames, and this plan is not to be overlooked, although quicker results are obtained by bench culture indoors. Remember that the small ferns should never be allowed to get dry at the roots, for the effect will soon show on the foliage. You will need to give them a good syringing morning and afternoon, and shift them as fast as they need attention until you have them in from 5 to 7-inch pots.

This is a good time to make a compost heap, and it pays every grower to have an abundance of compost always ready. Never handle the soil when it is wet, however. This mistake is often made, but the results are bad. Have a dry place for the soil pile and have enough to last until fall.

SQUIBS.

Seed dealer—I would like a few colored illustrations of radishes and tomatoes.

Artist—Life size?

Seed dealer—No, catalogue size.

May has departed, and about the only good thing we can say of it is that it contained five pay days.—

CORNUS CONTROVERSA.

This is a widely distributed tree in Japan, Korea and western China. In western Szech'uan Wilson photographed a specimen sixty feet high with a trunk seven feet in girth. In the Cornus collection on the right-hand side of the Meadow Road plants raised from seeds collected in western China by Wilson in 1907 are now in bloom, but the largest of these Cornels in the Arboretum is in the Peters' Hill Nursery. This plant was sent here in 1913 by the Park Department of the City of Rochester, New York; it is now about twenty-five feet high with a short trunk and a head twenty-six feet in diameter; the branches are long, crowded, and spread at right angles with the stem, drooping slightly at the ends, the lowest sweeping the ground. The upper side of the branches is thickly covered with the flat flower-clusters six or seven inches in diameter, and raised on erect stems. The flowers are white or white faintly tinged with yellow, and are followed by black shining fruits which are eaten by the birds as fast as they ripen. As it grows on Peters' Hill this Cornel is a magnificent plant and the handsomest of the genus in the Arboretum with the exception of the species with white floral bracts represented here by *Cornus florida* and *C. kousa*.

To the student of botanical geography *Cornus controversa* is interesting as another living witness of the relationship between the floras of eastern Asia and eastern North America. For in the genus *Cornus* with many species there are but two with alternate leaves, *Cornus controversa* in eastern Asia and *C. alternifolia* in eastern North America. *Cornus controversa* was growing in the Veitche's Nursery near London in 1880, but it has remained little known or understood in gardens owing to a confusion of this species with *Cornus macrophylla*, a Himalayan and eastern Asiatic tree with opposite leaves. Other trees which add beauty and interest to the Arboretum at this time are three *Viburnums*, the eastern American *V. prunifolium*, which has already dropped its flowers, and *V. Lentago*, and the Japanese *V. Sieboldii*.

Not many small trees are more useful than these American *Viburnums* for the decoration of American parks and gardens, and fortunately nurserymen realize this fact and now grow them in large quantities, especially *V. Lentago*. The flowers of *V. prunifolium* are whiter than those of *V. Lentago* which are faintly tinged with yellow, but the flower-clusters and the leaves of the latter are larger.

RICHARD H. LOVE.

Richard H. Love, 14 Elmsmere avenue, Lynn, Mass., died recently, after a lengthy illness. He was a resident of Lynn 35 years, and he conducted a florist business on Michigan avenue, East Lynn, for 25 years. He won many prizes at flower shows in Boston. He is survived by his wife Mrs. Love and a sister living in Dorchester.

Little Talks on Advertising

Some especially good advertising has been coming out of Detroit recently. One of the most striking is that of Fetters, of Adams avenue E. and Woodward street. This advertisement is reproduced herewith in order to illustrate its unconventional character. Without saying much about it, it suggests flowers for June weddings, and while very simple in its design is certain to attract attention in a pleasant way. The Bluebird tag which Mr. Fetters uses is another excellent idea. Its constant use makes it very familiar to the public and becomes invariably associated with the Fetters business

The Strand Co., of Detroit, often gets out artistically composed advertising copy and succeeds in enlisting the co-operation of the printer to the extent of having it set up in attractive type. In the firm's Mother's Day advertising it had what seemed to me like a happy thought, which was expressed as follows:

"There is individuality in flowers as well as in persons. To artistically express the sentiment of Mothers' Day in flowers is a privilege our artists take pride in executing." To people who prize quality and like to have some-

thing a little out of the ordinary, this simple paragraph makes a strong appeal, for it suggests that the flower offering, whatever it may be, will be prepared by an expert and will show character as well as good taste, the latter always being expected, while the former is often missed.

It is the height of folly to write over the heads of your prospective custom-

ers or to deal in phrases which they do not understand. Good, plain English, expressing an appeal which will go to the hearts of the readers, is what makes advertising successful. A recent expert expressed his opinion of the matter as follows in the Retail Public Ledger:

"The advertiser must do more than study advertising. He must study man—and especially woman. Advertising is successful only in so far as it strikes the responsive chord of public opinion. As good advertising is inseparable from the store itself, at all times it must co-ordinate its appeal with the spirit and purpose of the establishment behind it.

The public be served. That is the slogan of intelligent advertising. The advertiser who has grasped this fundamental principle goes about the preparation of his message with his mind concentrated on the recipient of the message. He thinks less about how he is going to tell the story than about how the reader is going to listen to it. He has in his mind's eye the typical man or woman he expects to read his ad., and strives to reach that person's interest and reason in the most direct way."

After 27 years of business, Mr. George Waldbart, of St. Louis, has retired, but the business will be continued by his former employees on a percentage basis, and the firm will be known as the George Waldbart Floral Co.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Every year gardeners in New England are impressed with the lack of hardiness and vigor in most of the rhododendrons which are in cultivation. A hardier race is needed for colder sections of the country. Rhododendrons under present conditions are much less satisfactory than is to be desired. This fact is evidenced by the condition of the plants at the Arnold Arboretum this season. While they are making an attractive display to the eyes of the layman, the observant gardener notices that they are patchy and by no means up to standard. None of the plants were killed outright by the severe winter, but many had their branches broken down by the weight of the snow and ice, while the flower buds of some of the hybrids were injured. *Rhododendron carolinianum*, from the southern Appalachian mountains, which was introduced some years ago, and had been featured by Harlan P. Kelsey, of Salem, has proven itself a good New England subject. In the Arboretum it was the first species to open its buds this year, and the small, rose colored flowers made a good appearance. Some forms of hy-

brids of *R. caucasicum* were almost as early, and in the opinion of Professor Sargent, *Boule de Nieve* is the most satisfactory of these plants for immediate cultivation. It has proven itself entirely hardy and seldom fails to flower. *Mt. Blanc* is also satisfactory, and while somewhat dwarfer than *Boule de Nieve* has larger flowers. *R. Smirnowii* came through the winter without any injury to the buds, and has been blooming well the last two weeks. Its handsome pink flowers make a very desirable rhododendron for Massachusetts gardens, and it seems to have possibilities for hybridizing because the heavy felt covering on the under part of the leaves renders it immune to all attacks of the lace winged fly.

The display of rhododendrons at the Arnold Arboretum was enjoyed Thursday by many people who participate in a public walk conducted by Professor J. G. Jack, of the Arboretum staff. These walks, by the way, have served as a pleasant introduction of the Arboretum to a great many people, and Professor Sargent, the director, has been warmly commended for making

them possible. Even with a guide book it is difficult for strangers to appreciate all that the Arboretum offers, but with an authority like Professor Jack pointing out the shrubs of special interest, a walk through the grounds becomes a rare treat.

One will have to go far to find a more enterprising body of men than the Chicago Florists' Club, and one of its activities this season has revealed this fact even to the general public. Mention has already been made in *Horticulture* of the action of the club in distributing booklets on spraying and on the making of vegetable gardens in order to promote the cultivation of vegetables in a much greater degree this season, when food products are sure to be badly needed. A copy of "Garden Pests and Their Control," one of the booklets which is being put out, has come to hand, and is found to be remarkably complete and valuable. Among other things this booklet contains sixteen pages given over to colored plates depicting almost all of the insect pests which feed on vegetables, fruit trees, berry bushes and grape vines. With these plates one can readily identify any bug or worm which he is likely to encounter in his garden operations. He will also find carefully colored illustrations of fungus troubles. Altogether this booklet on garden pests which is gotten out by

the Corona Chemical Co., of Milwaukee, Wis., is to be highly prized by all gardeners who possess it, as offering them important first aid in dealing with garden difficulties of all sorts.

More and more are women showing an interest in horticultural matters from a professional viewpoint. The various horticultural schools for women are being well attended, and some of the agricultural colleges are now providing for women students. At a recent meeting of the Worcester Garden Club, Mrs. Crocker, of Brookline, made an appeal for the interest and support of Worcester women in the new dormitory for women at Massachusetts Agricultural college. The legislature, it seems, has granted an appropriation much smaller than that asked for and equal only to building a very modest dormitory for the housing of 98 students. The equipment for the building must be furnished by funds raised among people interested in the project of training women in farming and dairying. Mrs. Crocker's appeal was forcefully and interestingly made, and her charming personality lent pleasantness to the usually unpleasant task of asking for money. Her suggestion was that Worcester women who are fond of motoring, should drive up to Amherst

some afternoon and look over the site and building to see for themselves how beautiful is the country about there, and how necessary is the proper furnishing of the house.

DROWSY FLOWERS.

The South African flowers which are opening their eyes at Hillcrest this summer are drowsy or 'sleepy' flowers. They shut up at night and do not fully wake unless it is a bright, sunny day. The blue daisies or charies have a peculiar way of going to sleep. They roll up their blue rays close to the yellow disk so that early in the morning all that one sees is the yellow centre, then as the sun comes out they spread their rays. Some of the charies have blue disks, some yellow. The iceplant or mesembryanthemums, the seeds of which were sent us, vary much in color, pink with a white eye, buff, white, salmon-color and crimson. The dimorphotheca are a pure white, larger than an oxeyed daisy or white weed, and with a dark plum centre. They also close together at night, but do not curve back their rays like the charies. The senecis elegans or ragwort does not close its aster-colored flowers but holds them open in pretty, loose corymbs. It is a flower which teases one in the garden as to the color of the vase in which

it could most becomingly be placed should it be a soft cream or a dull gray or green best to set off its charms. Like the Cercis or Judas tree it needs its especial setting.

These flowers of the sunshine we are told grow in a climate where the winters are like those of central or southern California, with very little or any frost. The letter from which this account of the climate was written was dated Mulders Vlei, Cape Province, South Africa, April 2nd, 1920, and continues, "My garden is now quite gay with autumn roses, zinnias and verbenas. Chrysanthemums are now about to blossom. The native flowers or annuals must soon be planted."

Just now I saw two boys on their way to the aviation field looking at my garden. I called their attention to the mesembryanthemums and told them that those flowers went to sleep in Africa and that they had waked up in Weston. How little conscious they had been of the time they went to seed and rose again in Weston.

M. R. CASE

Hillcrest Gardens.

George Watson's Corner

"You in your small corner and me in mine."

Charles P. Poryzees has had to move from his old location 15th at Chestnut street on account of building alterations. The Polies and Poryzees forces are now combined at 1420 Chestnut street.

J. Horace Macfarland diffused sunshine among his fellow rose lovers here the other day. We learn indirectly that there are other things besides the billboard that excite his Penellian indignation. This time it is the Social Tramp, that needed some explanation to us common mortals. He explained that it meant a wealthy person with no responsibilities. A rich hobo who wouldn't even join the Rose Society. Put him in the stocks! Twenty-five years ago a noted legal luminary of Philadelphia said that a man who didn't work, no matter how much money he had was a bum. J. Horace says it in more polite language than did Robert Lester Smith.

Samuel S. Pennock has been a busy man the past week or two. In addition to hard labor and much mental strenuousness at the flower show in his home borough of Lansdown on the 5th he was a figure on the 10th at the Reading show and on the 11th at Harrisburg. At the latter city he was a specially appointed judge in the rose section.

Early closing for the summer commences this year in the Pennock, Niessen and other cut flower markets on Monday the 21st inst. Daily 4 P. M. except Saturdays. Saturdays 1 P. M. Closed all day July 5th—as Independence Day comes this year on a Sunday.

The employees of the Leo Niessen Company spent Sunday, June 13, as guests of the renowned Lilac grower Mr. Wm. F. LaCroix at his home in Buena, N. J. A special car attached to the 9 o'clock express to Atlantic City was chartered, and special arrangements were made for the train to stop at Buena. It was a merry part consisting of about 50 with a six piece orchestra to enliven the occasion that went on this trip. Mr. LaCroix had a large truck and six touring cars at the station to convey his visitors to his home, and after his

home was reached there was not a dull moment for anyone until it was time to leave in the evening. Everyone present enjoyed themselves to their full capacity. Mrs. LaCroix saw to it that the creature wants were well supplied, and the very best of everything was provided by her for that purpose. Mr. LaCroix was presented with a platinum stick pin, and Mrs. LaCroix with a gold bar pin as a little token of appreciation from their guests. The whole party agreed that they had a most delightful time, and that Mr. and Mrs. LaCroix certainly knew how to entertain their guests to make them want to come again. The orchestra furnished music all during the day. Dancing and other amusements were indulged in and refreshments were served continuously, and a big dinner was served about 4 o'clock. The arrangements at the Philadelphia end were capably taken care of by Harry Eisele. The presentations were made by E. P. Klinger, and Mr. LaCroix responded for himself and wife in his happiest vien.

Visitors—E. P. Hosbetter, Manheim, Pa.; F. L. Wertz, Roanoke, Va.; L. B. McCausland, Ross Bros. Seed Co., Wichita, Kans.; M. C. Wright, Lord & Burnham Co., Chicago, Ill.

Berger Bros are now comfortably established in their new quarters at 1609 Samson street. Outside and inside there is an air of finish and prosperity that is very cheering. The firm leases the whole of the three story building but sub-lets the two upper floors. An increase in their staff, among whom we notice the familiar face of Stuart Miller, a well known live wire, has

been necessary recently to take care of this rapidly increasing business. We extend our congratulations and best wishes.

George Auegle leaves on the 19th inst. for a ten-day vacation at the seashore. He has been up against it physically the past year with the flu, and lumbago and other ills, and will enjoy the salt sea breezes which we trust will do him a power of good.

GENERAL NEWS NOTES.

The Malvern Flower Shop has opened for the summer at Bangor, Me., being in charge of Mrs. Margaret Dyer.

Hoffman, the florist of Boston, has again opened his Swampscott store, which is well stocked and makes a handsome appearance. He recently had the decorations for an important affair held by the Carpenter-Morton Co., Swampscott.

The tenth annual convention of the California Association of Nurserymen will be held at Fresno, Nov. 11-13.

A meeting under the auspices of the American Flower Growers' Association is to be held at the old Kellogg Greenhouses, Pleasant Hill, Mo., on July 4. It is expected that a local organization will be formed at that time, and J. P. Ammann, of the National Association, will probably be on hand to make one of his rousing enthusiastic talks.

Baur & Steinkamp are erecting another large greenhouse at Indianapolis, putting it up directly over a carnation field, which will save much replanting.

ARNOLD ARBORETUM HYBRIDS.

Except with roses, no attempt has been made at the Arboretum to produce hybrid trees or shrubs. Several hybrids, however, have appeared here from time to time, and the following, of which descriptions have been published, or will be published, are now well established here. Such hybrids are always interesting, and among those which have appeared in the Arboretum are a few which are more valuable than their parents, and in two instances at least the handsomest garden plants in the genera to which their parents belong. The Arboretum hybrids are *Pterocarya Rehderiana*, *Sorbus arnoldiana*, *Forsythia intermedia*, *primulina*, *Malus arnoldiana*, *Malus rubriflora*, *Malus Dawsoniana*, *Prunus arnoldiana*, *Pyrus congesta*, *Cornus arnoldiana*, *Betula Jackii*, *Viburnum Jackii*, *Berberis notabilis*, *Lonicera amoena arnoldiana*, and *Aesculus Harbisonii*.

Another Barberry, *Berberis ottawensis*, believed to be a hybrid of *Berberis Thunbergii* and *B. vulgaris*, which was first described from a plant in the Arboretum connected with the Dominion Experimental Farm at Ottawa, has appeared several times among seedlings in this Arboretum where it has proved to be a handsome and distinct plant. There is a large specimen of this hybrid on the right-hand side of the entrance to Azalea Path from the Bussey Hill Road. The most valuable of the Arboretum hybrids for general cultivation in this part of the world are *Pterocarya Rehderiana*, *Malus arnoldiana* and *Sorbus arnoldiana*. The *Pterocarya*, which is evidently a hybrid of the Caucasian *P. fraxinifolia* and the Chinese *P. stenoptera*, is much hardier than its parents and has grown more rapidly in the Arboretum than any of the species of this interesting genus of the Walnut Family. Several of these hybrid plants appeared here in 1879 from seeds sent from the Arboretum Segrezianum in France as seeds of *P. stenoptera*, so that although the plants were raised here the crossing of the two species occurred in France. The grove of these trees which shades a stretch of Hickory path near Centre street is one of the most interesting and attractive groups in the Arboretum. The trees send up many suckers from the roots and for several years have flowered freely and produced fruit.

Sorbus arnoldiana, which appeared here in 1907 among seedlings of Chinese *Sorbus discolor*, is a fast growing, vigorous tree already nearly twenty feet tall, with smooth, lustrous, yellow-gray bark, erect branches forming a

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1878. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

broad compact symmetrical head, leaves with the narrow leaflets of Sorbus discolor, and the compact, slightly convex flower-clusters of Sorbus Aucuparia, as broad as those of S. discolor. The fruit is pink and in color unlike that of any of the species of Sorbus. This hybrid is the handsomest Mountain Ash in the collection where it has grown more rapidly than most of the species of the genus; and there now seems to be every reason to hope that it has enabled the Arboretum to add to the list of ornamental plants hardy in New England another tree as valuable as Malus arnoldiana. This tree, which appeared in the Arboretum many years ago, has been so often noticed in these Bulletins that it is not necessary now to more than repeat the fact that it is probably a hybrid of Malus floribunda and some other Asiatic Crabapple, probably one of the hybrids of Malus baccata; and that, in the judgment of many persons, it is the handsomest Crabapple now cultivated. Malus rubrifolia is the name which will be given to the hybrid Crabapple recently mentioned in Bulletin No. 5 of this volume. It finds a place in the list of Arboretum hybrids because it is now known that it was either raised from seeds gathered in the Arboretum or that it was a seedling pulled up from the neighborhood of the Arboretum plants of Malus Niedzwetzkyana. These Arboretum hybrids show that new plants may appear spontaneously in any large collection of cultivated plants, that such spontaneous hybrids are sometimes valuable and that others, although interesting, can add little or nothing to the beauty of gardens. They show, too, that if the fertilization of the flowers of one plant by the pollen from the flowers of a different species or hybrid can produce such results as Sorbus arnoldiana and Malus arnoldiana, systematic and intelligently directed hybridization might with the abundant material here produce plants more beautiful than any now known in our gardens.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 8,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Old Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely Illustrated 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN.

Not all the plays upon "Say it with Flowers" made by a friendly press come to the attention of our Promotion Bureau, but it is gratifying to realize that it is being used continuously, and in this way, we are helped in our efforts to perpetuate the best slogan ever created in the interest of an industry. It was even used by special writers in recording the doings of the recent Republican Convention, as the following taken from Neal R. O'Hara's columns, and published as syndicated matter in the New York Evening World, as well as many other newspapers: "The guys that framed the platform certainly 'said it with flowers.' There are plenty of bouquets for the 'G. O. P.'" The slogan was used the same week as a caption for a humorous illustration in "Life." In "The Youth's Companion" July Bulletin, a little monthly organ of the publishers widely circulated, a little squib suggests, "If you must protest against great wrongs and injustice on every side, why, 'Say it with Flowers.'" We are always pleased to note instances such as these, and we are sure all interested in our campaign share our pleasure. They prove beyond a doubt that our slogan has been accepted, and that our efforts to put it over have been successful. One of the clippings we have referred to was brought to us by a publicity expert of national reputation. "Your slogan is marvelous. Use it how you may, there is a suggestion of one of its many interpretations." He was right. Had our campaign no other result than the popularizing of this slogan, such result would have been worth all the hard work and expense entailed in accomplishing it.

Very many florists appreciate this success. Many more do not seem to realize our advantage and are apathetic in their views regarding our campaign. Surely, the time has arrived for shaking off this indifference, and warming towards our work. Our committee has been able to do in part what they started out to do. They could have accomplished all had they been given the support they had a right to expect. Instead of the good, deep scratch on the surface of the field of possibility now making itself apparent, the field might have been yielding a rich harvest for every

florist laboring in it and this harvest is yet within reach if the florists will but help. Instead of enjoying our benefits on the instalment plan, we could have them in a more appreciable way. If the committee's plans for our fall publicity can be carried out to the full, we can in the coming season accomplish completely what, so far, we have only been able to do in part. Our fund at this time only amounts to less than half of what was required. If all those who have not yet subscribed, would render the little assistance asked of them, it would not take long to make up for lost headway, and we would proceed to our goal conscious of the fact that success would most assuredly be ours. In your own interests, Mr. Non-subscriber, and in the interests of your industry, you should delay your support no longer. To make permanent the good effect of the campaign so plainly apparent, we must continue with our publicity work, and to do this we need money, your money, to help build up your business through the stimulation of a demand for flowers which until our campaign started was dormant indeed. Help us to help you.

JOHN YOUNG, Secy.

PREPARING PEONIES FOR THE SHOW.

Writing in the *Mineola Horticulturist* W. F. Christman, secretary of the N. Y. Peony and Iris Society says:

"Considerable experience is necessary to cut the flower just at the proper time, but by a little experimenting with the different varieties you will be able to arrive at the proper time. I had very good success last year by cutting the flowers just as they started to open, putting them in a pail of water and placing them in a large refrigerator in my neighbor's meat market. The temperature was about 40 degrees, and they kept nicely for over a week, some of them for a longer time.

"By holding your varieties back in this manner you will be able to stage an exhibit of early and late varieties that would be impossible under other conditions. Flowers so held can be watched and if you find some of the buds are not developing as fast as they should, they can be brought to the light and given more warmth, when they will readily respond. Flowers held in cold storage are usually removed the evening before the exhibition or very early in the morning the day you intend to display them and placed in the sun light where they will get plenty of warmth. Buds that seem to be slow in developing into an open flower can be hurried by gently shak-

ing the stem, taking a firm hold of the same directly below the bloom.

"At a later date I intend to write an article on the handling of flowers in cold storage and will go into the matter in more detail. You will be surprised to see what satisfactory results can be obtained by using this method of holding in check your bloom. Very warm or hot water will often revive a flower that looks hopeless and put it in the prize winning class."

MRS. NORVAL E. KIRBY.

Lida Virginia Learned, wife of Norval E. Kirby of the firm of I. N. Simon & Son, the Philadelphia seedsmen, died at her home in Mt. Airy, near Chestnut Hill on the 17th inst. Mrs. Kirby had been a sufferer from tumor of the brain for several years and this and other complications finally carried her off. She leaves, besides her husband, two daughters, one five the other fifteen years of age. Interment took place at Ivy Hill Cemetery on the 20th inst. The sympathy of the trade is sincerely extended to Mr. Kirby and his sorrowing family in their great bereavement. Mr. Kirby is well known far beyond local lines, having been for many years a distinguished member of the forces of Peter Henderson & Co. before becoming a partner with Mr. Simon. Mrs. Kirby hailed from Danbury, Connecticut.

GENERAL NEWS.

In a recent report of news matters in Clinton, Mass., one of the newspapers said that Sawyer the Florist in his Memorial Day trade sold 35,000 pansy plants and over 88,000 forgetmenots, 53 baskets of pansies going to Clinton military circles.

The Kentucky Society of Florists has planned its annual picnic for July 22 at Blackstone Mills. The committee in charge is Lewis Pleiss, Geo. L. Nance, Charles Mathis and Emil Walther.

Mrs. Ella Grant Wilson of Cleveland is making a trip to California, stopping at Denver and other cities along the route.

At the recent meeting of the American Peony Society at Reading, Mass., the old officers were re-elected as follows: President, Lee R. Bonnewitz, Van Wert, O.; Honorary president, C. W. Ward, Eureka, Cal.; Vice-President, A. H. Fewkes, Newton Highlands, Mass.; Secretary, A. P. Saunders, Clinton, N. Y.; and Treasurer, A. H. Scott, Front and Market streets, Chester, Pa. The Board of Directors for the new year includes the President, Vice-President, Secretary and Treasurer, ex-officio, and B. H. Farr, R. T. Brown and T. A. Havemeyer.

THE MARKET.

There is no lack of flowers in any of the markets although the continued dull weather has tended to limit the output of the growers to some extent. Reports from the different cities show that the market is fairly steady without any special outstanding features. To some extent class days and weddings and other functions have helped to keep up the demand and prices.

Peonies have been in good quality but the sales have been only fair. They brought from \$3 to \$5 in most of the markets, although Pittsburgh reports them selling up to \$6. In Boston they have ranged from \$5 to \$6 the last week. Gladioli have sold from 75c to \$1.50, and the demand is not very strong. Roses as usual run all the way from a low price like 4c for short-stemmed stock to 20c for Beauties; in fact some Hadley as well as Beauties have sold in Boston up to \$25. Carnations have been bringing from 2 to 4c in Boston, and that is the average in the other markets. Callas are about 10c. Sweet peas sell from \$1 to \$2; Pittsburgh reports them as high as \$3. Snapdragon are short in Boston and are selling for 75c. They are reported out of the market in Pittsburgh.

Altogether the trade is very quiet and is likely to continue so for some weeks.

FLORISTS' EXCURSION

A Unique Plan is Suggested by R. C. Kerr.

The following letter speaks for itself:

"I have been thinking for sometime of inaugurating an excursion during the month of March of next year, through Texas and other southern states. Before going too far into details, I would like to have an expres-

sion of the florists in the different sections who would be interested. The object of this excursion would be to familiarize the florists throughout the country who will make the trip, through Texas and the South in general, and to let them know what we have in this section of the country, in order that you may thoroughly understand the wonderful possibilities of our great southland.

While we have not gone into details, I have given some thought to the matter. Would suggest that we make up a special train leaving some central point, possibly Cleveland, which will be a better mobilizing point for the florists from the East, and also around Detroit and Chicago, and then take up the florists in St. Louis and add to our party as we come down the line.

It strikes me that this would be a great opportunity for an excursion composed exclusively of florists and the allied trades to enjoy a wonderful trip during the month that affords great possibilities and see the country at the time of the year when the florists can get away and when the climate conditions are ideal.

Would suggest that we go as far south as the Brownsville country and also suggest the following itinerary:

Cleveland to St. Louis, St. Louis to Kansas City, Kansas City to Oklahoma City, Oklahoma City to Dallas, and Ft. Worth, Waco, Austin, San Antonio, Houston, Galveston, Corpus Christi, and Brownsville. Returning via New Orleans and if arrangements justify to go so far as Atlanta.

This is a tentative proposition. Are you interested? Have you any suggestions to make? I would be pleased to hear from as many as possible by the time our Texas State Association meets in Ft. Worth in July. This move will be sponsored by the State

Association if sufficient interest is shown.

We have nothing to sell you and there is nothing behind this move except to show you our country. Going in a party and as a train the expenses would be materially reduced.

Please let me hear from you at the earliest possible moment.

Yours very truly,

ROBT. C. KERR.

The greenhouse at the University of Orono, Me., are now in charge of D. M. Beal, who was formerly at Cromwell, Ct.

The Pennypack Greenhouses, at Holmesburg, near Philadelphia, have been purchased by Dave Allman, formerly of Cornell University. Possession has been taken the first of June.

THE TALK OF THE TRADE

Mr. Butterworth, of Framingham, has certainly been adding to his laurels at a remarkable rate during the last few months, although he has long been known as one of the most enthusiastic and successful growers of orchids in the country. His display of Miltonias at Horticultural Hall, last Saturday, was an event of the greatest interest to every devotee of this magnificent plant. Unless I am mistaken no such exhibit has ever before been seen in this country, and I doubt if it ever has been surpassed in Europe. This applies both to the size of the exhibit and the quality of the flowers. The latter was the subject of many remarks from orchid enthusiasts who were present. The whole display, with its even tone of color throughout, would have been glorious under any circumstances, but banked as it was with evergreens in the most artistic manner, it made a picture of surpassing beauty. Mr.

Butterworth said that the commercial value of the flowers in the group was about a thousand dollars, and certainly he is to be complimented on his enterprise and public spirit in making such a display.

Southern florists have been having a very prosperous season and are in good spirits, according to the reports of Mr. L. W. C. Tuthill, of New York, who has just returned from a long trip through the southern cities. While the trip was not primarily in greenhouse interests, Mr. Tuthill came in contact with several members of the trade. "In Dahl's Flower Shop in Atlanta," said Mr. Tuthill, "I had a little chat with the manager, and also visited Nunally's Candy Store next door. Mr. Nunally also sells flowers. I asked the Dahl people if this affected their trade any. They said it most assuredly did. It helped them tremendously to sell

more flowers. When I talked with the candy man he said the more flowers they sold the more candy they could sell. During the Christmas trade their buyer had spent the entire week previous in Chicago endeavoring to get sufficient flowers to supply the demand.

"In Richmond I had a talk with Mr. Ratcliffe, of Ratcliffe & Tanner. Their shop is well up on the main street. When Mr. Ratcliffe moved up there most of the wise heads among the florists looked on and said he would never make a go of it. However, he has developed one of the finest businesses in the city. When conferring with him about it, he said he didn't move up there to get away from competing florists, for as a matter of fact if there were more shops around him he would do more business. All he would want would be a door leading into his store and he would take a chance on the business the other stores were doing to make more business for him.

"Considering the tremendous chan-

Hybrid Miltonia, St. Andre

ges in general throughout the South," continued Mr. Tuthill, "it would seem that flower interests should like all other lines have a very fertile field there. Of course the South has been bankrupt for so many years that it's going to take them a little time to readjust themselves to logical competition. By logical I mean that in the last couple of years there has been an element of hysteria in buying that will have a certain reactionary result for a year or so. Frankly, if I were a young man starting in business, I certainly would look southward rather than westward. When you consider that practically half of the agricultural products of the country were grown last year in the South, you begin to see that it is not only a cotton growing country but one of suprisingly diversified crops. This is further borne out by the fact that North Carolina stands fourth in agricultural products. Considering this fact in relation to the other three states, and you see its significance. Texas comes first, Iowa second, Illinois third, and North Carolina fourth.

"Last year, when I made a trip through the South, on a similar trade investigating purpose, I gave special consideration to Atlanta as an advisable location for greenhouses. Seems to me that everything tended towards its logicalness. As a distributing center, it is strategically located. Coal is reasonably cheap. Soil is good. It is far enough north to be free from the overwhelming insect pests that make greenhouses impractical from a commercial standpoint farther South."

Friends of Mr. Jelle Roos are congratulating him on his new location at Concord. On the farm which he has secured there he will have much more room to expand than in the limited quarters which he had in Milton. Mr. Roos has already become well known through his skill in growing gladioli, and bids fair to become one of the leading men in this branch of the trade in the East. Doubtless his Concord location will become the mecca of many gladiolus enthusiasts. He will have as a comparatively near neighbor Mr. Charles Fairbanks, of Lexington, an amateur gladiolus grower of more than local fame.

I understand that the Florists' Telegraph Delivery Association is about to establish a monthly organ to be devoted particularly to retail dealers. It is to come out once a month and is to be edited, I suppose, in Detroit. Doubtless the sponsors of the new publication have taken into consideration all of the factors involved and feel that they are making a move which will be to the in-

terest of the F. T. D. members. I seriously question, however, whether this is a suitable time for launching such a venture. With old established publications finding it almost impossible to obtain paper, with printing costs constantly mounting, and with countless other difficulties besetting publishers, it seems as though the officials of the D. T. D. were inviting an amount of labor and an expenditure which is not altogether necessary. However, we shall give the new paper a hearty welcome, and very likely the trade will contribute enough advertising to make it self supporting.

Continued cloudy and rainy weather has already shown its effect on carnations in the field with the result that there will probably be quite a little stem rot this season. At best there is not a large supply of field-grown carnations, and this loss is going to bring the crop down to a lower point. A grower who is fortunate enough to have his plants on high, light ground will of course suffer less, but up to this time we have gone through a spring with more than average rain, lower temperatures and of course cloudy weather.

I believe that the sooner the grower gets his stock into the houses the better off he will be as there is sure to be a soft growth, and later on when we do get the strong sun and very hot days, the plants are going to suffer.

BOOK ON ROSE GROWING

Practical Book of Outdoor Rose Growing, by George C. Thomas, Jr., published by J. B. Lippincott Co., Philadelphia. Price, \$3.00.

Since 1914 this book has been running through one edition after another. This is the second garden edition and contains an additional chapter entitled "Rose Development from 1917 to 1920." It is just what its name implies, a book of practical information for everybody who wants to grow garden roses out of doors. It contains, however, much of interest to even the most advanced rose growers. Moreover, whatever statements are made can be accepted without reservations, for Mr. Thomas has long been established as one of the most reliable authorities in the country, and his own work in hybridizing stamps him as a man well qualified to discuss the best varieties and to pass on the value of the newest offerings. Altogether this is a book which no rose grower,

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of the other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

amateur or professional, can afford to be without. As with most of Mr. Thomas' books, the illustrations are superb. They include several in colors, one of the most remarkable being a full page illustration of the new rose, Dr. Huey.

PEONY SHOW IN BOSTON

While three days of rain made it difficult to get a good collection of flowers for exhibition at the Peony Show at Horticultural Hall, Boston, last Saturday and Sunday, nevertheless a very good showing was made and was enjoyed by a large number of people.

In addition to the peonies, there were two exhibits of orchids, one made by Mr. A. C. Burrage of Beverly, continuing the series of displays he has been making this season. Mr. Burrage is certainly doing a fine piece of work in all these exhibitions which are proving a magnet for flower lovers in large numbers, and which are remarkable, not only for the quality of the flowers themselves, but also for the superb way in which they are staged.

In the larger hall Mr. Butterworth, of Framingham, also had an orchid exhibit, which was confined exclusively to Miltonias. It was the best display of the kind ever made in Horticultural Hall, and Mr. Butterworth was overwhelmed with congratulations.

The list of prizes and gratuities awarded follow:

Theodore Lyman Fund No. 2

Herbaceous Peonies. Collection of 20 named varieties, double, one flower of each: 1st, George N. Smith; 2nd, T. C. Thurlow's Sons, Inc. Collection of ten named varieties, double, one flower of each: 1st, Arthur H. Fewkes; Specimen bloom, double: 1st, George N. Smith; Mons. Jules Elie; 2nd, Mrs. Percy G. Brown, Mme. Cabot. Collection of twelve named varieties, single, one bloom of each: 1st, T. C. Thurlow's Sons, Inc.; 2nd, McKissock Gardens.

For non commercial growers only. Collection of twelve named varieties, double, one flower of each: 1st, Robert C. Morse. Collection of twelve blooms, Pink, one or more varieties: 1st, Robert C. Morse. Collection of twelve blooms, white, one or more varieties: 1st, Robert C. Morse.

The American Peony Society's Medal -- For the largest and best collection of Peonies: T. C. Thurlow's Sons, Inc.

Gold Medal: J. T. Butterworth, superior cultivation of Miltonia vexillaria varieties.

Silver Medal: A. C. Burrage, specimen plant of Cattleia Mossiae.

Honorable Mention: T. C. Thurlow's Sons, Inc., seedling Peony No. 4; Hillcrest Gardens, six varieties of wild flowers from South Africa.

Vote of Thanks: Miss Cornelia Warren, display of hardy Roses, Poppies and Carnations; Hillcrest Gardens, collection of hardy perennials and shrubs; Mrs. Betty

K. Farr, Begonia Betty Farr, Miss Cornelia Warren, Onocidium crispum and Hydrangea otaksa.

Gratuities: McKissock Gardens, display of Peonies.

Cultural Certificate: Hillcrest Gardens, display of vegetables and fruit.

A RAINY DAY AT HILLCREST

Word came in the morning that one boy was ill at home with the mumps. We did not want the other boys to be ill, so kept them in out of the rain. They had cut up the rhubarb for canning and were waiting for the pine-apples and sugar to come.

We took the time, for reading the observation papers the boys had written earlier in the morning. Some spoke of the calasoma beetle they had seen running quickly up the trees. Another wrote of a calasoma beetle he had noticed in a cold frame, which beetle was covered with little red spiders. Another paper contained this account of the depredations of the gypsy caterpillars.

"While I was spraying last Thursday I noticed particularly the way that some of the young pines were eaten by the caterpillars. I did not know before the pines were touched by caterpillars but I think those insects will eat anything that is tender and it was the young needles just sprouted on the ends of the twigs which were infested.

"I think that when the gypsy moth is brought fully under control our woods will be fine looking, without holes in the leaves."

This paper shows that we need to give a study hour to the difference between worms and insects. It also shows that the boys are taught to use their eyes. In talking with one of the older boys about his life at Hillcrest, he said:

"Why, I care so much more about nature than do the other boys I meet. Do you remember the afternoon when we boys all climbed up into an apple-tree with Mr. Wilfrid Wheeler. I have known how to graft an apple-tree ever since I saw him do it. Then there was the day we hived a swarm of bees on the farm. I helped another

boy to hive a swarm of bees after that. I knew how to do it."

This morning a boy had written an n instead of an m in his paper, that little error led to an interesting talk about the alphabet, of how it had come down to us through the ages. Of how in the Mohammedan countries the script differed from ours, being more ornamental and in those countries where the sentiment of the people was averse to depicting life in any form, their buildings were decorated often by inscriptions.

Entered as second class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897

The conference at New York to consider quarantine 37 and the general attitude of the Federal Horticultural Board was the most dignified, the most representative, and should prove the most effective of any meeting of this kind which has been held up to date. It does not seem possible that the Federal Horticultural Board could fail to heed the significance of this gathering, for there were present in person or represented by signed communications, many of the most prominent figures in the horticultural world, and they represented both private and commercial interests, with amateur horticulturists of large influence especially active.

Many people have been wondering just how the Arnold Arboretum was affected by the quarantine, and what position it would take in the matter. At this conference a letter was read from Professor C. S. Sargent, the director, in which he said flatly that the Arboretum had decided to give up receiving any foreign plants until there was a modification in the rules of the quarantine board.

Everybody recognizes that this situation constitutes a serious menace to the future of horticultural developments in this country. The conference as a whole was very free from over-statements or expressions of undue resentment. In fact, it assumed a constructive form which gives promise of bringing about a modification of the board's arbitrary and drastic ruling.

There is good reason to hope that florists and horticulturists as well as farmers will fare well at the hands of the new Secretary of Agriculture. Everybody who has seen or talked with Mr. Meredith says that he has all the appearance of a strong man, yet one with liberal views and a disposition to see both sides of a question. Henry Penn, of Boston, said on his return from the advertising convention

at Indianapolis that Mr. Meredith made a greater impression upon him than any other speaker, and that in his estimation the secretary would make first class presidential timber. From the viewpoint of the horticulturist, however, it might be far better for Mr. Meredith to continue as secretary of agriculture rather than to sit in the president's chair.

It was suggested at the recent quarantine conference in New York that good results might come from a direct appeal to Secretary Meredith, and many people join in the belief that this would be a very wise and effective plan. Secretary Houston was a difficult man to deal with, and seemed inclined to accept the opinions of the board in preference to those of any other experts whatever their position, reputation or experience. Secretary Meredith is a man of different calibre, according to all reports, and would be both impartial and unbiased in his consideration of the whole question. Without much doubt, some sort of modification of the present rulings will be made, but of course nobody can speak as to their character, and in the meantime nurserymen hesitate to make any heavy investment looking to the propagation of material heretofore imported because they do not feel that they can do so without risking a heavy loss, considering the present unsettled condition of affairs.

The forty-fifth annual convention of the American Association of Nurserymen's Convention

men in Chicago this week is an interesting and important gathering. It is pleasant to find that the nurserymen are showing increased interest in the opportunities offered by co-operation and likewise a disposition to unite in a concerted movement to bring the trade into closer connection with the buying public. Undoubtedly a great many matters of prime importance will be discussed at this convention. A unique feature of the convention is the fact that no formal program has been arranged. President Moon and Secretary Watson hope that the new plan will prove to be an improvement over any yet tried out. They have learned in the past that a business organization like the Nurserymen's Association finds it difficult to confine itself to set speeches or to carry on its deliberations by the clock. The most important questions before the organization are brought up, one by one, and full opportunity for a thorough threshing out of all the pros and cons. If the plan works out as well as it is expected to, very likely other horticultural organizations will adopt it at their convention gatherings.

The trade in Canada is very much agitated over a proposition to change the name and constitution of the Canadian Horticultural Society. The proposition is to call it the Society of Canadian Florists and Ornamental Horticulturists. It is true that this seems a good deal like copying the name of the florists' organization in the United States, and yet in the opinion of many of the florists of the Dominion, it covers the ground better than any other, although in the opinion of some of the words "Ornamental Horticulturists" constitute a tail which might just as well be lopped off. In fact, a substitute name which has been proposed, The Canadian Florists' and Gardeners' Association, seems to certain members of the trade to be less cumbersome and more appropriate. At any rate, the present name is not suitable under present conditions, and without much doubt some change will be made at the next convention.

MAY CONTROL CHRYSANTHEMUM MIDGE

Greenhouse Owners and Others May
Use Measures Worked Out by
United States Department
of Agriculture

The Chrysanthemum midge entered the United States from Europe a few years ago and is now an established greenhouse pest, says the United States Department of Agriculture. It was first reported in this country from Michigan and is now known to be present in more than twenty States and in Canada. It is regarded as one of the most important pests to be reckoned with by chrysanthemum growers.

While principally a greenhouse pest, it occurs on outdoor plants even as far north as Ottawa, Canada. The injury to badly infested plants is such as to destroy their value for commercial purposes. In the tender portions of the plant are laid the eggs from which tiny maggots hatch. The maggots then bore their way into the plant tissues thereby causing galls. Apparently, this midge was brought to America without its quota of parasites and it is not yet certain that native parasites of gall midge fauna are preying upon it effectively.

Control Measure Worked Out

Many experiments have been conducted by the specialists of the department in working out control measures. The results are summarized as follows in Department Bulletin No. 833, just issued:

"From the life history, as well as from the experimental data thus far submitted, it is clear that certain points must be kept in mind to secure the best practical results. First, there are always several generations present in greenhouses during the spring and fall occurrences; second, the adults emerge and mate during the very early morning hours, and egg laying quickly follows; third, preliminary control experiments show that the egg stage may be controlled by means of spraying or dipping the cuttings or plants; fourth, it has been demonstrated that the adult can be killed easily at the time of emergence by consistent spraying; fifth, fumigation experiments in a commercial house proved that the adult is easily killed by fumigating either with nicotine papers or hydrocyanic-acid gas; sixth, experiments applicable to general propagation practices show conclusively that such measures offer a reasonable safeguard and protection against doubtful stock and infested material without injury to the plants.

ROSE DISPLAY AT MINNEAPOLIS

Dear Sir:—Members of the American Rose Society, and in fact all rosarians and lovers of roses, are invited to visit the Minneapolis Rose Garden at Lyndale Park, Monday, June 28, when it is expected that the Garden will be at its best.

The severe winter resulted in the loss of a good many plants, and the Garden is not as attractive as in former years, but most of the plants

are in good condition, and some of them are exceptionally good.

The display is well worth a visit, and all visitors may be assured a hearty welcome by those in charge.

The Minneapolis Rose Garden is one of the test gardens of the American Rose Society.

Yours very truly,

THEODORE WIRTH, Superintendent.

COMING EVENTS

Boston.—American Sweet Pea Society, annual exhibition, July 10 and 11. Sec'y, Wm. Gray, Bellevue ave., Newport, R. I.

Cleveland.—S. A. F. and O. H. annual convention, Aug. 17, 18, 19. Sec'y, John Young, 43 W. 18th st., N. Y.

Flowers Under Glass

If you have propagated stock of gardenias early they should be well rooted in 4-inch pots by this time. It is necessary to get the house or bench ready at once, and this means that you must put in a good supply of soil of the kind best adapted for these plants. Gardenias are quite particular as to the kind of soil they grow in, and thrive best when they have a compost composed of loam which contains an abundance of fibre. Care should be taken, however, to avoid heavy soil. A good gardenia mixture is made up of fibrous loam, three parts, and well decayed cow manure, two parts, with a sprinkling of bone meal. Be sure that the drainage on the bench is good. Some growers always provide for this by placing a layer of broken crocks on the bottom of the bench. Set the plants about fifteen inches apart each way, and firm the soil well around the ball. When the weather is fair the plants should have a good syringing at least twice a day throughout the summer.

Give the Pelargoniums a rest now. The best place for them is outside the house where they will be exposed to full sunshine. Gradually reduce the water supply and by the time the foliage has become yellow, the plants can be turned on their sides and allowed to remain for about three weeks, by which time the growth will be well ripened up so that they will be in condition to break again.

When the Cattleyas, including Mossiae, Mendelii and Warnei, are through flowering they should be repotted if necessary, using Osmunda fibre and sphagnum moss, always providing for plentiful drainage. Remember that these orchids like heat but dislike direct sunlight. They need moisture, too. In fact, they must never be allowed to suffer for lack of water. Give additional air from now on in the Cattleya house. This will mean, of course, that the house will dry out more and more and you will have to take pains to frequently dampen the walks. Syringing should be done overhead at least once a day. When a spell of damp weather comes on it will be necessary to keep a little fire heat.

Do not delay rose planting any longer than is necessary. With the kind of

weather which we have been having the last few summers there is always danger of wet, cloudy spells which are not at all favorable to rose planting. Wise florists make a point of thoroughly cleaning the house after the old soil has been wheeled out. In this way they side-step a lot of fungus trouble later on. The benches should be gone over with hot lime wash. With dark, rainy weather such as we have been having in plentiful supply, it is necessary to be careful about watering and syringing your plants, particularly if they are somewhat crowded. Take off all the yellow leaves and all spot that may be found here and there. It is a good plan to set the small plants to the south side of the bench and the taller ones to the north. Some varieties do not suffer badly from spot, but when it appears on American Beauty and Ophelia, the florist should immediately go through the house carefully, burning all leaves which he picks off and make a point of dusting the plants with slacked lime about twice a week, using a bellows or sulphur blower for the purpose. While you should ventilate freely both night and day, you should avoid strong draughts through the ventilators.

It is full time to be getting in your supply of freesias for July and August planting. Put six or seven $\frac{5}{8}$ bulbs in a 4-inch pot, if they are to be potted.

If you are growing chrysanthemums in pots and wish to get nice bushy plants by fall, take the time to pinch them out several times from now until the end of July. It often pays to use a few pompons in pots, especially if you have some left over after you have finished planting out the main crop. Plant them in 4-inch pots now and shift them later. They sell fairly well in pots and even those not sold can be used for cutting.

THE POT CULTURE OF CHRYSANTHEMUMS.

E. H. Jones, MacDonald College, Que.

Those who have tried know that 'mum growing is a delicate operation. When successfully carried out, it more than repays the outlay of thought, time and trouble. It seems to me that there has been a lack of interest taken in this beautiful flower the last few years, and the sooner we, as florists, awaken a little more interest, and educate the general public, the better it will be for the profession. These flowers come at a time when others are past, and I know of none so beautiful. Within the last 20 years the cultivation of 'mums has made great strides. The size of bloom is due to improved methods of cultivation quite as much as to an improvement in the varieties by selection of sports and cross-breeding.

Stock Plants

Roots selected for this purpose should either be planted in a bench or left in their pots in a cool house. Great care should be exercised when selecting stock, avoiding those which are weak and show long spaces between the leaf joints. The short, stocky growths are best. Cuttings can be taken in January and until April, depending on the kind of plants needed. Those grown as specimens should be rooted early. The longer the growing season, the better will be the chances for obtaining good bushy plants. The main crop should be rooted in March, but a few for late flowering can be rooted in April. The early flowering varieties should be given attention first. Put the cuttings in a sand bed. During the rooting process a high temperature should be avoided, 45 to 50 degrees F. being about right. Shade during sunny weather and also keep them syringed. When the roots are one to two inches long, they should be potted into 2½-inch pots, using soil a little lighter than that for ordinary potting, keeping them in the same temperature and syringing on all favorable occasions. Do not allow them to dry out. Directly the pot is full of roots repot into four-inch, and so on until the flowering pot is reached.

Plants grown as specimens should be potted on into eight-inch or ten-inch pots, and pinched back two or three times. This operation depends on the quantity of bloom needed. The final pinching should be done about the last week in July. Each stem should be supported with a wire or wooden stake. Varieties grown single stem are those that have good stiff

stems. Turner, both yellow and white, Mrs. Drabble, Meudon, Mrs. Stevenson and J. Frasier are excellent for this purpose, as well as many others. These plants are useful for decorating a conservatory, either placed among palms or other foliage plants or in groups, and in developing large flowers this is an ideal system of arrangement.

Cuttings rooted in February and potted on into six-inch or seven-inch pots will, if properly handled, make beautiful specimens. Cuttings can also be rooted during March to supply shorter plants. All lateral growth should be removed, and care taken not to injure the main stem, because if the outer skin is damaged the result is a one-sided flower. To extend the season of the latest flowering varieties, cuttings should be rooted in April, and kept in a growing condition to prevent the wood from getting

hard. Growing points of previously potted cuttings make good material. Give lots of water and close observation. Both are necessary to success.

Some of the single and pompon varieties should be in every collection. They are easily grown and useful for decorative purposes, especially for side benches. To grow good specimens two or three plants can be potted into eight-inch or nine-inch pots, and if pinched back a few times make beautiful specimens. Three or four wire stakes placed around the inside of the pot and tied with raffia give all the support needed.

Varieties.

It would be useless to recommend any good collection, as there are several hundred known species, and it is a matter of taste as to which are the best. The pompon types are early. The Japanese are incurved and

reflexed. Chinese incurved types have florets which curl toward the centre. The anemone types are the singles and are well worth growing. Very few authorities agree as to where these lines of types should be drawn.

Selecting the Bud.

There are two kinds of buds known as the "crown" and "terminal." The crown bud appears directly on the end of the stem, and naturally is the first to appear. In some of the varieties, this is the bud to select, especially in the early kinds as well as in most of those grown as single stem. The crown bud has a longer season to develop, and naturally develops into a larger flower. The terminal bud appears from the axil of the leaves and constitutes the termination of growth. It consists of the end bud. Others will appear at the base of the terminal bud. These should be carefully removed in the Chinese and Japanese varieties. All the buds should be retained on the pompon and anemone types that are grown in bush form. But for general purposes the terminal bud is the one to select. In varieties grown as single stem the second crown bud is generally selected, with the exception of a few, such as Turner, both yellow and white, which does exceedingly well on the terminal. It is far better to try out varieties as some of them show quite a different color and shape when different buds are used.

Soil.

The chrysanthemum is a gross feeder, so at least one-quarter of the soil should consist of rotted barnyard manure, with one pint of bone meal added to every bushel of soil. A good turfy loam with a little sand is a good mixture. It is a good plan to mix enough soil for the whole of the plants and leave it in a heap for a few days before using. Two or three weeks after the final potting a top-dressing of the above mixture is of great benefit.

Feeding

This is an important detail while the plants are growing. The failure of many blooms is due to over-feeding. The root hairs attached to the main roots are tender, hence the caution. The proper time to commence feeding is when the pot is full of roots. Strong growing plants require more food than weaker ones. It would be unwise to recommend any particular fertilizer, as each grower has his particular fancy. It is advisable to frequently change the diet, and liquid manure is one of the best stimulants, as it contains most of the

food required. Beginners should purchase fertilizers of a dealer and carry out the directions given on the packet. The only way to success is practice.

Ventilation.

Good ventilation is essential when cultivating indoors. The best flowers are usually grown in the green house, as with abundant ventilation and frequent syringing, the house is kept in a more favorable condition for their growth.

Insect Pests.

There are several species of aphids which attack the young shoots. The green and black flies are the most troublesome. These are easily controlled by spraying with nicotine or some other insecticide. Red Spider and Thrip are also enemies of this plant. These appear on the underside of the leaves. Frequent syringing on the underside will keep them in check. The Tarnished Bug, commonly called chrysanthemum bug, is one of our worst enemies. The only means of controlling these at the present time is by catching them early in the morning, when they appear to be quite drowsy.

GENERAL NEWS NOTES

The Garden Club of America is to hold its annual meeting with the North Shore Garden Club at Manchester, Mass., from June 28 to July 1. A long program has been prepared, but it is expected that the delegates will

have time to visit the Arnold Arboretum, in Jamaica Plain, and a number of prominent estates, including that of C. R. Crane at Ipswich, W. H. Moore at Pride's Crossing, and the Brandegee, Sargent and Anderson estates in Brookline.

The July meeting of the St. Louis Florists' Club will be held at the establishment of J. F. Ammann, Edwardsville, Ill. The date will be July 8.

The business of Fred W. Eude in Kirkwood, Mo., has been turned over to his two sons, Martin and Paul, who will carry it on in the future. Mr. Eude, Sr., expects to spend much of his time in California where he has a large fruit farm.

The Wholesale Florists' Association of St. Louis, has started closing on Saturday at noon, but decided to keep open for business Sunday morning until noon.

Michael Leider, of Evanston, Ill., has bought the greenhouse establishment of Edward Leuret at Park Ridge. The range consists of four houses given over to carnations.

Ferndale greenhouses at Charlotte, Mich., have been purchased by Joseph Gansbiller from Everett Garman.

The Florists' Club of Rochester, N. Y., is holding a picnic the first week of August at Grand View Beach.

Jones-Russell Co., Knoble Bros., J. M. Gasser Co., Westman & Getz and Bramley & Sons of Cleveland have joined the list of florists to close on Sunday.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have spoken before of the value which the Missouri Botanical Garden Bulletin must be to residents of Missouri and adjoining states. The list of plants which I mentioned in connection with the April number of the Bulletin is largely extended in the May number, which has suggestions for native trees and shrubs with conspicuous flowers. Not only is the list an extensive one, but it is made doubly valuable by a key which indicates the particular kind of soil which each plant prefers. The color of the flowers and the time of blooming is also shown. As a matter of fact, an examination of the plants must show that a large number of them might be planted with equal success in New England and other eastern states.

The same number of the Bulletin contains an article which should be of value to professional gardeners, de-

scribing as it does the grafting of Mangosteen by inarching. The process is also pictured, and is an interesting one.

Another good pamphlet which has just come to hand is the Annual Report of the Brooklyn Botanical Garden. This is a paper covered volume of a hundred pages and reveals the fact that this institution has been very active the past year in promoting the horticultural interests of the city and in other ways. Less is heard about the Brooklyn Botanical Garden than about many other similar institutions. Possibly its press agent is a little less energetic. As a matter of fact, however, the institution is carrying on a remarkable work, especially along practical lines, and is getting very close to the public, bringing them through lectures, meetings, children's

gardens and the like a vast amount of helpful service.

A Book of Gardens, issued by John Scheepers, Inc., of New York City, marks a new epoch in catalogue making. This is one of the most elaborate, costly and beautiful selling mediums ever put out in this country. It is little less than a handbook, and warrants the sub-title which has been given it by Mr. Scheepers, A Treatise on American and Foreign Bulbs for Outdoor and Indoor Culture. The word culture might well be applied to the book itself, for it represents the best thought of several distinguished collaborators like Mrs. Francis King, Mrs. Edward Harding, Mrs. Louise Beebe Wilder and the Rev. Joseph Jacob so that it is filled with literary allusions, bits of poetry and choice quotations which make it a delight to men and women of cultivated minds. The illustrations are superb and include many fine drawings and decorations by Miss Beatrice Stevens. Mr. Scheepers is certainly to be congratulated on his enterprise in getting out this elaborate production and the good

taste which he has shown in its arrangement.

Peony growers, like iris growers, are having a difficult season, especially as regards exhibits. It has been two weeks late, for one thing but worse than that is the fact that hard rains have beaten down the plants and destroyed many of the blooms. It was not an easy matter to stage the show in Horticultural Hall, Boston, last Saturday, considering the fact that rain had fallen steadily for the three days previous. One feels that Mr. Rollins had the right idea several years ago when he invented the protecting screens for peonies. These screens, supported by iron rods so arranged that they could be quickly folded away and as quickly set in place, serve to shelter the delicate blooms from both the sun and heavy showers. Mr. Rollins used the argument, and I am not sure but he was right, that peonies ought really to be grown in tubs and shown as growing plants at the best exhibits instead of having the flowers removed and exhibited as cut blooms. This plan would give a perfection of blooms, and they would make a more artistic display than when thrust into bottles. As a matter of fact, it is a little difficult to get very enthusiastic

over peonies, rhododendrons, dahlias, or any of these large flowers as they are commonly shown. They lose the grace and much of the charm which they carry when on the bushes.

It seems a pity that more use is not made of the Mountain Laurel for the decoration of large estates. It is quite as handsome when used in masses as Rhododendrons or other shrubs which can be grown. Of course there are certain limitations because of the peculiar soil requirements of *Kalmia latifolia*, but in New England and many other parts of the country this native shrub can be employed with great success in landscape work. This fact is demonstrated by the way in which the plants are used at the Arnold Arboretum. Unfortunately they are not blooming very well this season, but a burst of bloom such as came last year is worth while even though it is not an annual event.

NASSAU COUNTY HORTICULTURAL SOCIETY

The regular monthly meeting of the Nassau County Horticultural Society was held in Pembroke Hall, Glen Cove, on Wednesday, June 9. President Thos. Twigg occupied the chair. Felix Wood and Angelo Faminletti were

elected to active membership and two petitions for active membership were received. Messrs Alex MacDonald, Lucking and Smith judged the exhibits and their awards were as follows: 12 mixed Roses; 1st James McCarthy. 3 Head of Lettuce, 1st John Henderson; Wm. Popp's special, best decorated baskets by assistant gardeners; 1st Arnold Gatticar. Joseph Winsock showed a fine vase of Roses for which he received honorable mention. A hearty vote of thanks was given Secretary Harris for the splendid work he did at the recent Tulip Show. The Rose Show will be held at the Nassau Country Club on Wednesday, June 16th. There will be thirty-two classes for competition and from all indications it should be a show worth seeing.

A letter of sympathy was sent to the family of the late Maurice Fuld.

President Twigg presented on behalf of the members a small gift to Joseph Adler our late president.

Exhibits for next meeting: 25 Pink Sweet Peas, 25 White Sweet Peas, 25 any other color. Six varieties of Sweet Peas, fifteen of each.

George Watson's Corner

"You in your small corner and me in mine."

Charles H. Grakelow is not only a leading retail florist of Philadelphia, he is also a wit and an orator. Even when he comes to the market on the solemn business of buying to best advantage he has time to pass the time of day with a dilettante like yours truly. Say George, I see you've been writing sermons on the evils of profanity sez he. We modestly acknowledged the corn and asked wasn't it all right. Sure sez he, I call it a hell of a good story. Which goes to show that even in profanity New York may not be so much worse than the Quaker City. That's bad grammar of course, but at least it isn't profane. And there are times when a strong one is excusable. In front of the post office of a nearby suburb a poor lad dropt a quart of good likker and it busted and ran in the gutter. I could not repeat what the man said, but all the bystanders laughed and guffawed. I called it a tragedy; but Edward Dooner said it was worse than that—it was a cataclysm!

Everybody you meet and talk with can always be interested if you hit on subjects based on the True and Beautiful. No matter what nationality or creed you will find everybody responds to that and will enthuse. Methods of expressing themselves in these twin fundamentals have kept the human race busy since the world began. Religions, nationalities, cults, are all subordinate when it comes to the True and the Beautiful. That is why it is such a safe proposition when you meet a stranger. The stranger may be from Asia, Africa, Europe or America—and he may have all kinds of queer make up inside his birth and breeding but if you start out on your conversation on the lines fundamental you will find a human being responsive. The idea suggested here beats the drummers notion of finding out first what the prospective purchasers ideas are on politics or religion and then flattering them into an order. That's all right but it is a bigger thing to work from the bottom instead of starting at the surface and working down.

The outstanding fact about the meeting in New York on the 15th inst on

Quarantine 37 according to Samuel S. Pennock was that it was general in character and that the commercial element was not over represented which gave added strength to its influence with the authorities at Washington. It was shown that the quarantine was affecting horticulture unfavorably entirely apart from the dollar viewpoint. If the quarantine had been in effect during the past hundred years we would have had none or very few of the rare plants and trees that now grace our parks and private estates and the many wonderful products of nature that now adorn our gardens and greenhouses.

John Westcott had a visit from Herbert Pennock of Jupiter, Fla., on the 16th inst. These two were side partners in Pennock Bros. for about thirty years and it is not hard to imagine what a pleasant afternoon was spent talking over old times. It is a fine custom and we all enjoy it, especially as we grow older and find the years that pass are always taking a few more of them away from us.

John G. Whilldin, of the Whilldin Pottery Co., is on a vacation in the Pocono Mountains.

The greenhouses of August Doemling, of Lansdowne, were struck by lightning on the 16th inst. The chimney of the principal boiler house was destroyed and there were minor damages.

Theodore Meskers, located at McKinley, a suburb near Jenkintown, is the new occupant of the Oscar Young place which has been in litigation for some time. The final adjudication will come before the courts next October. Meanwhile Mr. Meskers is not worrying as he has carried out all his obligations under the contract and is running an active business in a general line of stock such as bedding plants, carnations, sweet peas, chrysanthemums, daffodils and other bulbous stock. He came from Holland and had three years at Dreers. Also conducted a place of his own at Olney before taking up the McKinley proposition. He is well thought of by his compeers in the business and will doubtless do well in his new venture.

Messrs. Dungan, Edwards, Burpee, McKubbin, and Stokes, were among the Philadelphia delegation which left on the 19th inst. for the Seedsmen's Convention in Milwaukee, which opened on the 22nd inst.

HORTICULTURAL CONFERENCE DISCUSSES QUARANTINE 37.

Permanent General Committee Appointed to Frame and Carry Out Constructive Program.

The first fruits of the recent determination of the Massachusetts Horticultural Society to "start something" aiming towards a modification of Quarantine 37 ripened on June 15th when some 75 horticulturists met in the American Museum of Natural History in New York. For the most part these were delegates from horticultural societies, garden clubs and other organizations that had been specifically invited to participate; but there were also a number of representatives of the horticultural trade and others who had simply accepted the invitation extended to "all interested to attend."

To summarize the results of the conference first, disregarding the sequence of events, it may be said that there was evolved from the conference a permanent, general committee of about thirty delegates from different horticultural interests or bodies, which promptly proceeded to elect J. Horace McFarland of Pennsylvania permanent chairman, and W. Rich, secretary of the Massachusetts Horticultural Society, permanent secretary and tem-

IMP SOAP SPRAY
Sure Insect Killer

IMP Soap Spray is a scientifically prepared compound that is destructive to insects without injuring plants or roots. Does not spot leaves, fruit, grass or deface paint work. May be used on fruit trees; shade trees; flowering shrubs; vines; garden truck; and on all sorts of plants, both under glass and out of doors.

It is most effective against rose bug; mill bug; white, black, green and rhododendron fly; red spider; thrips; aphids; fruit pests; elm leaf beetle and moths. Very economical, one gallon is mixed with 25 to 40 gallons of water. Full directions on each can. Order direct if your dealer cannot supply.

 PHILADELPHIA, PA.

porary treasurer. The chairman then appointed an executive committee of five, to serve with himself as ex officio chairman, which was instructed to work out a plan of action, formulate a financial program for the support of the work undertaken, and report back to the general committee from time to time. The members of this central body, upon whom will now devolve the large and immensely important task of proving the undesirability of Quarantine 37 in its present form and of effecting changes therein, are the following:

A. C. Burrage, Massachusetts,
 E. C. Vick, New York,
 J. C. Wister, Pennsylvania,
 Frederick Cranefield, Wisconsin,
 Mrs. Francis King, Michigan, and
 J. Horace McFarland, Pennsylvania
 (ex officio).

With a view to meeting such immediate expenses as might arise, the representatives of the Massachusetts and New York Horticultural Societies contributed \$400 apiece, which generous gifts were accepted by the committee which then moved that the executive committee work out a practical working plan for the further providing of funds, elect a permanent treasurer and call upon the other organizations represented on the general committee and in sympathy with the movement for similar contributions commensurate with their means according to a carefully considered schedule. The membership of the general committee is given at the close of this report.

The conference was called to order by President T. A. Havemyer of the New York Horticultural Society who first appointed Mr. Rich to act as secretary, then had him read the call to the meeting issued by the Massachusetts Horticultural Society, then read the lists of organizations, etc., invited to send delegates, and then after Mr. McFarland had been regularly elected, turned the meeting over to him.

Mr. A. C. Burrage then read a comprehensive, convincing and forceful statement setting forth the sentiments of the Massachusetts Horticultural Society and making informal suggestions as to ways and means for meeting the situation. He also read a letter from Professor C. S. Sargent of the Arnold Arboretum, setting forth his personal convictions regarding Quarantine 37, and explaining that its effect upon his institution, which for forty years has been adding to this country's store of valuable plants and horticultural knowledge without once having been accused of bringing in harmful pests, has been to necessitate the total discontinuance of plant importations until conditions are different.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

LEMON OIL COMPANY

Dept. 3. 470 W. Lexington St., Boston, Md.

Judge Chas. W. Hoitt of New Hampshire discussed the legal aspects of the matter, after which J. C. Wister set forth the consensus of the Pennsylvania Hort. Society in a third strong address.

A striking feature of the entire gathering was the apparent harmony of ideas, principles and—so far as they were discussed—plans in the minds of the delegates. These may be summarized briefly as follows:

It was generally conceded that the horticultural interests of the country, individually and collectively, are one with the Department of Agriculture in its desire to protect this country from invasions of harmful, injurious pests of all kinds. To the extent that plant inspection and even plant quarantine are clearly necessary for this purpose, logical, humane, businesslike, scientific administration of these methods is approved.

BUT—it is objected that—

1. There is no good proof that the blanket Quarantine 37 as now interpreted by the F. H. B. is necessary.

2. That the assumption that injurious pests come into the country in dangerous quantities only on plant products is false and unjust.

3. That the rulings and regulations of the Quarantine are arbitrary and inconsistent.

4. That an equally effective and far more satisfactory protective measure would be the maintenance at ports of entry—say 5—with capable trained experts in charge where importations of plants could be inspected, held in quarantine, treated if necessary or even refused admittance and destroyed.

5. That the Federal Horticultural Board is exceeding its authority and the authority contemplated in the original legislation in acting not only as prosecuting attorney but also as judge and jury in deciding the harmfulness of insect pests and the possibilities of particular plant products as carriers of them.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 2,500 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

HORTICULTURE, 78 Devonshire St., BOSTON, MASS.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN.

Our Promotion Bureau is advised by the manufacturers of the slogan billboard signs that immediate shipment can be made of billboards over any route not affected by the freight embargo, which is still holding up shipments to some points. Florists, whose establishments present opportunities for the display of one of these signs are reminded that not only do they help the campaign, but give splendid publicity to the establishment on which they are displayed. A supplementary sign showing a florist's connection may be affixed underneath or above the big sign, carrying any announcement desired. Every florist should have a sign on his plant; the public are interested, always, to know whose place of business they are viewing, and a billboard will not only fill this requirement, but spread the gospel of "Say it with Flowers." The cost of a board, \$50, is not any more than one would expect to pay for a decent sign, and a similar sign, outside of the arrangement made by our committee would cost to day \$100. Iron, paint and labor are expensive items today, as all of us know, and these signs at \$50 each are bargains really and truly. Another thing, they ornament a place. A sign nicely located gives a touch of color too, sometimes, a rather dreary expanse of glass. It conveys the idea that flowers, not vegetables, are grown under that glass; and that thus grown, they cost money. We have never been able to impress upon the public the fact that production of flowers under glass is costly, and there is nothing in the big stretches of glass houses seen along the highways in all parts of the country to link them with the flowers of the florist. These signs will do just that, and every florist who has a place for one should invest \$50, and see that a sign ornaments his establishment.

We are pleased to note a little response now to our appeals for subscriptions which the publishers of the trade papers courteously allow us to place in their columns every week. True, the subscriptions are small, but we welcome them equally with the large. A florist who sends in \$5 with his best wishes for the campaign is a good fellow—he has his profession at heart, and sends what he feels he can afford to send. It was never intended that a contribution should be a tax.

THE CLEVELAND CONVENTION.

Pres. Miller Writes About the Advantages of Attending

The thirty-sixth annual convention of the Society of American Florists is now only six weeks distant. The central location of Cleveland ought to insure a big attendance from all sections of the country. August 17, 18 and 19th are dates very convenient for the majority of the florists, and climatic conditions in the Cleveland section at this time are usually such as to make a sojourn there very enjoyable.

This convention should prove to be particularly interesting to those engaged in our industry. The re-construction period in business following the war has brought many problems which florists are of necessity obliged to solve, and in this direction material assistance is afforded through the convention, and the wonderful trade exhibition arranged in connection with it.

Make up your mind to be among those who will gather at the convention. It matters little what particular branch of our profession you are most interested in, you will learn something to your advantage, or pick up an idea tending to make your interest greater. You will meet hundreds of your fellow florists, with whom you can exchange views and discuss possibilities. If you have never attended one of our conventions, especially in recent years, you have a treat awaiting you, one combining business and pleasure. It is one of the greatest annual gatherings arranged in the interests of any industry—about 20,000 square feet of floor space is required to comfortably house the convention and trade exhibition. Few cities can provide this amount of space in a single location.

ciety, why not join us at the convention? Better still, send your cheque for \$5.00 to Secretary John Young, 43 West 18th street, New York, right away and become a member in advance. Our membership is reaching up to the 4,000 mark, and is thoroughly representative of our industry in all its branches.

Our trade exhibition alone is worth a journey to Cleveland—or any other city for that matter. This year it is to be the largest in the history of the society. If you are a retail florist, you will see the latest creations and developments in store supplies, vases, baskets, decorative auxiliaries, and business helps. If a grower, you will be interested in the various greenhouse appliances, examples of greenhouse construction, and heating apparatus. The plant exhibits and bulb displays, interesting to both branches of the florist business, will be found most comprehensive, and many little surprises are promised.

You need not come to Cleveland alone. Bring your wife, or others of your family—they will surely enjoy their visit, as much as you will yourself. The hotels in the city can take care of us all, and the local florists promise us a most hearty reception. Very likely your business owes you a little respite from the cares and responsibilities of an active year, and

you will have it in a visit to the convention, returning to your labors better equipped to continue the struggle for something more than mere existence.

In behalf of the society, I invite you to join with us in our effort to make the 1920 convention one of enjoyment and lasting benefit, as well as the biggest and best among the thirty-six on record. It will be a most democratic gathering, without frills or formalities of any kind likely to disturb the pleasures of a visit of which the mingling of good souls is a prime feature.

A. L. MILLER, Pres.

Jamaica, New York.

AMERICAN DAHLIA SOCIETY.

The Dahlia Show this fall will be held in the Roof Garden of the Pennsylvania Hotel, 33rd street and 7th avenue, New York City, and will be one of the largest and best exhibitions New York or any other city has ever seen. So says President Vincent, who is at present hustling to increase the prize list. Anyone with a five or ten spot to spare for the glory of the dahlia will therefore kindly send along their check to White Marsh, Md., and receive blessings. The trade space is limited to two thousand feet—the other eight thousand being reserved for individual exhibits.

THE MARKET.

It has been a buyer's market this week, at least in Boston and New York. The market has been oversupplied much of the time with the result that prices have tended downward. Only white flowers and especially peas have shown a disposition to hold up, they being somewhat in demand for weddings. In Pittsburgh, business has been a little steadier and prices have remained about stationary. There is, however, wide variations as regards all kinds of flowers and in all the markets.

Roses can be had as low as 2c. but the best Beauties have been bringing 20c. Carnations are 1c. and 2c. in Boston, but Pittsburgh reports them selling at 4c. Lilies in Boston are 10c. and 12c. New York is getting a little more, and Pittsburgh seems to be the high market with the price at 20c. Marguerites are plentiful at 1c. each. Gladioli are just coming into the Boston market in anything like a fair supply and sell at 50c. to \$1 per dozen. In the cities further South they are plentiful at 25c. Peonies are about done.

The special feature of the Pittsburgh market has been delphinium selling at 8c. and 10c.

A report from Philadelphia shows that asters are just coming into that market and they are proving very handy to take the place of carnations which are now on the wane. Easter lilies are in particularly good condition and selling well. Liliun candidum is also in the Philadelphia market. Russell, Premier and Columbia are the leaders among the roses, but Beauties are still in pretty good condition.

ROBT. N. CRAIG DROWNED

Robert N. Craig, son of Mr. and Mrs. W. N. Craig, of Brookline, was drowned last week in the Charles River near Caledonian Grove. Mr. Craig is well known as the superintendent of Faulkner Farm, and secretary of the Gardeners' and Florists' Club of Boston. The body of young Craig was found in two feet of water. Nearby was his canoe partly filled with water. It is understood that it has been the custom of several young men among the students at Northeastern College, which the lad attended, to sleep in their canoes on the river. Robert Craig was eighteen years old and a most likable young man, with a great number of friends.

EXPLOSION DAMAGES SEED HOUSE

As the result of an explosion several days ago, considerable damage was done in the seed house of Fottler, Fiske, Rawson Co., 12-14 Faneuil Hall Sq., Boston.

According to reports, employees of the concern were disfecting a room on the third floor with carbon bisulphide when an electric light bulb was broken by the slamming of a door. A spark from the bulb ignited the gas causing the explosion. The room quickly became a furnace and three employees were painfully burned. They were George Cogswell, Samuel V. Walters and Stanley Perry. After the explosion the flames shot through the open windows and a policeman pulled in an alarm. It looked at first as though a second alarm would be necessary, as this part of the city is very congested, but the flames were soon brought under control. It is not possible yet to obtain an estimate of the damage, but it will be considerable.

GENERAL NEWS NOTES

The Florists' Club of Washington, D. C., is planning its annual picnic for July 28. It will be held at Great Falls, Va., and a long program of sports will be carried out.

The Florists' Association of Rochester, N. Y., will hold its annual outing at Grand View Beach on August 5.

The Chicago Commercial Flower Growers' Association has reelected the following officers: President, Joseph Kohout, Libertyville; Vice-president, Rudolph Ellsworth, Downers Grove; Secretary, Otto F. Amling, Maywood; Treasurer, N. K. Wietor, Chicago.

Six new greenhouses are being added to the range of Heepe Wholesale Plant Co., at Macedonia, Ohio.

A. W. Lenke, of St. Paul, Minn., has moved into larger quarters in the recently erected Hamm Building, Sixth St.

The S. S. Pennock Co., of Philadelphia, is now closing at 4 p. m. daily and on Saturdays at 1 o'clock.

Capt. Abram Clifford is in charge of a new establishment which has been opened at Newport, R. I., and is known as the Leikens Flower Store. He has recovered from the wound received while in service in France.

The mid-west Horticultural Exposition is to be held in Council Bluffs, Ia., this year, November 15-20. H. S. Herick, of Ames, is general secretary.

A. L. Glaser & Sons of Dubuque, Ia., have filed articles of incorporation, with a capital stock of \$100,000.

Three new houses have been completed by the E. G. Hill Co. at Richmond, Ind. The longest is 80 x 400 feet.

The Standard Floral Co., of Harrodsburg, Ky., has been incorporated, with a capital stock of \$10,000. The incorporators are Louis L. Singer, E. H. Gaither and G. M. Greenville.

HORTICULTURE

Vol. XXXII

JULY 3, 1920

No. 1

THE TALK OF THE TRADE

Cut fronds of adiantum have been in strong demand for the past few years, and in the East particularly there seems to be a good opening for a grower to handle this crop properly, as he will surely find ready sale and at a fair price. The varieties hydridum and Croweanum seem to be the most satisfactory, and this is really not a hard crop to handle. There is more stock grown around New York and Philadelphia than around Boston, but even Philadelphia and New York could use more, and it is particularly true that a crop of cut fronds coming regularly into Boston would find quick sale. I know of one storeman, for instance, who is now ready to contract

for 2,500 cut fronds every week, and this is only a bit of information I happened to run across and doesn't indicate by any means what further could be done.

Well grown pot plants of adiantum are also good property, not particularly Farleyense, as that is a more fancy pot plant and not in such heavy demand, but cuneatum, hybridum, Croweanum and also that very good pot plant variety Farleyense gloriosum. The latter is a very pretty plant when well grown and gives good results as a store plant.

Growers who started on planting their new roses early are now able to

judge a little bit of the growing qualities of these new introductions, and reports from all directions would indicate that Dunlop is a hustler. While there was a tendency to mildew in the pot plant stage, after it was planted it quickly outgrew this trouble and is jumping ahead with every indication of it being one of the rankest growers of any of the forcing roses. Let us hope that it will give the good results that we have a right to expect from present indications.

The Sunday closing idea is spreading fast, and it is right that it should. Florists all over the country are falling in line, and it is to the credit of the trade that this movement has been adopted so readily. There is no reason in the world why flower stores should

Madam Butterfly

be kept open on Sunday. If there is any necessary work to be done, this can be done behind closed doors, and of course as long as funerals are held on Sunday there will be some work to go with them; but in some communities Sunday funerals have been stopped, and where this is the case there is absolutely no reason for any flower store to be conducting business on that day.

The meeting of the united horticultural interests held in Boston to consider Quarantine No. 37 to my mind was the most deided step with promise of good results that has been made since this vexed question has come up. Just so long as we have commercial interests who are in favor of the embargo on account of their own particular business will we have a weak fight if it is left entirely to the commercial interests; but the point has come now where the powers responsible for Quarantine No. 37 are being shown that this is not popular and is considered detrimental to horticultural interests for many reasons.

It has come to the point where this is not a business proposition but is for the good of every branch of gardening that is represented in America that this fight must be carried on. It would appear that the best results will accrue from a fight to modify the ruling. We can't expect to kick it out entirely but it must be modified, and I believe if we go along in that way, the time is not far distant when everyone connected with the trade will be much better pleased with the rulings of this quarantine.

The meeting held in New York brought together some strong men, and I believe we are to find far reaching results. The weight of Mr. Havemeyer, Judge Holtt, A. C. Burrage, John C. Wister, Wm. C. Endicott, Professor Sargent and men of that type will certainly be felt.

I have a letter from Max Schling in which he discusses certain circumstances which probably are familiar experiences to many other florists having a wide reputation and a high class trade. Mr. Schling writes that he is making the facts public because he believes something should be done to prevent imposition of the kind described. He also suggests that it would be well for any florist engaging any employee for a responsible position to investigate the statements made by the applicants to see if they are based on facts. Mr. Schling's letter follows:

"Not very long ago one of our errand boys applied for a position in a flower establishment living in the

reference and stating that he was a salesman and designer. This establishment was a flower shop attached to one of the large hotels. Fortunately for him the manager did not inquire, but on account of being short-handed he put the man on taking care of plants, etc., and helping with filling vases for tables and other work.

"I do not know exactly how he got along, but in the course of time he did learn something of the business, possibly not enough, because he had to leave, and it was just in the beginning of the fall season that he secured another position in a New York flower shop of excellent reputation. There he made such an impression on the proprietor that he did not inquire about him, but just wanted to secure a good man for the coming rush, but this man, the next day, stated that he could start in immediately in our place at a much higher salary, trying to increase the offer in the place where he had been engaged. The florist called me up and asked me point blank 'did you offer so and so a position?' I told him no and told him also the reason why I wouldn't employ the man.

"Several times we received inquiries from florists regarding a man who claimed to work for us and whose name and pedigree we did not know anything about. That proves that there are men who are utilizing the name of our firm to get in connection with other firms and it should be stopped."

The very heavy call for young rose plants indicates as was to be expected a lot of replanting this season, and it is interesting to everyone handling roses to note the varieties which are in demand. I don't know whether to place Premier or Columbia at the head of the list, but both of these sorts are being planted in large quantities, and besides these there are three others which figure heavily,—Ophelia, Double White Killarney and Madam Butterfly. Of course, this is not taking into consideration the new sorts, but all of the old standbys are fast being pushed into the discard.

Mr. Roman Irwin, who has been spending several days visiting growers in the vicinity of Boston, is enthusiastic over his new quarters in New York City. He says that when the work now being done on them is completed they will be practically just what he has been waiting for since he went into business. It is expected that they will be among the finest offices of anybody in the trade anywhere in the country. Mr. Irwin plays just as hard as he works, as anybody could see who attended the florists'

New Violet "Duchess"

This is a great improvement on Princess of Wales. Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00
PRINCESS OF WALES ..	10.00	95.00

MICHELL'S SEED HOUSE

518 Market Street Philadelphia, Pa.

outing at Suntaug Lake, last Saturday, and doubtless that is one reason for his business success, for it is true as ever that "all work and no play makes Jack a dull boy."

BOSTON FLORISTS' OUTING.

A Largely Attended and Very Successful Event.

It was an ideal day which the Boston Florists' Association had for their picnic last Saturday, and Wardhurst, Hap Ward's well known establishment at Lynnfield, was invaded by a party of nearly 150, including many guests. Instead of having the dinner at noon, as usual, it was postponed until 5.30 in order that those who participated in the sports might be in better condition for running, jumping and ball playing. The first event was a ball game between the retailers and the wholesalers, the former winning by a score of 6 to 5. Roman Irwin, of New York, and Jake M. Cohen of Boston were the umpires, and their decisions were so impartial that nobody registered a single kick. In the course of the game, Arthur Carr was so unfortunate as to be hit in the side of the head with a pitched ball while at the bat. His ear was cut, but he insisted on staying in the game and went to first base. One feature of the game was the base running of Henry Penn. Prizes of safety razors were given to each member of the winning team, this ceremony taking place at the dinner later, on which occasion Mr. Hoffman said that he believed Umpire Irwin should be rewarded too, and accordingly turned over his razor to him.

After the ball game came the married ladies' race, which was won by Mrs. Sidney Hoffman, the prize being a handsome bag. Mrs. Stanley Rogers came in second and received a fountain pen. The winners in the single ladies' race were Miss Thommen and Miss Letson. The fat man's race was an interesting event, but Edward Welch showed surprising speed and won the first prize, Mr. William Nicholzen was his closest competitor. A spirited 100-yard dash was won by

Stanley Rogers, who was awarded a handsome umbrella and walking stick, donated by the Climax Box Co. Albert Neddy was second.

The dinner was an elaborate one, and cooked to the queen's taste. There was a short pause in the festivities when Mr. Penn announced that the mother of E. S. Gorney, secretary of the association, had just passed away. All those present stood for a few moments out of respect to her memory.

In the course of the evening a few remarks were made by Henry Penn, president of the organization, and Sidney Hoffman, chairman of the committee on arrangements, to whose energetic efforts the success of the outing was largely due. Mr. Hoffman had the able assistance of William R. Nicholzen in the preparations. Evidently the association is now in a flourishing condition, for Mr. Frank Edgar, the financial secretary, was seen gathering in the shekels at high speed. William Stickel is the treasurer, and Elijah F. Gorney, secretary of the association, completing a list of active and efficient officers.

BOSTON.

Mr. John Farquhar is to leave late in July for France, and will spend sometime there and in other European countries, returning in September.

Mr. Arthur Carr, a well known salesman in the market, has recently returned from a fishing trip in Maine. It is evident from Mr. Carr's countenance that he spent much time in the open air. He reports that the fish are biting well in the Pinetree State.

Mr. E. H. Wilson, of the Arnold Arboretum, has finished packing his goods in preparation for his next long trip, which will take him around the world. He leaves the middle of next week, and will be gone about two years.

The florist shop of J. F. Shea which was formerly located on Center street, Jamaica Plain, has been moved

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Change seems to be the law of life, at least in Moving a big city like Boston. The editorial staff of again HORTICULTURE had only become well accustomed to its quarters at 78 Devonshire Street when it began to hear rumors of a plan to demolish the building to make room for a larger structure. When the owners declined to renew our lease we knew that another shift was impending, accordingly we were prepared for the worst when the announcement came that the building is to be razed immediately to make place for an addition to the National Shawmut Bank.

Fortunately, however, we have been able to secure equally commodious and even more pleasant quarters, although they are somewhat further from the center of the town. After this week the editorial and business offices of HORTICULTURE will be located at 739 Boylston Street, where we will have every facility for our work. With a three years' lease this time we feel reasonably certain that we shall not be disturbed again in a hurry.

In spite of the high building costs in Boston, a great amount of work is being done, especially in the way of tearing down existing buildings to make room for larger and more modern office structures. Naturally these changes hit the florists and other members of the horticultural trades. Under present conditions nobody is sure as to his rent or his location unless he owns his building or has a long term of lease. However, as we have said before, change is the law of life and usually it means progress.

We are sure that all members of the trade Expression of sympathy who are acquainted with Mr. William N. Craig, Secretary of the Gardeners and Florists' Club of Boston, and Superintendent of Faulkner Farm, will give him and his wife their heartfelt sympathy in the loss of their son, which is chronicled on another page. The young man gave great

promise and was the pride of his parents' heart. It is not strange that Mr. Craig has received letters of condolence from all over the country. His friends, and they are legion among gardeners and florists, feel the keenest regret at his loss.

At the meeting of the American Seed Trade Association in Milwaukee last week Mr. J. Too many names Horace McFarland read an unusually interesting and important paper on the duplication of plant names, although it bore a different title. Horticulture Nomenclature was what Mr. McFarland called his paper, but the subject matter had to do with the general mixed-up condition which exists as regards names of vegetables, flowers and fruits. It is a well-known fact that there are vegetables which masquerade under half a dozen different names, although they are identically the same. On the other hand, there are different ornamental plants which bear exactly the same names. A prominent seedsman has said that there probably are 10,000 names for only a thousand distinct vegetable varieties. Mr. McFarland is chairman of the joint committee on Horticultural nomenclature which is acting for practically all of the organizations representing horticultural interests, with the exception of the American Seed Trade Association.

It is very probable that this association will be moved to cooperate now, for Mr. McFarland cleverly and clearly set forth the need of this work. Certainly it would be to the best interests of the trade to have much clearer understandings as to the right names to use and the public would be benefited and no doubt pleased if all catalogue makers would unite in using exactly the same names for the same flowers and vegetables. This would be easy enough as regards some things like the different daistes, the buddleias, primroses and other flowers, but we must admit that greater difficulties will be encountered when it comes to dealing with the same vegetables put out by different seedsmen under names of their own for the purpose of obtaining additional prestige.

In the course of his talk Mr. McFarland gave one excellent illustration of the difficulties brought about in human affairs by identical names. He said that when he was in government work at Washington last year an unmarried man who enlisted in Rochester, N. Y., and went through the war, was met on his return by two alleged wives, neither of whom he had ever seen, and one of them being a black woman from Macon, Ga. Both women claimed and could prove that they had received the man's service allotment, although he had assigned it to neither. There was simply a duplication of names and of wives, as well as of colors, but the confusion was no worse, Mr. McFarland claimed, than exists among the peas and beans, tomatoes and turnips offered in a seed catalogue.

Whatever the results may be as far as the seedsmen are concerned, and a reform along this line is certain to come, the fruit growers have already done much to straighten out the nomenclature of the varieties which they handle, and nurserymen are progressing rapidly along the same line. Mr. McFarland's committee was doing good work, everybody knew, but perhaps it was not generally realized that so much had been accomplished or that the need was as great as it is until the gentleman from Harrisburg had presented the facts in his able paper.

FLOWER SHOW IN BOSTON

What Was Announced as a Rose Exhibit Developed into a Peony Display

According to schedule the Show at Horticultural Hall, Boston, last Saturday and Sunday should have been a combination rose and strawberry show. As a matter of fact, it was a very much better peony show than the one which was held at the regular peony exhibit the previous week. Peonies were in good condition last week, and as a result the hall was filled with these flowers, many of them of high quality. Only a few roses and fewer strawberries were exhibited, owing again to the lateness of the season. Some especially handsome Japanese singles were shown by D. W. McKissock, of Needham. H. F. Chase, of Andover, who has acquired an enviable reputation as a peony breeder in a limited way, had a very good collection, one of his seedlings, Miriam, a rich rose pink, attracting especial attention. He also showed a stalk of Lady Alexander Duff with six fine blooms. T. C. Thurlow's Sons, of West Newbury, made a notable entry with 10,000 blooms.

A special display of evergreens from the Blue Hill Nurseries was also a feature of the show which attracted much comment. A number of remarkably fine small specimens were shown of Japanese larches and arborvitae.

A list of awards follows:

Awards for Flowers

Theodore Lyman Fund, No. 2. Herbaceous Peonies. Collection of twelve named varieties, Japanese single. 1st, Arthur H. Fewkes; 2nd, D. W. McKissock. Collection of six named double varieties, White, one flower of each: 1st, T. C. Thurlow's Sons, Inc.; 2nd, Arthur H. Fewkes. Collection of six named double varieties, Rose Pink, one flower of each: 1st, T. C. Thurlow's Sons, Inc.; 2nd, Arthur H. Fewkes. Collection of six named double varieties, Salmon Pink, one flower of each: 1st, T. C. Thurlow's Sons, Inc.; 2nd, Arthur H. Fewkes. Collection of six named double varieties, Red or Crimson, one flower of each: 1st, T. C. Thurlow's Sons, Inc.; 2nd, Arthur H. Fewkes.

John C. Chaffin Fund. Roses. Twelve named varieties of Hybrid Perpetual roses, one bloom of each: 1st, Miss Cornelia Warren.

John A. Lowell Fund. Collection of twelve named varieties of Hybrid Tea roses, one bloom of each: 1st, David Tyndall. Six blooms, any Pink Hybrid Tea Rose: 1st, David Tyndall.

Samuel Appleton Fund. Sweet Williams. Display, eighteen vases, not less than six varieties: 1st, Faulkner Farm. Hardy Herbaceous Flowers. Twenty-five vases, distinct species and varieties, not less than ten genera for private growers only: 1st, Faulkner Farm. Best display of hardy herbaceous flowers: 1st, Blue Hill Nurseries. Silver Medal.

Gratuities: Miss Cornelia Warren, display of Roses; H. F. Chase, display of Peonies; Arthur H. Fewkes, display of Peonies; Blue Hill Nurseries, collection of hardy flowering shrubs.

Flowers Under Glass

It is a good plan to make a sowing of Cineraria seeds at this time. You can make another in August and a third about the middle of September, in order to have plants from February on to Easter. Seeds germinate readily now, and the young plants are not difficult to handle during the warm weather. Be sure to use fresh seeds, however, and get the best strain you can of Cineraria hybrida. I think you will get the best results from using a soil made of leaf mold well mixed with sharp, clean sand. Put the trays in a cold frame and keep them moist and shaded, but have the sash raised a few inches from the beginning unless the weather turns cold and damp. When the seedlings are up you can put off the sash on rainless nights. After the seedlings have developed their third leaf begin transplanting.

It is necessary to keep working the carnations regularly in order to have them in good shape for next winter flowering. It is not a difficult matter to handle them if you are fortunate enough to have sandy soil, but when the soil is heavy and full of clay, difficulties are greater, for such soil must be kept stirred continually if the plants are to do their best. You may have to do a little hand weeding close around the plants. It is best to do this while the weeds are small, because after they get large you are likely to loosen the carnations when pulling out the roots. Make a particular point of cultivating after every rain, because a few hours of sunshine will cause a hard crust to be formed. Every few days go over the field and pinch back wherever necessary in order to get short stocky plants.

During cloudy spells such as have come frequently this season, be careful not to overwater the roses, although this is not a very great danger if the soil is open and the drainage is sufficient. On cloudy days when the plants have been watered, it is a good plan to go through the house the last thing at night and blow plenty of air slacked lime around as this helps to dry out the air and to prevent the formation of spot. When you have spotted stock, blow the lime into the air above the walks rather than under the benches, for otherwise

the plants may look as if they were whitewashed. Be careful to keep the rain out in case of a shower, and have your night man put the vents down in the houses of young stock first. If you can anticipate the coming of the storm and close up the house gradually, so much the better. With only mild rains, you can lower the vents so that they shed water but are not wholly closed.

Keep your violets growing without a check. This will mean removing every runner and keeping the plants free from disease or yellow leaves. Especially watch out for green flies. In fact, it is most desirable to anticipate their coming and fumigate in advance. A weak nicotine solution used regularly will help to keep them away. Look over the benches at least twice a week, if you can find time to keep the weeds from getting a start and keep the surface of the benches loose by continued cultivation. Few plants take more careful attention than do the violets. Keep the plants well watered and syringed during bright weather, but if the weather is dull keep the house as dry as possible.

In spite of the fact that it seems sometimes neglected, florists cannot well get along without Adiantum, and many florists can afford to give it more attention than usual. You need to have a house in which you can maintain a temperature of not less than 60 degrees during zero weather. With such a house you can well afford to devote some attention to this fern. You can use the stock out of 2½-inch pots, but will do better to get larger plants if possible. Remember that like most ferns the Adiantum flourishes in a mellow loam, but you should have a fair amount of well rotted cow manure and a little sharp sand in addition. Have the drainage good.

ARBORETUM NOTES.

Tree Lilacs.

The Lilac season closes with the flowering of these eastern Asiatic species which are popularly known as "Tree Lilacs." They all have handsome dark green leaves which fall in the autumn without change of color, and large usually unsymmetrical clusters of white flowers with the disagreeable odor of the flowers of the Privet. They are handsome and hardy plants and when in bloom the most conspicuous of the trees or large arborescent shrubs of their season. This year, the three species promise an unusually abundant bloom. The first of these plants to flower, *Syringa amurensis*, is a native of eastern Siberia, and a shrub twelve or fifteen feet high, with dark-colored bark, leaves pale on the lower surface, and short unsymmetrical flower-clusters which usually are produced only on alternate years. *Syringa pekinensis* blooms soon after *S. amurensis*. It is a native of northern China and a shrub sometimes thirty feet tall and broad, with stout spreading stems covered with yellow-brown bark separating into thin plate-like scales like that of some Birch trees, narrow, long-pointed leaves, and short, unsymmetrical flower-clusters, usually in pairs. This species retains its leaves later in the autumn than the other "Tree Lilacs," and it flowers profusely every year. The last of these plants to flower, *Syringa japonica*, is a native of northern Japan and a tree sometimes forty feet high, with a tall straight trunk covered with lustrous brown bark like that of a Cherry tree, a round-topped head of erect branches, broad thick leaves and mostly symmetrical flower-clusters often eighteen inches in length. This tree rarely flowers except in alternate years.

Berberis Vernae.

Gardeners often complain that there are now too many Barberries, and it is certainly true that only an expert who has devoted years of special study to the genus can readily distinguish all the species, varieties and hybrids in the groups of which *Berberis vulgaris*, the common Barberry of western Europe, and now naturalized in the north-eastern United States, is a typical plant. There are now probably at least one hundred different Barberries in the Arboretum Collection and the number is likely to increase rather than to decrease, for Barberries hybridize easily in collections like the one in the Arboretum, and it is more than probable that China, the headquarters of the genus, may still contain undescribed species. There may be too many Barberries but no one

who has once seen *Berberis Vernae* as it is now growing in the Arboretum will regret that Wilson, who discovered this plant in China, sent seeds to the Arboretum in 1910 from the neighborhood of Sungtan in the upper Min Valley where he found it at an altitude of about nine thousand feet above sea level, growing with the other Chinese Barberries. *B. Vernae* is here now about six feet tall and nearly as much in diameter. The long, slender, bright red branches covered with small, nearly entire leaves arch and droop gracefully, and from them hang on long stems innumerable slender clusters of small, pale yellow, slightly fragrant flowers which in the autumn are followed by small red fruits. A green fountain best describes this shrub. There are Barberries with larger and handsomer leaves, larger flowers and more brilliant fruit, but there is not one in this collection, at

least, of such graceful habit; and *Berberis Vernae* as it grows here is not only one of the most beautiful of the deciduous-leaved species of the genus but one of the handsomest of the shrubs discovered in China during the present century which can be successfully grown in this climate. Plants of *Berberis Vernae* raised from seed collected by William Purdom in Min-chow in western Kansu, received at the Arboretum in 1912, are also well established here.

Neillia sinensis, uninjured by the severe winter, has been as beautiful as usual this year. The flowers are cylindric, clear pale pink, nearly half an inch long and are pendent on slender stems in long one-sided racemes terminal on short lateral branchlets, and do not open until the dark green leaves have grown to nearly their full size. This is one of the Chinese shrubs which seems destined to become popu-

lar in northern gardens. Several other species of *Neillia* are growing in the Arboretum; they are either not hardy enough to flower or their flowers are insignificant.

Aesculus discolor var. *mollis*. This shrub or small tree has not before flowered so freely in the Arboretum. The type of the species has red and yellow flowers, but in the var. *mollis*, which is the only form in the Arboretum, the whole flower is bright scarlet. It is a common plant from northern Georgia to central Alabama and westward to the valley of the Guadalupe River in Texas, ranging west of the Mississippi River northward to southwestern Missouri, and appearing in southwestern Tennessee. In early spring no other plant in the southern states is more brilliantly conspicuous, and its unexpected hardiness in New England is one of the important discoveries made by the Arboretum in recent years. There is a form of *Aesculus discolor* (var. *flavescens*) with yellow flowers which is confined to the Edwards Plateau in western Texas. It is possible that this plant may also prove hardy here. *Aesculus Harbisonii*, which is believed to be a hybrid of *A. discolor* var. *mollis* and *A. georgiana*, is the last of the Buckeyes, with the exception of *A. parviflora*, to bloom in the Arboretum. It is a shrub with broad clusters of large flowers with a rose-colored calyx and canary yellow petals tinged with rose toward the margin. Still extremely rare, this hybrid which is perfectly hardy deserves to be better known.

CONNECTICUT HORTICULTURAL SOCIETY.

The Connecticut Horticultural Society will hold its Annual Fall Flower and Vegetable Exhibition at Hartford on September 22 and 23 next.

LADIES' SOCIETY OF AMERICAN FLORISTS

If, as members of the Society of American Florists predict, the coming convention of this society is to be a record breaker, both in interest and attendance, may I appeal to the members of the L. S. A. F. urging every woman to interest herself in the forth-coming convention and consider herself a committee of one to make plans for the success of our part of the convention. It would be a great encouragement to all of the officers who are trying to make the society a real working force in Horticulture affairs, if the attendance of the members could be record-breaking.

Never before have so many women been interested in the florist profession and never was there a need of a stronger affiliation, whether the interest is from a personally conducted business or merely as the wife, sister or mother of florist, grower or seedsmen.

The social element of every great business must be considered and it is the duty and the pleasure of the ladies to look after this, not only to make the convention better for the ladies, but better for the men. We plan this year to revive the special feature for the ladies evening entertainment. To make this a success we need more than plans, more than funds; we need your attendance and your interest. I have been an attending member at

these conventions for several years and it has been the greatest pleasure to meet the members from all over the United States. As president of the society it is my greatest desire to bring the ladies into a closer association this summer. It is to our mutual advantage and pleasure that we know each other better and these conventions offer the only opportunity. We need a closer co-operation and the association that these few days afford is of far-reaching benefit. We need your presence. I feel fully justified in making a very earnest appeal, urging every woman who can, to attend the convention and if not already a member of the Ladies Society, we shall very surely enroll you, for once an attendant at a successful convention, means always a member.

Very sincerely,

MRS. B. HAMMOND TRACY.

E. J. Roegean and Geo. H. Noyes of the Boston market are leaving on the 10th for a two week's trip through Maine by automobile and may go to Montreal and Quebec before they return.

A new flower bed in the Public Garden is to contain the insignia of the American Legion worked out in an attractive manner. It will contain a gold star representing Boston's war heroes who died in the service, a silver star for the wounded and gassed, and a bronze star to represent all the others.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

It was my privilege to spend an hour or two at the height of the peony season this year at the home of Mr. E. J. Shaylor, whose hybrids have made him famous from coast to coast. Mr. Shaylor's home in Auburndale is a delightful place, located as it is on the top of a high hill, with miles of view stretched out like a curtain before the broad veranda. Thoreau's much quoted remark about the public wearing a beaten path to the door of the man who did something a little better than anyone else might well apply to Mr. Shaylor, for a steady procession of men and women, many of whom are famous in the horticultural world, climb the hill leading to his home, as long as the peony season lasts. The day before I was there, for example, one of the visitors had been Mr. W. H. Havemeyer, who, I understand, left an order which called for only a few plants and a large check. As a matter of fact, it is not unusual for Mr. Shaylor to sell peony roots for a hundred dollars. That is the highest price he has yet obtained, but he is nursing along a seedling for which he expects to get two hundred dollars. I think that he is justified in this expectation, too, for the flower is one of the loveliest ever seen in the peony world, having with its cream white petals and its heart of gold about every quality which a peony should possess.

It is not a big garden which Mr. Shaylor carries on, and the orders oftentimes come in faster than he can fill them, especially for the newer and rarer varieties. He told me that he had sent back a large amount of money because he could not supply the plants. Not infrequently, he said, people from various parts of the country would send him a check for amounts running as high as five hundred dollars, simply specifying that he send them an assortment of peonies such as he might choose.

It is a delight to talk with Mr. Shaylor, especially when walking through the rows of blooming plants, because of the rare enthusiasm of the man and his obvious affection for the creatures of his handiwork, and the

bubbling good humor which came ever to the surface. He is no longer a young man, and has given twenty years of his life to this work, making a success such as that which comes to few men.

Mr. Shaylor said that he, like many The plant is a robust one, and the flowers are borne profusely. Wilton other peony growers, was working industriously to obtain a pure yellow peony, and expected that in the process of time it would be evolved. He already has peonies with very yellow centers, from which he has bred out the pink petals so that they are now white. It is called Luella Shaylor. This is one step in the right direction. If I am not mistaken there is a standing offer of a hundred dollars to the man who first devolves a yellow peony, the flower to be named for the late Mr. Harrison, of York, Nebr.

Mr. Shaylor's garden is full of seedlings, some of which have been named, while others are known as yet only by number. Luella Shaylor, which I have already mentioned is a remarkable bloom, one of the finest which Mr. Shaylor has originated. Another perhaps equally good but quite different in form is Mrs. Shaylor Force. This is a big, round blossom, very full, and immensely attractive. Still another peony with which I was much enamored was a great pink, fluffy seedling called Rose Shaylor. In color this is one of the daintiest and prettiest blossoms in the gar-

E. J. SHAYLOR

den. Mr. Shaylor had William F. Turner blooming splendidly in spite of the rains which had beaten down many of the plants. The velvet like petals of this dark red variety are wonderfully fine. With one exception, this is undoubtedly the nearest black of any peony yet originated anywhere. Lockwood is also a splendid bloomer, one of the best in the garden. Unfortunately, Mr. Shaylor had no specimen of Georgiana Shaylor, having sold all of his stock. Wonderful reports come from the success of this peony, however. It has taken prizes in various parts of the country, and the most enthusiastic reports of its high quality keep coming in. It is one of the best things which Mr. Shaylor has yet put out, but judging from the character of the flowers in his garden, he has yet many surprises for the peony world.

GOOD SWEET PEAS.

By Geo. W. Kerr

La France is a sweet pea gem, in my opinion the best deep cream pink. The wings are rather deeper colored than the standard, running to rich rose-pink. This is extra fine.

Joan of Arc. Deep shell-pink, practically a self color throughout. This is indeed first-class and is quite distinct.

Mrs. J. T. Wakefield might be briefly described as an improved Mrs. J. Balmer. The ground color being rich cream, the entire flower edged rose. As the flower ages it becomes suffused with rose throughout.

Hawmark Pink is in my opinion the finest novelty introduced for some years. It is perfectly distinct to all other pinks. The great feature, or, the predominating beauty of the flower is in the rich coloring of the wings which are decidedly deeper in color than the standard though at the same time the variety might be described as a pink self. The color is very difficult to describe, but it might be said to be a deep shell-pink with a slight suspicion of orange which adds an unusual brightness to the flower. The standard is decidedly lighter in color than the wings. This is the Pink seedling for which I was awarded a certificate at the New York Show last June.

Daisy Bud is a first-class blush-pink with flowers of great size, and a decided preponderance of double or duplex flowers. A strong grower, it bloomed most freely with me last June during adverse weather conditions and when other varieties had given up the ghost.

The above are all standard or summer-flowering Spencers, and in addi-

tion to these quite a family of early flowering Spencers have now been introduced. To those who grow primarily for garden decoration and cutting, this new class is of inestimable value due to their precocious habit of blooming. By their aid the Sweet Pea season may be considerably lengthened as they begin to flower at least three weeks ahead of the standard varieties when sown in the open.

With the view of getting some idea of how these early flowering Spencers would behave grown in the open in the British Isles, early last winter I sent a collection of my best seedlings to a friend in the South of Scotland. In a letter received from him the other day, I was surprised and delighted to learn that they were, by experts there, considered superior to the summer-flowering Spencers. The explanation given was that the flowers were larger, while the blooming season was considerably extended. The varieties which received his highest commendation were: Mauve Beauty, Primrose Beauty, Improved Snowstorm, Exquisite, Enchantress, Lavender King, Pink Beauty, Dazzler, Empress and Canary Bird.

No doubt the cool moist climate must have suited them to perfection, for, although the flowers of these early sorts are immense in size when cultivated under glass, yet in this rather hot locality they do not as a rule measure up to the summer-flowering sorts when grown in the open or at least after the weather becomes at all hot. I shall be interested to learn how they do in our cooler northern states and Canada.—*American Sweet Pea Bulletin*.

George Watson's Corner

"You in your small corner and me
in mine."

E. H. Flood writes from Brussels under date of June 11, reporting all well and having a good time. No report on the Belgian glass business. He promises that a little later. It will be interesting to hear what he has to say on that subject. He will also visit the glass producing centers in Northern France, and expects to put in a week or two in gay Paree.

And speaking of glass reminds us that the glass men of this country are to have a big time at Atlantic City soon. The National Association of Window Glass Manufacturers will hold their annual convention there July 7, 8 and 9. J. R. Johnston of Pittsburgh, reports the arrangements all complete and a busy and enjoyable program all complete for the hundreds of members and their ladies from all parts of the country. The association headquarters will be at the Hotel Traymore.

John Westcott left on the June 25, for a visit with his old friend "Jeff" at Atlantic City. We refuse to give "Jeff" his Sunday name, initials and titles in this report. We have not forgotten the "sawdust pudding" he foisted on your humble servant at Barnegat some years ago.

GET YOUR MESSAGE ACROSS.

Would you cease paying your insurance premiums? If you did what would happen? What prompted the taking of the policy?

The desire to have something for the family when the great day comes. Well, with the same thought in mind how often have you started to advertise, and then seeing no immediate results, quit? The only profitable advertising is the kind that once started should be kept up, and eventually it will help even better than you thought, provided of course, everything is consistent with your advertising.

It not only sells your product but buys good-will so that your ambitions are being constantly put on a higher plane of action. It not only creates a demand for your product but gives you the preference all being equal.

Try to get your message across in as simple a way as possible. Don't try to do impossibilities. Don't try to make an advertisement appear to exaggerate, but rather, do more than is expected of your ad. and the benefits of advertising will be felt a great deal better,

FLORISTS OF CLEVELAND

Men and Women Who Will be Hosts of the S. A. F.

Naturally the attention of florists all over the country is now focused on Cleveland where the next convention is to be held. As it happens, many of the Cleveland florists are already well known to the trade in general, and there is no doubt but what they will make excellent hosts. Mr. H. P. Merrick, writing in the June number of the Journal of the Society of American Florists, discusses somewhat at length a number of the less known florists of Cleveland and vicinity. The following are interesting excerpts from his article:

"Uniquely situated in the apex of a flat-iron building is the retail store of the Jones-Russell Co. Almost surrounded by glass, this store has the novel effect of a huge showcase enclosing a bower of beauty. Owing to the expiration of their lease in the near future, the company have been compelled to seek a new home, and an admirable location has been found in the magnificent new Hanna building now nearing completion. It is their desire and purpose to so arrange the equipment of this store that it will take its place, without question, as one of the beautiful flower establishments in America.

"As recent as fourteen years ago, Herman P. Knoble was engaged in the hardware business, but realizing the possibility of applying modern efficiency methods to the retail flower business, which held for him a strong attraction, Mr. Knoble, launched the firm of Knoble Bros., with a force of four employees, which has since increased to an organization of thirty. Approaching the business with unusual breadth of vision, Mr. Knoble, now a director of the S. A. F., enjoys a national reputation as one of the leaders in the business, and is recognized as an authority upon publicity and selling methods.

"The 'Woolworth of the floral business' is the sobriquet not misapplied to Al. Barber, for he has achieved renown by applying the chain system to his flower stores, of which he now operates six, three in Cleveland, and one each in Akron, Youngstown and Warren. With the recently acquired Calhoun property on Euclid

avenue. The sign, 'Park Flower Shop' upon a store indicates that it is one of the links in Mr. Barber's chain.

"From a never-failing fount of friendliness, Asher M. Coe radiates good-will, and the perennial sunshine of his countenances beams forth wherever there is held a gathering of national importance to the florists. Measured solely by extent of glass, Mr. Coe's range of greenhouses, in the rural suburb, North Olmstead, is less impressive than many of our modern 'flower factories,' but the quantity and quality of the stock produced is a marvel to all who behold.

"No, 'Captain' John Kirchner does not sail the seas, for the prefixed title relates to the fleet of White trucks which he commands. One of Cleveland's most up-to-date florists, Mr. Kirchner conducts growing houses on Greene road, and a splendidly appointed store on Quincy avenue. Not the least lucrative department of Mr. Kirchner's business is the renting of palms for decorative purposes.

"Last, but very far from being least, Cleveland boasts a galaxy of stars—or shall we say a garland of American Beauties—in a goodly list of women florists. The equality of the sexes is well exemplified by the acme of success which many of these ladies have attained. Familiar names among the feminine members of the florists' cult are Miss Hester Getz, Mrs. Mercer, Mrs. Schott, Miss Dunn, the 'Misses O'Connor, Miss Christine and Mrs. Vopat.

"At Mentor are the Merkle Brothers, who, like most of our commercial growers, embarked upon their enterprise many years ago, with a very modest beginning. Their greenhouses

range today is one of the largest in the vicinity of Cleveland, and while formerly it was devoted to the growing of potted plants and ferns, a large extension was built several years ago to provide facilities for the growing of cut flowers.

"Prominent also is the name of Carl Hagenberger, and his plant established at Mentor is famed as the home of the Cleveland Cherry.

"Several years ago the Cleveland Cut Flower Co., composed of Frank Williams and the genial Bate brothers, George, Herbert and Guy, dismantled their large greenhouse range at East Cleveland and rebuilt it in a modern manner upon property which had been acquired at Newton Falls for this purpose, and upon which they had already erected three rose houses, each 50 feet wide by 400 feet long. Newton Falls, a small and somnolent town, was selected because of its superior climatic conditions and the absence of manufacturing industries and their attendant smoke and congestion.

"Just a few doors from the store of the Cleveland Cut Flower Co., is the wholesale store of the Cleveland Plant & Flower Company, conducted by Walter C. Priest and S. H. Berthold. Mr. Priest is also vice-president of the Brookline Floral Co., operating a large range of glass on Pearl Road. A number of these greenhouses were rebuilt last year after having been demolished by a cyclone.

"Among the several wholesale branches recently established in various cities by the McCallum Co., is that of the Cleveland-McCallum Co., under the management of James Mac-

DREER'S "Riverton Special" Plant Tubs

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$4.50	\$49.50	\$375.00

Laughlin, whose thorough knowledge of trade conditions, combined with a rare literary gift, has earned for him the reputation of being one of the most versatile writers upon subjects of interest to florists.

"About seven years ago the Friedley Co., with the late Frank R. Friedley at the helm, acquired the property and greenhouses of the Eadie Co. Upon Mr. Friedley's death last year Herman P. Knoble became the president of the concern, and under his management the future of this business seems exceedingly bright.

"On the shore of Lake Erie, where upon spacious ground now stands the imposing residence of Mrs. J. M. Gasser, the late J. M. Gasser established a small greenhouse plant many years ago. Those of the older members of the S. A. F. who attended the convention at Cleveland in 1896 will recollect with pleasure the generous hospitality of Mr. Gasser at that time, as a reception at the greenhouses was one of the long-to-be-remembered events of the convention. Little did Mr. Gasser think when building his unpretentious Lakeside establishment that the foundations were being laid for a business which, in the years to come, was to expand to the proportions which it has now attained. The greenhouses were later moved to their present Rocky River situation, and extended to comprise about 400,000 ft. of glass, including a recently constructed L & B rose house.

"Among pioneer florists of Cleveland whose names are still connected with a thriving business, are Adam Graham, Herman A. Hart and the late F. W. Zeichmann. It was about 40 years ago that these fathers of the trade began to blaze for the florists' industry in Cleveland, the trail which has long since become for many of the wayfarers who have followed in their steps a highroad to success.

"For a generation, no worker in florists' circles has been more faithful and energetic than Herman A. Hart. Personifying geniality and courtesy Mr. Hart has always exerted his efforts toward the advancement of the profession. A regular attendant at the meetings of the Cleveland Florists' Club since its inception, he has been a moving spirit in all of the club's activities, cheerfully accepting the many responsibilities which have been his. Like has begotten like, and the kindly spirit which he has always manifested toward others is returning to him multiplied to make glad the passing years."

ISLIP GARDEN CLUB.

The regular monthly meeting of the Islip Garden Club was held in the Town Hall on Friday evening, June 4th, about twenty-five members being present with President Lickman in the chair.

A vote of thanks was extended to Mrs. John B. Stanchfield for the use of her grounds for demonstration on spraying and the home mixing of Bordeaux spray, given by the Suffolk County Farm Bureau in connection with the Garden Club. After the ordinary business of the evening was over Mr. Willmirth Haff was called upon to make the presentation of the silver cups given by the club to the winners of the highest points for the monthly exhibits during the year, the first prize going to Robert Lickman and the second to Frank Luma.

The judges for the evening were Henry Rowlinson, William McCollom and Joseph Wood, and the following awards were made: 6 tomatoes, first, Robert Lickman, 2nd, Carl Landolt; 25 radishes, 1st, Frank Luma; 2nd, Andrew Johnson; 2 cauliflower, 1st,

Save your plants and trees. Just the thing for greenhouse and outdoor use. Destroys Mealy Bug, Brown and White Scale, Thrips, Red Spider, Black and Green Fly, Mites, Aunts, etc., without injury to plants and without odor. Used according to directions, our standard insecticide will prevent ravages on your crops by insects.

Non-poisonous and harmless to user and plant. Leading Seedsmen and Florists have used it with wonderful results.

Destroys Lice in Poultry Houses. Fleas on Dogs and all Domestic Pets. Excellent as a wash for dogs and other animals. Relieves mange. Dilute with water 30 to 50 parts.

1/4 Pint, 30c.; Pint, 50c.; Quart, 90c.; 1/2 Gallon, \$1.50; Gallon, \$2.50; 5 Gallon Can, \$10.00; 10 Gallon Can, \$20.00. Direction on package.

LEMON OIL COMPANY

Dept. S. 420 W. Lexington St., Baltimore, Md.

A special prize was also awarded to Carl Landolt for an exhibition of cucumbers.

THE AFRICAN ANCHUSA.

The African Anchusa is not a drowsy flower, and unlike those sleepy heads is most satisfactory for cutting for the house. It keeps fresh for a long time in water where the stems grow and the buds open. In color it is like the Chinese Larkspur, a rich, bright blue. The single floret resembles a forgetmenot with a white eye. In the garden it is not so tall as the Dropmore or Opal varieties of Anchusa. We have not yet wintered it so do not know how hardy it may prove. Neither do we yet know how this wild flower from Africa will be changed by cultivation. We shall gather its seeds so as to experiment with them. We have it in the house in a dull blue vase with large heads of white candytuft to show off its beauty. It would also be pretty arranged with

some small yellow daisy. It is worth growing for its rich blue color and its keeping quality in the house. It is also pretty in the blue bed in the garden.

M. R. CASE.

Hillcrest Gardens, Weston.

June 27, 1920.

GROWING PRIMROSES

Primroses can be grown in a cold frame from now on, and it is a good plan to plunge them in fine coal ashes. Give them an overhead spraying each afternoon if time can be found. Plants from early sowings should now be in 2 1/2 or 3-inch pots. They like a compost comprising equal parts of leaf mold and loam with a little sand. Give the young plants plenty of light, but shade them somewhat from the direct rays of the sun. You can still sow primrose seed. The plants will not be as fine for the holiday season as those from early sowings, but you can have them in good shape for later sales, and even at Christmas time there is often a good market for small plants in 4-inch pots because that is a convenient size for market. A moist heat is desirable in order to induce quick germination of primrose seed. When the plants are large enough, prick out and pot up, and when shading these plants be careful not to overdo the business, for otherwise you may have spindling, weak plants.

An indispensable book for every nur-eryman. Complete directions for prop-agating every kind of nursery stock, with many illustrations. Copies sent from the office of **HORTICULTURE** upon receipt of price, \$2.50.

Little Ads. That Bring Big Returns

Little Ads. in our Classified Buyers' Direc-tory bring big returns to both advertiser and buyer. Anything wanted by florists, gardeners, park and cemetery superintendents, etc., can be sold through this medium. Don't fail to read over these Ads. in each issue and you may find one or more that will prove profitable to you.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. The book is 322 pages well bound and on handsomely printed paper, with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN

With the passing of Independence Day, the florists look forward to a season of two or three months, when the cares of business weigh lightly and consideration can be given to matters other than those concerning the filling of orders. The case is rare where a florist reports anything but good business for the season now behind us. Undoubtedly, it was a good season for, practically, everybody in the business, grower and distributor alike. The consumption of flowers has been enormous, and Mr. Ashbarrel has not been able to get supplies except in one or two cases when natural conditions favored him, conditions out of the control of the florists. All this has been due to a steady demand for flowers.

The people of this country have, within the past two years or more, been educated to a greater use of flowers. The simplest table now must have its floral decoration. Even the most humble homes must be occasionally brightened with a few flowers. Our Campaign for publicity for flowers has been a great factor in influencing this demand. Our own publicity has been instrumental in producing other publicity. Newspapers and magazines in these days teem with references to flowers and their use in domestic life. "Say it with Flowers" has become a thought as well as a message, and our industry profits in consequence. This is a result which it was expected our Campaign would produce—and it comes to us in splendid volume. We can keep it active if we will. It is an asset belonging to all of us, it can be made a heritage if we value it sufficiently.

Many florists, however, fail to see the handwriting on the wall. They seem to accept as a natural condition one that has required effort and the expenditure of large sums of money to create. By their silence and inaction, it might be thought that they were indifferent to our Campaign and its objects. Could greater proof of the efficacy of our work be offered than the fact that in what might have been very, very lean years our industry has not suffered, but, on the contrary, has yielded a greater harvest for those engaged in it than was ever recorded in years we have been used to look upon as "fat" ones? There is an opportunity now to take the

AMERICAN ROSE SOCIETY REGISTRATIONS.

The following varieties have been accepted by the rose registration com-

mittee of the Society and unless objections are received by the secretary within three weeks of this publication the registrations will become permanent:

Name: White Ophelia.

Class: Hybrid Tea.

Parentage: Sport of Ophelia.

Description: The plant is similar to the parent with abundant foliage but stronger growth. The color is white tinted with pink in center, very fragrant and with more petals than the parent. It is also a more robust grower.

Offered for registration by The Cleveland Cut Flower Co., Cleveland, Ohio.

Name: Oregon Ophelia.

Class: Hybrid Tea.

Parentage: Sport of Ophelia.

Description: The flower is similar in shape to Ophelia, light pink in color shading to yellow at base. Fifty-six petals. It is tall growing and hardy, having withstood zero weather unprotected. Prolific, having produced 127 blooms outdoors during 1919. The foliage is practically disease proof and because of the increased number of petals the flower holds its shape longer.

Offered for registration by Clarke Bros., Portland, Ore.

George Watson's Corner

"You in your small corner and me
in mine."

F. Moren Babcock of N. Y. City is out for W. F. Therkildson as secretary of Agriculture. Some of those in the horticultural line in Philadelphia think that if we go into politics we ought to go a step higher than what Mr. Babcock suggests and make our slate as follows:

For President, W. F. Therkildson; Vice-President Israel Rosnosky; Secy. of State, Frank P. Myers; Secy. of Treasury, Miss Anna Jarvis; Secy. of Navy, Adolph Farenwald; Secy. of Agriculture, Luther Burbank; Secy. of Interior, L. K. Peacock; Postmaster Gen., A. C. Zvolanek.

This would cover a wide range in horticultural annals, compliment the founder of Mother's Day, and show our high appreciation of people widely known in our business.

Wm. H. Leonard is summering at his seaside bungalow, Lavellette, N. J. He reports the yachting and swimming fine and the fishing fairly good the past six weeks. Lansdowne sees him only about twice a month.

M. Henry Lynch.

A telegram just received announced the death in St. Vincent Hospital, Indianapolis, of M. Henry Lynch, aged 50, president of the Dingee & Conard Company, of West Grove. He became ill while on a visit to his brother, Joseph, a few days ago. He was reared in the rose growing business and gave it life-long study.

Henry Lynch was not so well known away from his home town as his

brother Joseph. His work was more particularly in the office. He acted as secretary and treasurer of the Dingee & Conard Company for many years. He was connected by marriage with the founder of the company—the late Charles Dingee having married his sister. Henry was a quiet, unassuming, gentle soul, beloved by all who knew him. He started working in the greenhouses when he was a little boy and rose through successive stages to be the head of the house. His brother P. Joseph Lynch is secretary to the Attorney-General of the State of Indiana at present with headquarters in Indianapolis, but still retains his interest as an official of the West Grove establishment, besides owning and running a rose business of his own at New Castle, Indiana. The deceased owned a nice farm near the D. & C. place and for the past year or two had largely retired from active work in the rose business leaving the hard work to his youngest subordinates. The heartfelt sympathy of the trade goes out to his sorrowing family.

THE MARKET.

There has been very little change in the market since last week. Flowers are selling at practically the same prices, and the market is very quiet, no new developments of any kind being reported.

NOT AT ALL DIFFICULT

"Isn't it rather difficult to raise roses at this season of the year?" queried the customer.

"On the contrary, it's dead easy," remarked the florist. "Only this morning I raised them from \$2.50 to \$3.00 a dozen."—*Market Growers Journal*.

Luther Burbank has been taken to a sanitarium in San Francisco.

GRADUATES FROM SCHOOL OF HORTICULTURE FOR WOMEN

Twelve young women from various sections of this country and Canada, have just completed the spring course at the School of Horticulture for Women, at Ambler, Pa., and are now gathering and preserving the fruits and vegetables which they planted early in April.

In celebration of their successful harvest, the graduates were entertained with a tea by Miss Jane B. Haines, president of the school. Among those who attended, was Miss Eleanor Fullerton, a member of the junior class, who just returned from France where she assisted her father in reconstruction work.

The graduates include: Mrs. Richard Bishop, and Mrs. Henry Blomley, of Germantown; Mrs. N. C. Cragor, of Radnor; Mrs. William G. Horse, of Chestnut Hill; Mrs. H. C. Quest, of Ardmore; Mrs. Edward Rice, Jr., of Logan; Miss Helen F. Mulliner, of Camden; Miss H. D. Drayton, of Maine; Miss Margaret G. Laidlaw, of Toronto; Miss Anna L. Prichard, of New Hampshire, and Mrs. F. M. Whitlock, of Cleveland, Ohio.

GOOD WORDS FOR A FLORIST

The language of flowers, their history, growth and cultivation, are as an open book to Carl Reck, the Main street florist, who has been actively engaged in the raising and selling of every variety of flower and plant for the last 25 years. Mr. Reck took over the florist business established by his father in 1874.

Mr. Reck's hothouses and flower shops have been institutions in Bridgeport since the city was in its infancy, and they have grown and expanded in keeping with "New England's greatest industrial center."—*Bridgeport, Conn., Telegram*

HORTICULTURE

Vol. XXXII

JULY 10, 1920

No. 2

THE TALK OF THE TRADE

It is time now to be thinking of sweet peas for early flowering under glass, and while there is a long list of varieties, many of them good, when it comes down to the fact of the matter it is advisable to handle but a few of them. For instance, in the pink shades there is a very complete list ranging all the way from very light to deep rose, but the grower who plants heavily of such varieties as Rose Queen, Yarra-rawa and Mrs. Skach will get pretty good results from the market. Of course there are other very excellent varieties such as Miss Louise Gude, Cherry Ripe, Burpee's Daybreak and Primrose, but these are valuable principally as sorts to make up a variety.

In lavender, Spanolin ranks very high. Early Lavender King and Mrs. Charles A. Zvolanek are also excellent in their shade, and I believe that Watchung Orchid stands near the top in white, also White Orchid has been a standby. Mr. M. Spanolin is also good. Daintiness is a very pretty white with a light pink tint.

In the old Blanche Ferry type there are two other very good varieties, Christmas Pink Orchid and White Orchid.

It is not a bit too early to get the sweet pea crop started now for the coming season. There has been a good market for a number of years past, and there is no reason why the same should not follow true this year.

As was expected, Purity Freesia bulbs are in rather short supply. While the smaller sizes have not tightened up a great deal up to this time, half-inch and on through the larger sizes to the mammoth are already being sold subject to crop; consequently anyone contemplating growing freesias in any quantity should look out that his order is placed without any delay. The quality of the bulbs will in all probability be up to normal, but the supply is not going to be enough to take care of everyone with a full quantity.

Every day brings in reports of increased rose planting and it is very

seldom that such a large amount of new planting is done as happens this year. For the past two weeks there has been as heavy a call in young rose stock for planting as at any time this season, with Columbia and Premier the leaders. It is mighty fortunate that these varieties do so well on their own roots, as there is practically no grafted stock available. Mr. James A. Budlong of Auburn, R. I., told me the other day that if he did not know just where the grafted stock of these two sorts was planted he would not be able to distinguish between these and the own root stock.

Word from the Pacific Coast would indicate that Mr. William H. Elliott is having a most enjoyable vacation, and it is expected now that he will remain there until about the middle of October. He has joined the Sierra Club and is having great sport mountain climbing. The Elliott ranges are being very ably taken care of by his son John, in Madbury, N. H., and George in Brighton, Mass. All their stock is in very good condition and they are among the fortunate few who seem to have no worry as to coal for the coming season. The coal situation has not eased up in any way during the past few weeks, and I believe the flor-

Yarra-rawa Sweet Pea

ists are acting wisely by taking every bit that they can get just as soon as they can. It has now come to the point where it doesn't seem to be a question of price but of delivery. The motto of all now seems to be, get it any time you can, the sooner the better.

Snapdragon for cut flower purposes will again be a staple article through all of the Eastern markets. Such varieties as Nelrose or Silver Pink, Phelps' White and Yellow and Keystone are the standard sorts, with Nelrose and Silver Pink the leaders. The grower who has light, airy houses which are not too wet from leaky roofs and other such causes can have a paying crop without an unusually heavy expense for labor or heating.

Several new varieties are being offered. Philadelphia Giant Pink is mighty pretty, and a deep yellow to bronze shade called Orlando is attractive. There is not much difference in the growth of snapdragons, it is more a question of getting color shades that will appeal to the public, but year after year we always find Silver Pink to be the most popular.

CHARLES WILLIS WARD

Chas. W. Ward, one of the most famous carnation experts in the country, has passed away in California. Mr. Ward was born in Michigan in 1856, and did not enter the florist business until after he had reached maturity, when he spent some time in Switzerland, where he engaged in the watch business. Then he returned to the United States and built two small greenhouses on Long Island. It was he who conceived the idea of forming the American Carnation Society, and soon after he went into carnation growing on a larger scale. Upon buying the Halleck farm at Queens, N. Y., he decided to give his life to carnation growing. After a time he took up hybridizing and made a number of important crosses. Some of his introductions include Sensation, Lieut Perry, New York, John Young, Almo Ward, Harry Fenn, Gen. Gomez and Mrs. C. W. Ward, the latter having become by far the most prominent.

Cottage Garden, as his place became known, soon acquired wide fame for its carnation introductions. Later Mr. Ward specialized in geraniums, and took up other plants, until he gradu-

The Late Charles W. Ward

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00

MICHELL'S SEED HOUSE

518 Market Street Philadelphia, Pa.

ally went into the nursery business at Queens. In 1903 he published "The American Carnation and How to Grow it." In 1912 he went South and located at Avery Island, La., where he started the monthly magazine, "Outdoor World." Still later he went to California and embarked in the nursery business on a large scale at Eureka.

Mr. Ward is survived by a widow and three children, one of whom, David Ward, is president of the Cottage Garden Nurseries at Queens, N. Y. Mr. Ward was one of the most remarkable characters developed by the nursery business in the United States, and was known in every corner of the country.

PRESIDENT MILLER'S MESSAGE **He Has Something to Say About Publicity Work at the Convention**

The principal feature of the afternoon session of the second day of the convention in Cleveland, August 18th, will be a rally to the Publicity Campaign. Reports from the Chairman and Secretary of the Publicity Committee will be forthcoming, and there will be occasion for congratulations all around upon the great success of the campaign. Major P. F. O'Keefe of Boston will favor us with another of his most eloquent addresses on the subject of "Publicity for Flowers," and we shall be reminded of many things which in the ordinary course of matters are likely to be overlooked.

There will be no lack of enthusiasm at this meeting, and every contributor to the fund should be present, if it is at all possible. And there will be information and encouragement for many who have not yet contributed. There will be opportunity for those who do not read to get oral descriptions of this great and grand work. If the Society had done nothing else but launch this campaign of publicity for our products, it would have done well and proved the worth of the organization to us all.

Do many of you, my brother members, realize fully the advantage this publicity work is to you in your business? Do you realize that the great public is being constantly urged to "Say it with Flowers." There is hardly an occasion when flowers are not appropriate for the conveyance of sentiment—a birth, a birthday anniversary, a graduation, a confirmation, a wedding, a wedding anniversary, acknowledgment of a courtesy, congratulations, expressions of sympathy, love, honor, regard, flowers convey the proper sentiment in every case. And in order that occasions shall not be forgotten, the Campaign reminders appear in a number of the national magazines.

Are you helping to pay for this publicity? If you are not, you certainly

should attend the convention, and listen—yes, listen to the enthusiasm which will be expressed in the proceedings of the session I have mentioned. It would do you good. You would learn that the campaign has increased the demand for flowers. Many of your brother florists would be glad to convince you that flowers are being used today in much greater quantity than could possibly be imagined; that occasions such as I have mentioned are remembered by gifts of flowers as they never were before. The campaign slogan has gone home, these people will tell you, the message "Say it with Flowers" has had its effect.

The committee will report at the convention the status of the Campaign Fund, and unless a little more interest is shown in the work, they may not be able to make as good a showing as they did last year at convention time. We certainly should not go backward, nor should we stand still. There are plenty of florists who have not yet subscribed who can and might reasonably be expected to chip into the fund. It's their duty to do so—to put the matter plainly. "Say it with Flowers" is working for us all, and it should be kept working to the fullest extent possible. Gentlemen, the determination of the extent is in your hands through your support and contribution. Will you turn in that little subscription expected of you, or will you risk the consequences of a curtailment of the publicity which has been of so much good to us all? Let us hope that a cheque will be your answer—our society will appreciate it.

A. L. MILLER, Pres.
Jamaica, New York.

FOUNDER OF PANSY PARK DEAD.

Lafayette Goodell, proprietor of the famous Pansy Park estate in Dwight, Mass., and for years a prominent horticulturist and seedsman, was found dead in his home at Pansy Park, death being due to natural causes. He died in the house in which he was born and had always lived.

Mr. Goodell was the son of Asahel

and Charlotte Goodell, his mother being a descendant of Roger Williams of Rhode Island. Inheriting his mother's love for flowers, Mr. Goodell devoted his entire life to the culture of flowers and transformed his homestead into Pansy Park, a beautiful flower garden which for years has attracted many visitors from great distances.

His flower seeds were sold all over the country and as a florist and seedsman his services and plants were in great demand. He received orders for years from public parks for thousands of pansies and other plants.

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

One matter was brought up at the convention Catalogue of the American Seed Trade in Chicago. Inserts that is worth the attention of all seedsmen, and for that matter, everybody else in the trade who gets out a catalogue. The matter was brought up by Mr. Alexander Forbes, chairman of the committee on postal legislation and had to do with the use of inserts or slip-ins mailed in catalogues. It was pointed out that the authorities require everything of this sort to be bound in or tipped in. If the inserts are loose, extra postage is likely to be demanded. The late Maurice Fuld had experience of this kind. He mailed his catalogues with loose inserts and as a result was held up by the post office department, the catalogues not being delivered until Mr. Fuld had paid an extra charge of one cent on each copy. At the convention Mr. Forbes recommended that seedsmen be careful to obtain rulings from their local postmasters before attempting to mail any material about which there may be any doubt. We consider that this is very good advice. Likewise it pays for seedsmen to ascertain carefully what the weight of their finished books will be, for sometimes dropping out only a few pages will make a very material difference in the cost of mailing. New regulations which govern the return of fourth class matter when not delivered have been made by the post office department. They should be carefully studied by any member of the trade who issues catalogues or any matter which goes in this class.

Professor Sargent's Medal

One of the pleasant episodes in the course of the convention held by the Garden Club of America last week was the presentation of a medal to Professor C. S. Sargent, director of the Arnold Arboretum. The presentation took place on the occasion of a visit by the delegates to the Arboretum, which was thoroughly inspected. As a matter of fact, it was because of the location of the Arboretum in Boston that the Club

held its convention this year on the North Shore. The medal given to Professor Sargent was in recognition of his work for the garden makers of the country, and expressed the belief of the delegates that he had done more for the advancement of horticulture in the United States than any other person. Nobody who knows the extent and range of the director's labors will deny the justice of this claim. Professor Sargent has made himself one of the most distinguished men of the age, and has showed a capacity for work and an enthusiasm for horticultural interests which is rare.

While amateur flower exhibitions in America Flower have not yet reached the high plane of those Shows which have for many years been a feature of the horticultural world in England, yet they are advancing rapidly in this direction. It has been insinuated on many occasions that the people of the United States as a whole lacked the esthetic qualities necessary to the appreciation of exhibits such as attract all classes of people across the water. Any such opinion would have to be revised, however, upon visiting one of the shows which have been held continuously in one city or another throughout the country for the last month. The fact is that the making of gardens along well-thought-out lines and the growing of the best which the nurseryman and seedsman have to offer has been taken up as a means of recreation and pleasure by increasing numbers of people since the close of the war. Seldom has the demand for ornamental plants been so great as this season, and landscape architects report many new and in some cases elaborate gardens under way, although this work has been restricted to a large extent by the high cost and scarcity of labor.

The contrast between the shows of last year and those of this season have been especially marked in Boston. A year ago the peony and rose exhibits in June at Horticultural Hall found many bare tables. This year the tables have been filled with exquisite specimens from scores of gardens and the attendance has been of record-breaking character.

Truth to tell, the women of the country deserve much of the credit for the present renaissance of flower growing, and especially for the development of the flower show as it is known in America today. Hundreds of women in almost every state have become banded into garden making clubs, with a national organization which has just held a convention at Manchester-by-the-Sea. Almost all of the most important shows have been sponsored by women who have been responsible in a large measure for the artistic results.

A good example of the flower show carried on today was that given by the Norristown, Pa., Garden Club recently. This is one of the most successful clubs in the East, with the keynote of civic welfare and a perpetual effort to stimulate interest and effort in the beautifying of local environs. One feature of this show was a miniature garden, with a border of old-fashioned garden posies arranged under the direction of Miss Bertha Harry. In the garden was a tiny bird bath, a sundial, well made walks and an artistic gate. In the hall was a real water lily pond, and nearby a bride's table arranged all in white. Adding to the effect of the show were many clever and artistic posters painted by the art students of the Norristown High School, all of them having flower themes. The ladies learned of the work which the students had done along this line and seized upon them as presenting unique advertising possibilities. For several weeks before the show the best of them were displayed in various shop windows around town to advertise the exhibits. The flower show is to be encouraged by the trade and by all others who are interested in horticultural papers.

FLORISTS' PROBLEMS.

How They Are Regarded by a Writer in the New York Herald.

It is quite unusual to find the newspapers giving the intimate details of the florists' business as does a recent issue of the New York Herald. Evidently the article was written or inspired by somebody who is familiar with the business. Doubtless there are florists who will disagree with what is said about the Hadley rose, however, although there are decided differences of opinion as regards the money making qualities of this rose. The article follows:

In Manhattan alone there are 356 retail flower shops and 61 wholesale market firms.

Seagoing tourists in times when they were commoner, used to help swell the summer profits. Every outgoing liner meant a heavy day's sales. Mother's Day is climbing as a factor in the florist world. All sorts of flowers are taking the place of the rather funereal white carnation with which it was originally celebrated. The coming of Easter after a long, dull Lenten stretch always causes a sudden jump in the market.

The big problem of meeting the seasonal and particularly the one day, special demands is how to make the supply mature on exactly the proper date. The rapidity of that maturing depending on the sunniness of the weather, it is impossible to set a date on a crop until it is too far along to be materially retarded or forced. A steady, year-through flower habit is what the trade hopes to build up. Its national slogan of "Say it with flowers" aims to attain this end.

Much of the market stock these summer days is outdoor grown. Lilies of the valley, iris and the later asters and dahlias virtually are never blossomed under glass. In the weeks just past garden daffodils came up from Florida. They, with Florida ferns, are about the only large crops that come to local markets from further away than Pennsylvania.

During the spring months country wild flowers have mingled with their city cousins in the shops. And always there are roses. Although the love of roses in general is never superseded, styles in their shape, coloring, perfume and stem length change from year to year. The very latest right now, the debutantes of the year, are the pink Dunlop and Pilgrim and the red Crusader.

The Hadley red rose, named for the Massachusetts city in which it was evolved and probably as beautiful a rose of its color as has yet been grown, is passe. There's a reason. It didn't pay. In spite of the big price its velvety texture and rich coloring commanded, it didn't yield the proper profit per square foot in the greenhouse. It had a tendency to go blind, meaning that the eye from which the blossom stalk should develop was apt to die in its early stages.

Madam Butterfly, a salmon colored elaboration of the popular Ophelia rose, sells higher than the parent flower because it has the trait specially sought for in a pink rose of retaining the vivid coloring of the bud in the full blown blossom.

Mr. Charles F. Boyle, president of Thos. F. Galvin, Inc., is spending the month of July on Nantucket Island.

AMERICAN SEED TRADE ASSOCIATION.

At its 38th annual convention in Milwaukee, the American Seed Trade Association elected the following officers: President, H. G. Hastings, Atlanta, Ga.; 1st vice-president, L. L. Olds, Madison, Wis.; 2d vice-president, Alexander Forbes, Newark, N. J.; secretary and treasurer, C. E. Kendel.

The new president, Mr. Hastings, is general manager of the H. G. Hastings Co. of Atlanta, and was born in Springfield, Ohio, in 1869. In 1884 he moved to Florida, where he began growing oranges, with the seed and nursery business as a side line. In 1899 a new company was formed in Atlanta, with Mr. Hastings as president. The firm does a very large mail order business, sending out a million catalogues every season.

Flowers Under Glass

If seed of perennials are sown now, they will give plants large enough to transplant this fall, and to get well established for standing the winter. It is best to sow the seed in frames which are situated so that water can be given conveniently. You can use any light soil which has been made thoroughly friable, but keep the frames shaded and moist until the seedlings are started. When the seedlings are large enough to handle you can prick them out, but should keep them shaded for a few days until they get started. If deemed desirable, there is no reason why you shouldn't transplant them to another cold frame and keep them there during the winter. In this way they will have some protection during the severe weather.

While cattleyas are making active growth they will need plenty of water at the roots, also a light syringing overhead two or three times a day. It is well to damp the floors and benches at least twice a day so as to give a good humid atmosphere. When cattleyas have completed their growth they should be placed at the coolest end of the house, or at least in a position where they can be given an abundance of air. Cut off the water supply until only enough is given to keep the plants from shriveling. Later you can provide more airy, dry and sunny quarters so that they will ripen up their growth well. Very little water is needed at the roots during the resting period, but a gentle syringing on bright days will tend to keep the growth healthy. Other orchids now finishing their growth should be removed to a cooler house that is slightly shaded in order to prevent a second growth.

Chrysanthemum plants in the late houses should be kept growing as fast as possible. Buds that appear between now and September should be pinched off, and on the appearance of mildew the grower should use sulphide of potassium, half an ounce to a gallon of water, for spraying over and under the leaves. The plants that were benched in May will be the better for feeding now, the best fertilizer being bone meal, with half an inch of well rotted cow manure. The latter will help to keep the beds from drying out and cool the roots. Remember that

the whole to tie to wire than to stakes, for then there is an opportunity to fasten the plants on a slant instead of straight up. This, too, helps to induce them to break more freely from the bottom. Mr. Arthur Ruzicka advises using five wires to four rows of plants, as this makes it possible to distribute the growth well along the wires. The plants then have plenty of room, and are easier to syringe than if confined to four wires.

It is important not to tie the wood too tight because the canes naturally double in thickness during the season, and with tight knots the strings will cut into the wood. Try to have the braces at the ends of the benches so firm that there will be little give when the wires are stretched. This is important, for it takes a pretty strong brace to hold fifteen wires stretched taut. A lighter brace will answer in the center, for it is only to support the wires. With the high price of wire which prevails now, the grower should make it last as long as possible, and it is also necessary to save labor. Both purposes are accomplished by tying the ends of the wires carefully to the braces so that they can be untied next spring without difficulty and without damage to the wires.

It will be necessary to scratch over the benches quite often in order to eradicate the weed growth. Be careful, however, not to make the soil too fine, for when it is a little rough watering is easier and the water does not run off the bench so readily as when the surface is very smooth. When the plants are established the benches should be scratched over very lightly so as not to disturb the roots.

TEXAS FLORISTS' ASSOCIATION.

The Sixth Annual Convention of the Texas State Florists' Association will be held at Fort Worth, Texas, July 20-21-22. Headquarters, Auditorium Fort Worth Chamber of Commerce. The program is as follows:

July 20, 2:30 P. M.

Meeting called to order by V. J. Davis, vice-president, and president Fort Worth Florist Club.

Invocation—Rev. L. D. Anderson, Fort Worth.

WEEK END BOUQUETS.

How an Active Young Woman Increased the Business of a Neighboring Florist.

It pays to read the magazines. Sometimes a florist can find hints even from a woman's magazine. In a recent number of the Designer, for example, is an article by a young woman in which she told how she increased the business of a greenhouse man and added to her own income at the same time. It seems probable that other florists can get suggestions from this woman's experience. Accordingly a part of the article is reprinted herewith.

My mother was a semi invalid. She and I lived alone, and although we had some income, it was not enough for many pleasures or luxuries.

Next door to us lived a florist, and each Saturday he brought my mother a bouquet of some kind at the same time that he brought his wife flowers for their own table. This little kindness was so unfailing that my mother and I began to regard it as part of our lives, and our anticipation and appreciation were always sincere. So accustomed did we become to planning for this little courtesy that I began to wonder why more people did not buy flowers for the week-end and special family days, and after reflection I decided that they thought it was too expensive. Then I came to a further conclusion: it is only flowers by the box or the dozen that are beyond the purse of the average family for every week. But why not buy one pretty rose or a tiny spray of sweet peas or violets or just two or three carnations? Any of these in a pretty vase or bowl suited to them would add a touch of festive sweetness to a family table without overstepping finances. I kept thinking along this line for several weeks until I had a definite plan of action in mind. Then I said to the florist: "If you will let me have a chance, I believe I can increase your business."

"Go ahead," he replied, "for that's what we're after."

The next day I visited one of the large office buildings in our city, and talked with the doctors, dentists, real estate men and attorneys who had headquarters in the building. I offered for one dollar a month, or twenty-five cents a week, to send their wives a small decoration of flowers for the

BOSTON, MASS.

house. I made a guarantee that it would always be full value, although at different seasons it would be of distinctive variety. Under these conditions I offered to write a contract for a year, payments monthly.

The little surprise idea and the moderate amount to be expended carried an appeal, and I secured contracts from nearly every one whom I solicited.

Of course my florist was delighted with the success of the scheme, and he offered me 25 per cent on all orders that I might take thereafter, either by contract or other method.

One of my new customers said his wife was out of town for six weeks, but that I might date his contract at once and send the flowers to a hospital ward until she returned. This gave me another idea, so I went to one of our local philanthropists and asked him if he would not like to make a contract, under special inducements, to supply over-Sunday flowers to the hospital. He agreed to think the matter over, and inside of a month he called me up and gave me his order.

A YEAR OF ROSES.

I could not work every day, as interruptions at home prevented, but I thought and planned when I couldn't go out, and was prepared for action when I did.

I visited the meetings of the various aid societies and church guilds, to offer my plan for providing flowers for the Sunday church services. In

these cases I was able to make very good terms to them because the flowers only needed to last the one day and I could send a large bouquet of full-blown flowers.

Then I started a "business birthday-book." Whenever I heard an exceptional woman remark that she was having a birthday, I put her name in my business birthday-book, and bided myself to her husband as a gentle reminder of his duty on this occasion. Gradually these busy husbands have come to leave this question of birthday and anniversary remembrances of flowers to me.

I have found that the holiday season is quite a harvest-time for my business. Many a wife has been presented with "a year of roses" at Christmas, and like a magazine subscription, the gift is appreciated more every time it arrives.

I also found in connection with the holiday season that very often sons and daughters who are away from their parents a good part of the time, are glad to subscribe to this contract plan of mine and thus provide a bit of cheer for the home that they leave behind.

Incidentally I have acquired considerable business through people who live distant from our city and have interests in our local cemetery. These friends are glad to have a personal agent who will agree for a reasonable sum to provide floral decorations at stated times.

RACHEL WAY.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

This has been a wonderful year for the peony growers, not so much because of the quality of the stock as because of the interest shown by all classes of people. The exhibits have been largely attended and much enthusiasm has been shown. The public is just beginning to realize the adaptability of the peony, and even commercial growers are sometimes surprised to find how readily it makes itself at home under adverse conditions. Mr. Harry A. Norton, who has a fine place at Ayers Cliff, Quebec, was heard with special interest at the recent meeting of the American Peony Society at Reading, Pa., when he said that peonies grow in some places where it is almost impossible to cultivate other vegetation. He says he has been successful in growing peonies in the open at his place, although the thermometer goes to 40 degrees below zero at times. Apple trees have succumbed to the rigorous conditions, but in the same soil the peonies have gone through the winter safely and produced prize winning blooms the next summer.

Mr. Elmer K. Schultz, of Langhorn, Pa., is among the growers who came

into prominence at the Reading show. Mr. Schultz, who has a large acreage of peonies on the estate of his father near Niantic, received seven prizes out of eight entries. In addition to these first prizes, Mr. Schultz was awarded the American Peony Society silver medal, which is the second highest prize offered by the Society. The Schultz estate has been a great show place this season, a continuous stream of motors arriving and departing while the exhibit was at its height

A few days ago I had the pleasure of visiting the home of Mr. Louis Graton, the originator of the St. Martin strawberry. He was just back from Newport where he had won a first and second prize and a silver medal for his berries. Naturally he was quite happy over this recognition of the St. Martin's merit. An interesting happening in connection with the exhibit was the fact that a man to whom he sold plants in March also showed St. Martin berries and received a certificate of merit. These berries, of course, were grown on the plants set out this spring.

Mr. Graton's little strawberry plantation is a marvel of neatness, with

not a weed to be seen and the rows as even as though they had been run by a surveyor's instrument. The weather this season has interfered greatly with the production of first class fruit, but the vines were loaded with berries of excellent quality, notwithstanding.

The energy and stamina of the berries may be judged by the fact that that one plant which has been allowed to go its own way for the sake of seeing what it would do has made fifty-three runners, and is still going strong.

From what I have seen it seems apparent that the St. Martin is destined to take its place as one of the best berries for home or market, at least in New England.

The rose gardens this year have been a little disappointing, not so much because they have lacked bloom in abundance but because of the uncertainty of their blooming period. In many cases they have been two weeks late and visitors who expected to see them in full bloom found only buds. However, they are now flowering very well indeed, considering the hard winter, although it must be confessed that even the most expert rose growers in the Northern states lost heavily.

It is interesting to find people becoming more and more enamored of the climbing roses. They are now being grown everywhere, and the newer varieties add greatly to the beauty of suburban and country homes.

THE CLEVELAND SCHOOL GARDEN MOVEMENT

The interest shown in school gardening by the National Association of Gardeners following an invitation of the School Garden Department of the Board of Education of Cleveland, which was extended to the association at its convention in that city last August, to co-operate with it in the development of its school garden movement, and the practical suggestions given by the association's committee on the subject has resulted in the appointment of G. H. Pring, Horticulturist of the Missouri Botanical Gardens of St. Louis, as instructor of the Cleveland summer school.

The National Association of Gardeners at its convention appointed a committee composed of Mr. Pring, Arthur Smith of New Jersey, and M. C. Ebel of New York, which after surveying the Cleveland school garden work, made recommendations that were approved by the Science Department of the School Board of Education. An appropriation of \$23,000 was made by the city for promoting the school garden work during 1920. Thirty school garden teachers are attending Mr. Pring's class as part of their regular program. The remainder of their time is spent in visiting children's home gardens, and supervising the youngsters' work on a dozen large tracts. There are 8,848 children under the direction of O. M. Eastman, garden supervisor.

Last year the school gardens numbered 7,840 having home plots, and 415 on large tracts. Reports made at the end of the season showed that they had cultivated 175 acres and produced

crops valued at \$79,835. Mr. Eastman is confident that this season will result even more successfully, one reason being the added efficiency of the workers who attend the class in horticulture. The course continues for six weeks and includes lectures on elementary gardening and practice work in the school gardens.

Up to 1918, not more than \$500 a year had been expended by the Cleveland schools for promoting school garden work.

National Association of Gardeners,
286 Fifth Avenue,
New York, N. Y.

MIGNON DAHLIAS

Among the new flowers offered for our gardens last winter, which have kept true to the promise of the catalogues, are the miniature or Mignon Dahlias. Their stiff little blooms, conventional in their evenly formed rays and yellow disks, tempt us to place one flower with a few buds in a dark colored small necked vase and there enjoy its bright little face. They will keep well in the house if their stems are slit so that they can get all the water they need.

We do not expect our big dahlias to blossom till August or September, but these we set out the first of June just as they were beginning to blossom and hope they will keep in bloom till the larger ones come. We also want them to increase their tubers so that we can edge a long bed with them next summer.

As yet we have not had all the colors promised us by the catalogues, but some have been a beautiful rich, deep red, others white and yellow.

The parent of one must have bloomed near a cactus dahlia last summer, but it is out of line. Much as I enjoy the long feathery petals of the cactus dahlias I prefer these should keep their trim little form. They grow about eighteen inches high and are now well covered with buds.

M. R. CASE.

Hillcrest Gardens, July 2, 1920.

Mr. Rozell J. Bowen of J. Bolgiano & Son, Seed and Grain Merchants of Baltimore, Md. and Mr. C. Alfred Bolgiano, eldest son of Mr. Chas. J. Bolgiano are traveling in Europe, inspecting growing crops in England, France, Germany, Holland and Belgium. This stay will cover a period of several months.

DWIGHT J. CASTLE TO RETIRE AS FLORIST

Dwight J. Castle, South Main street florist, is soon to retire. His greenhouses will be sold or torn down. Mr. Castle has been in the business for 21 years and during that period has built up an enviable reputation for fair dealing and good service. His many patrons will deeply regret to learn of his intention to retire—*Torrington, Ct., Register.*

RHODODENDRON MUCRONATUM.

The well-known "Azalea ledifolia" or "Azalea indica alba" but correctly *Rhododendron mucronatum* is an old and favorite plant in American gardens. Just when it was introduced is uncertain but it was in cultivation with Mr. W. P. Cushing, Belmont Place, Watertown, Mass., in February, 1838. Round Boston this plant is not properly hardy though in a few gardens it lives and flowers out-of-doors. On the banks of the Hudson and on Long Island, New York, it is perfectly hardy and each spring is laden with its large, pure-white, fragrant blossoms. The largest and oldest plant that the Arnold Arboretum has record of is that shown in the accompanying picture. It is growing on the estate of Henry F. Dupont, Winterthur, Delaware, and has been in the possession of the family since sometime between 1835 and 1840. This plant the owner courteously informs us is 6 ft. 9 inches high and 12 ft. 2 inches through. In Japan where this *Azalea* is grown in nearly every garden I did not see a specimen comparable in size with Mr. Henry F. Dupont's magnificent plant.

E. H. WILSON.
Arnold Arboretum.

ARBORETUM NOTES.***Tripterygium Regelii***

Climbing plants with handsome foliage and a conspicuous inflorescence easy to grow and hardy in New England are not too numerous, and Mr. Jack's introduction several years ago from Korea of *Tripterygium Regelii* made an important addition to the number. It is a near relative of the Bitter Sweets (*Celastrus*) and a native of Korea and northern Japan, where it rambles over rocks and bushes, and often climbs with stems

fifty or sixty feet long into the tops of trees. The leaves are long-pointed, dark green, and often six inches in length. The small white flowers are produced in narrow open clusters ten or twelve inches long, and they are followed by showy, three-lobed, and three-winged fruits from half an inch to an inch long. By pinching the young shoots this vine can be grown as a shrub. Such a plant is now growing and flowering in the Shrub Collection, where it is also growing naturally on the trellis next to the different species of *Celastrus*.

Periploca sepium

This is another handsome twining plant which the Arboretum owes to the labors of Mr. Jack in Korea. It is growing on the trellis near the *Tripterygium* and is unusually full of flowers this year. It is a plant with slender stems, pointed dark green and very lustrous leaves about three and a half inches in length and not much more than half an inch in width, and small flowers in few-flowered clusters. The flowers do not make much show when seen from a distance, but on close examination show that they are green on the outside, dark purple with a five-lobed crown at the base on the inside, and that they are pleasantly

LOUIS GRATON,***Originator and Introducer*****Whitman, Mass.**

fragrant. The plants in the Arboretum have not yet produced their slender pod-like fruits, but as they send up numerous root suckers this vine can be easily propagated and might soon become common in northern gardens. Much better known is *Periploca graeca* from southern Europe and western Asia which has not yet proved hardy in the Arboretum.

Lonicera prostrata

The attention of persons looking for plants suitable for ground cover is directed to this Honeysuckle discovered by Wilson near Sungpan in Szech'uan, western China, at an altitude of about twelve thousand feet above sea-level. It has long slender branches which lie flat on the ground, so that the plant is only a few inches high, small bluish green leaves, small inconspicuous yellow flowers and small red fruit. As a garden plant this Honeysuckle has nothing to commend it but its habit which should make it useful to cover the ground among large shrubs and on the borders of shrubberies. *Lonicera prostrata* is growing on the southern slope of Bussey Hill with the other new Chinese shrubs.

The Pennypack Greenhouses, at Holmesburg, near Philadelphia, have been purchased by Dave Allman, formerly of Cornell University. Possession was taken the first of June.

Jos. L. Barnitt, Jr., salesman for A. T. Bunyard, of New York, was recently married to Miss Maud B. Martin, of Ayr, Scotland. Mr. Barnitt is a veteran of the late war, and met Miss Martin when in Scotland. He will be connected with the Newport store of Mr. Bunyard this summer.

More and more the chain idea of flower stores is growing. A number of florists now have several stores in the same or different cities. H. L. Thompson, of Brighton, Pa., is one of the chain store enthusiasts. He now has stores in Rochester, New Brighton and Beaver Falls.

chased the large iron frame greenhouses formerly on the Hodson estate in Newport, and will set them up at Jamestown, where twelve greenhouses are being constructed. Cut flowers will be grown in the new range while the old plant on Narragansett avenue will be devoted to pot plants and lilies of the valley. Last year this concern flowered more than half a million bulbs and 100,000 valley.

It is understood that Gallivan Bros., the Springfield florists, are to erect a new greenhouse at Smith's Ferry in the near future.

THE AMERICAN ROSE SOCIETY.

The Garden Days at the Hartford and Cornell Rose Test Gardens were delightful ones. At Hartford on June 25, while the roses were not fully in flower there were enough attractive varieties to make an interesting exhibit. The attendance was disappointing. However, the majority of rosarians near Hartford are frequent visitors in the garden and doubtless will visit it when the varieties are at their best. The hospitality of the park department in the entertainment of the guests was all that could be desired. A bountiful lunch was provided by G. W. Parker, Supt. of Parks, and Alex. Cumming, Chairman of the Hartford Rose Test Garden Committee, did everything possible to make the day profitable and enjoyable.

At Ithaca the rose day on June 30th was planned to coincide with the first of three days set for Farmers' Field Days at the College of Agriculture. Aside from the delegates from the Auburn, Syracuse and Rochester Rose Societies hundreds of New Yorkers thronged the rose and peony gardens during the three days and many remarks appreciative of the beauty of both areas were heard. Surely this was a splendid object lesson to the visitors of the beauty of the rose. Detailed reports of these two meetings will be made by the chairmen of the rose test garden committees.

E. A. WHITE, Sec'y.

second vice-president, Mrs. John A. Stewart, Short Hills Garden Club; third vice-president, Mrs. Samuel H. Taft, Cincinnati Garden Club; fourth vice-president, Mrs. Francis B. Crowninshield, North Shore Garden Club of Massachusetts; treasurer, Mrs. Hugh D. Auchincloss, Newport Garden Association; secretary, Mrs. Harold Irving Pratt, North Country Garden Club of Long Island.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN.

In a letter covering a subscription to our Campaign Fund, W. H. Flye, Woonsocket, R. I., says: "I plead guilty—have been reaping the benefit of the other fellows' investments long enough."

There are hundreds, yes, thousands of florists throughout the country who might well follow Mr. Flye's lead. We are sure that if they looked upon our movement in the right light, we should not have to make so many appeals for aid. Of course, we know that, in the main, forgetfulness is the reason for seeming apathy. More good intentions are shelved than are put into effect. There is only one way to get them off the shelf, as we all know. That shelf-load for the Publicity Campaign ought by now to be at the dumping point. Why not get your good intention into active shape—let it materialize. You could not set it to work at a better time.

Our Committee—your Committee—are now worried with the problem of completing arrangements for the publicity which we shall need so much a little later on. It is not the development of a plan that causes worry so much as the putting of that plan into effect. The financial end of it is a serious undertaking. The publishers of the periodicals we aim to use are obliged to begin work on their different issues many weeks in advance of their publication dates. They have their own problems to work out, problems which in these days are more or less serious. They must prepare well in advance of their dates, and if they are to be of service to us, we must fall in line with their preparations. We must make out contracts at the time they arrange for a particular issue, and our money to cover these contracts must be in sight also at this time. We cannot expect the Committee to incur liabilities they might not be able to discharge.

Now, it is just this way: if all those florists who have good intentions and the will power to put them into effect will act quickly and let the Secretary know what can be expected of them, the Committee can accomplish much to the advantage of the Campaign. They can put their plans over without disappointment through changes compelled by limited resources. Our slogan, "Say it with Flowers," is too good,

SWEET PEA SHOW IN BOSTON.

Annual Exhibit of the American Sweet Pea Society and Massachusetts Horticultural Society.

If the Massachusetts Horticultural Society had been obliged to depend wholly upon local exhibits, the show at Horticultural Hall last Saturday and Sunday would have been a meager one, for peas around Boston were not in good condition. As it happened, however, the annual exhibit of the American Sweet Pea Society was held at the same time, with the result that a very creditable show was made. The largest exhibitor was the W. Atlee Burpee Co. of Philadelphia, which had its peas arranged in an alcove against a background of black velvet in such a way as to produce an exquisite effect. Other prominent exhibitors were Mrs. S. D. Riddle of Glenriddle, Pa., Geo. Annan Gardener; William G. Taylor of Newport; Alice M. Forbes of Worcester and Allan J. Jenkins of Shrewsbury.

Besides the sweet peas, there were many other exhibits, including a fine lot of perpetual roses shown by Mrs. Lester Leland, Eric Wetterlow, gardener, of Manchester, Mass., as well as a good collection of vegetables and small fruits, those from Hillcrest Farm attracting particular attention.

Mr. A. C. Burrage of Beverly had his monthly display of orchids, and Mr. Thomas Roland of Nahant showed a table of cypripediums which won much favorable comment. Few new plants were offered, but one, a new yellow tuberous begonia, shown by Mrs. Leland, was a conspicuous feature. This begonia has been named Frau Hellen Harms and is exquisite in form and color.

Among the out of town visitors noted were John C. Wister of Philadelphia, Wm. Gray, secretary of the Newport Horticultural Society and John S. Hay of the Henry A. Dreer Co.

L. J. REUTER CO. *Plant Brokers* 15 Cedar St., WATERTOWN STA.
BOSTON, MASS.

Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

George Watson's Corner

"You in your small corner and me
in mine."

P. Joseph Lynch, the noted rose grower of New Castle, Indiana and West Grove, Pa., and who also holds the important office of secretary to the Attorney General of the State of Indiana, visited the trade in Philadelphia on the 9th inst., having come East to attend the funeral of his brother, M. Henry Lynch, president of the Dingee & Conard Co. Mr. Lynch reports the best mail order year in roses in the history of the concerns with which he is connected and predicts with confidence a continuance for the coming year of these favorable conditions. We trust politics will not get this rose enthusiast too deeply in the toils. We cannot spare so valuable a man, even for foreign minister to Rome, Paris, or London. It is whispered around that he is slated for some such exalted office.

"One crane, seven snappers, and all the fish we could use ourselves or give away to those we met," is the record for one day of the Commodore and Jeff on their outing at the seashore. Glad to hear they are having such a good time. Jeff is a good provider—and can dispose of his own share personally. In which thought hangs a possibility. Suppose he happened to eat too much snapper, and have a bad dream, and during the dream the devil

in the guise of your uncle should be labor him with a big wooden club until Jeff was certain that every part of his insides had turned to sawdust pudding? Wouldn't that be awful? Perhaps some unkind person might say it was but a just retribution for a certain evil deed which history records. But far be it from us to return evil with evil, even with the aid of Satan.

Philip Freud of Michell's says he is tired going to the seashore every year for vacation. He has been doing that now for about 20 years. He left on the 10th inst. for a trip inland. Pittsburgh, St. Louis and other points west and southwest. His wife and daughter accompany him.

Charles H. Grakelow who is Exalted Ruler of Philadelphia Lodge No. 2, Order of Elks headed the delegation—twenty special cars to the National Convention in Chicago where they intend to put Philadelphia on the map as far as Elkdom is concerned. They expect to capture amongst other things the first prize in the parade which is a great feature in these annual meetings. Few men know better than Charlie how to manage a parade and we confidently look for him to get first or pretty near it. Twenty-five hundred new members have joined since he became Exalted Ruler about six months ago which breaks the record. Alvah R. Jones, manager in the Pennock Flower Market is a Mason of high degree and thinks well of the Elks and speaks highly of their work. He says that besides the things above mentioned a band patrol and mounted guard has been organized, and other big things are contemplated for Philadelphia, and with such an energetic Exalted Ruler as they now have there is nothing to it but these big little words "A Grand Success" for Lodge No. 2.

GENERAL NEWS NOTES.

Samuel Wax, the well known florist of Boston, has been enjoying a fishing trip to Squam Lake, N. H., being the guest of Daniel F. Cronin, Superintendent of the Public Parks of Manchester, N. H.

The A. M. Tuttle Co., of Melrose, Mass., has been incorporated and will deal in shrubs, vines, flowers, etc. The directors are Alton M. Tuttle, president; Howard P. Shaw, treasurer, and Albina Tuttle.

Joseph Manda & Co., the prominent florists of West Orange, N. J., have secured permits for the erection of four new greenhouses on Valley Road, to cost about \$10,000.

The Baker Seed House business at Rutland, Vt., has been sold by Sidney A. Baker to his brother, George H. Baker. This house is one of the most modern plants of this kind in Vermont, with two greenhouses, each 204 feet long. It also controls a farm of seventeen acres. The business was founded by Sidney Baker about twenty-seven years ago.

Calvin A. Hodges, a well known norrist of Watertown, N. Y., died recently, after a long illness. He was 67 years old.

The Canadian Horticultural Association will hold its annual convention at Hamilton, Ont., Aug. 10 to 13, inclusive.

The Cooperative Flower Market and the Boston Flower Exchange are closing at noon Saturdays during July and August.

F. R. Kaulback is making a long trip through Nova Scotia and the land of Evangeline, traveling by automobile.

JULY 10, 1920

No. 2

THE TALK OF THE TRADE

Do high prices offset the lack of sales? That is a question which Mr. N. F. McCarthy, the well known plant auctioneer of Boston, is trying to answer. Mr. McCarthy reports that while buyers seemed perfectly willing to pay whatever was asked for the goods, the volume of sales was very much less than in the years before the war. This he accounts for in large measure by the fact that nearly all of the large estates at Newport, Lenox and other summer places are running in a very limited way. Ordinarily the smaller nurserymen have bought heavily at the auction sales in Boston and have resold the stock to the owners of large private estates. Of course there has been few transactions of this kind this season. A large proportion of the people who have been making a lot of money the past few years are not people who have acquired as yet much of an interest in gardens and the decoration of their grounds. Perhaps this will come later, but the old time buyers have been largely out of the market.

Without doubt Mr. McCarthy has on hand at the present time the largest stock of bay trees and rhododendrons in the country. He has 450 excellent specimens of bay trees alone. Most of his stock is now at the nursery which has been established at Montrose, Mass., a few miles from Boston. It is interesting to find that a great many sales have been made at the nursery this spring, something which has been due presumably to the fact that the nursery is close to a much traveled highway. Mr. McCarthy said that it was a common thing earlier in the season to sell from three to five hundred dollars' worth of plants between four and six o'clock on Sunday afternoon. During the day a constant stream of automobile riders would pass, but never did buying begin until late in the afternoon. Then it would come with a rush.

Mr. McCarthy also reports that the sale of roses has not been as heavy as for many years. When the season began the call for perennials, however, was large, and the auctions were very well attended. Later, however, interest dropped off. As a matter of fact,

the number of perennials offered has not been as large by any means as usual, because the growers have not offered a great quantity, owing to the lack of production during the past year or two.

Mr. Walter S. Schell, a prominent and progressive seedsman of Harrisburg, Pa., has just purchased the four story building recently given up by the Standard Baking Co. on Tenth and Markets Sts. This is a modern building and will be used by Mr. Schell for his growing business. It had been Mr. Schell's intention to construct a large seed store on a lot at Fourteenth St. and Market St., owned by him and at present occupied by a temporary seed and implement warehouse, but owing to the high cost of construction work, Mr. Schell thought it best to sell the lot and buy a building already erected. As a result of Mr. Schell's enterprise, he has been able to greatly enlarge his list of customers and is now looked upon as one of the leading seedsmen of central Pennsylvania.

Prof. E. H. Wilson, Assistant Director of the Arnold Arboretum, Jamaica Plain, Mass., is now on the water headed for England, having sailed from New York last Saturday morning. Mr. Wilson told me before leaving Boston that he expected to be away

Prof. E. H. Wilson

about three years, possibly longer. He will spend about six weeks in England, which he has not visited before for nine years. Of course, he will visit Kew and other prominent gardens to see what progress is being made in growing the plants which he has introduced from time to time from other countries of the far East.

From England he will go by way of the Suez Canal to Australia, and spend several months in that country, Tasmania and New Zealand. He expects that about next May he will be on his way to India. Just where he will go after that is uncertain.

While Mr. Wilson will keep an eye out for any good plants adapted to American conditions, he will look especially for conifers, of which very few native to the countries mentioned are now being grown in America. After all, though, the most important object of his trip is to make scientific connections between the Arboretum and leading horticultural institutions in other places. It is expected that he will acquire many valuable books and pamphlets to add to the Arboretum library, as well as many important herbarium specimens.

As Mr. Wilson said just before he left, "There is really not much incentive to the introduction of living plants or of seeds under the present drastic ruling of the Federal Horticultural Board at Washington." Any seeds which he might send back would have to go to Washington before they reached the Arboretum and undergo a baking process which is not favorable to their germination.

One who has gone through the rose houses of the Budlong Rose Company, Auburn, R. I., and noted their growing conditions of a few years ago, cannot be but impressed with a general change under present conditions, and this has been caused by the increase in operating expenses, particularly fuel and labor.

Only a few years ago there was a general wet treatment being used on this entire plant; you could hear water dripping and see it running down the walks at all hours of the day. High temperatures were run during the daytime, while at night average rose temperatures from 58 to 62 degrees were maintained; but on sunny days even in the summer steam was kept

on and roses were kept on the jump day in and day out. Now this system has changed. I hadn't been in the houses but a few minutes when I felt something lacking, and the first thing I noticed was the absence of water. This has been cut down materially and it is also the case with heat. Where once you would see foremen and helpers in all directions, they are now few and far between, but strange as it may seem this has not resulted in any lowering of quality.

I asked Mr. James A. Budlong what the results had been and I understand from him that they are getting quantity as before with possibly in some cases an improvement in quality. Those rose houses today as always are in tip top shape from one end to the other. Never is a crop left in that does not keep on its toes every minute; it soon is replaced with new planting, and to my mind this is as interesting a rose place to visit as I have seen.

The lessons of the past two seasons with the scarcity of *Vinca variegata* has evidently taught many of the florists to be prepared for the coming season. Small stock such as 2 and 2½ inch has been in good demand, propagating has been done in large quantities, for those florists who raise their own stock for local retail trade are planting into the field good quantities of vinca for lifting next fall, which, of course, will give them good stock for the spring sales. This is an easy plant to handle and there is no reason in the world why growers should not raise their own stock and have enough for all their demands. It isn't too late now to strike cuttings and get good 2½ and 3½ inch plants for next fall, as they can remain in the field until the last minute before freezing, then carried along on the edge of the benches, on shelves and other spaces of small value.

Week after week we get different angles of the coal situation and when it is all boiled down the fact remains that there is danger of a very short supply. Any grower who can get delivery on any coal at all had better take it when he can get it. I was interested to note what some of the Philadelphia growers were doing in this respect.

While in years past many Philadelphia growers have burned quite a lot of Buckwheat, No. 1 and 2 sizes, even those who have been in the habit of sticking to soft coal are switching over to this grade anthracite, and this is not only true of Philadelphia in particular but is showing up all through Jersey, around New York and even

among the Boston growers. I believe the grower who takes advantage of this grade of coal as he can get it will be playing on the safe side.

One big coal firm in Philadelphia connected with big corporations makes the statement that 90 per cent of all the available bituminous supply in sight or in prospect has been contracted for by large manufacturing concerns, railroads, lighting plants and similar plants, which leaves only that small uncertain 10 per cent for the smaller fellows to depend upon. Matters may change decidedly but it would seem to me to be a very good gamble to take what you can get from week to week, for so far there is nothing in prospect as a relief.

Mr. A. F. Faulkner and daughter of New York were recent Boston visitors.

THE MARKET.

Practically speaking, there is no market. This applies to all of the large cities. Any dealer who comes in and wants flowers can get them at practically his own price. The amount of stock sent in is small and includes considerable outdoor stock. The flower in Boston that seems to be selling best just now is delphinium. *Lilium speciosum* has just appeared, but the call for them is not great as yet.

LADIES' SOCIETY OF AMERICAN FLORISTS.

Committees for the annual convention to be held in Cleveland August 17-20 have been appointed by the President, Mrs. B. Hammond Tracy, as follows:

Introduction Committee. Mrs. Chas. Maynard, Mrs. J. A. Peterson, Mrs. A. Austin, Mrs. Ella G. Wilson, Mrs. Whitton.

Entertainment Committee. Mrs. Charles Graham, Mrs. Albert M. Herr, Mrs. Philip Foley.

Welfare Committee and information Committee. Mrs. H. Knoble, Mrs. George, Miss Ida Peterson, Mrs. Friedlay, Mrs. A. L. Miller.

Miss Perle B. Fulmer proposes the following amendment to the Constitution and By-Laws: Article 6, Section 4, relative to the duties of the Treasurer, "She shall turn over to her duly elected successor all moneys, books, and papers, so that they shall reach her by January first."

Mrs. Albert M. Herr proposes an amendment to Article 6, to become Section 6 of the same, relative to Duties of Directors. "They shall meet at the call of the President as soon as convenient after the appointment of the new members, and elect their

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00
PRINCESS OF WALES..	10.00	95.00

MRS. ALBERT M. HERR, Secy.

AMERICAN ROSE SOCIETY.

Report of the Meeting Held at the
Minneapolis Municipal Rose
Garden, June 28.

This meeting was first scheduled to take place July 3, but on account of unusually warm weather and favorable growing conditions the meeting had to be called a week earlier, to see the garden at its best. This change unfortunately prevented the expected attendance of President Robert Pyle of the American Rose Society, Horace McFarland and other prominent outdoor Rosarians. The society was, however, represented by Messrs. O. Y. J. Olson of St. Paul and Hugh Will and Theodore Wirth of Minneapolis. Max Kaiser, President of the Minnesota State Florists' Association, called a field day meeting of the association which was well attended in spite of the unfavorable weather. A heavy rainfall interrupted the meeting which was adjourned to the nearby Park board greenhouses. After an hour session under cover, the visitors returned to the garden and inspected the 200 varieties.

One of the novelties which attracted attention was the W. R. Grootendorst, introduced by A. N. Pierson of Cromwell, Conn. The plants were received this spring and were in a very promising condition. If Grootendorst is as hardy as claimed by Cromwell Gardens, it will be a valuable addition to the H. R. collection of the garden.

Mr. Wirth expressed his disappointment over the limited number of plants received for testing purposes from growers and introducers of new roses. The following growers responded to his request for test plants:

A. N. Pierson sent: Columbia, Milady, Pilgrim, Premier, Evelyn, Crusader, Mrs. J. Cook.

Charles H. Totty Co., Madison, N. Y.; Madame Butterfly, Frank M. Dunlop.

Robert Scott & Son, Sharon Hill, Cornelia.

All of these plants were in good con-

dition, but cannot be judged as to their hardiness and other qualifications to this climate before next year.

While the garden as a whole was a beautiful sight to behold, it was not in the usual good condition of former years. The severe winter was the cause of the loss of some 375 plants which made many of the beds incomplete. On June 26 and 27 we had very heavy rainfalls, regular cloud bursts, and all fully developed flowers were completely spoiled. There were, however, an abundance of buds in evidence, which under more favorable weather conditions promise a good crop of flowers of practically all the 200 varieties during the next two or three weeks.

Mr. Wirth asks the writer to invite all growers, originators and introducers of new roses to apply for space in the garden for their novelties. He is willing to give them the space and to pay the market price for the plants. He wants four plants of each variety to be tested.

The Municipal Rose Garden at Lyndale Park is one of the show places of our city and through its influence rose culture has been stimulated all over the Northwest to a most remarkable extent. The Garden is surely worthy of the attention and support of every grower of the country. These Municipal Rose Gardens are the best possible medium for introducing new varieties, why not make use of them?

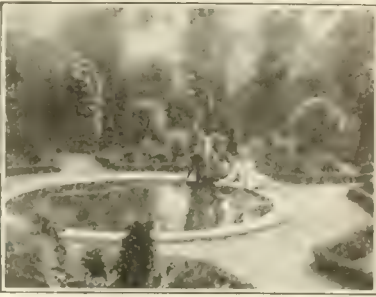

FREDERICK PERL

NEW YORK PARTY FOR S. A. F.
AND O. H. CONVENTION

Why wait on that reservation? All arrangements have been made in anticipation of your going.

Any number of men you know will make up the New York party, men you will enjoy traveling with. Then, at Cleveland, will be waiting many with whom it will pay you to exchange ideas. The various meetings as well will develop important discussions.

On top of all this is the promise of

BOX-BARBERRY BORDERED

The publicity campaign of the S. A. F. is suffering for the lack of funds. So serious is the situation that Mr. Henry Penn, chairman of the committee, has written an open letter which he desires to have published. We are giving the letter more than usual publicity because of its importance. It follows:

"Have the Florists had enough of the national campaign?

"Have we had so little success with our national publicity as to cause those who have as yet not contributed to feel that it is unnecessary to continue longer?

"Have we had lack of efficiency in our publicity committee to continue?

"Have we had too little results to prove the need of furthering our campaign?

"Have the florists had too little or too much business since the campaign was inaugurated?

"Are we going to continue or discontinue this part of the work only just budding out and only just beginning to prove itself?

"These are just a few of the questions that come into the minds of those who are interested in the work.

"Perhaps a little judgment on the part of those who show indifference to the work might assist those who have already contributed and who have been interested since its inception, and might solve our problem.

"What's the answer?"

HENRY PENN.

Apparently the labor situation is easing up a bit. This is the result of closing or partly shutting down of the larger industrial establishments. After all though, this isn't a great help to the florist or grower because most of the men who apply for work are wholly inexperienced. A few of the older hands are coming back, but relief is not so great as might be wished, although the situation is tempered by the fact that lack of coal may necessarily

cause a curtailment of greenhouse work all along the line. It is the farmers who benefit most by the change in conditions, but unfortunately they had already made their season's plans so that much of the labor which presents itself to them is turned away. Altogether, the outlook is for an abundance of help by next year.

It is expected that the gladiolus exhibition to be held in Horticultural Hall Boston, August 14 and 15 will be a very important one and that it will be attended by a large number of growers from all parts of the country. It is the date of the annual exhibit of the Massachusetts Horticultural Society, but in connection with it will be held the annual show of the American Gladiolus Society and the first annual exhibit of the Massachusetts Gladiolus Society. In times past, the American Gladiolus Society has held its show in connection with the S. A. F. convention, but it was decided to make a change this year with the result that gladiolus growers and amateurs fond of this flower will flock to Boston. The prizes which are being offered are most attractive and should prove a strong incentive if such an incentive is needed to the staging of exhibits on a large scale.

Florists who have been adding to their real estate holdings or to the equipment of their establishments should consider the matter of insurance. All too often even good business men neglect to increase their insurance to cover the additional value resulting from improvements. As far as that goes, however, the matter of increased insurance deserves attention even from florists who have done nothing to add to the value of their property, because the inflation which has come all along the line during the past year must necessarily have increased the replacement value to a very large extent. That is to say, if the property should be destroyed by fire it would be impossible to replace it at anything like the cost which would have been sufficient a few years ago. It is obvious, therefore, that if the insurance has not been increased to meet this situation the florist who suffers by fire will find himself in a bad way. The change has come about so gradually, too, and in such an unusual way, that a great many business men have given but little thought to the situation which they would be in if a disastrous conflagration should overtake them or any other physical disaster affect their business.

It is quite possible, and in fact very probable, that values will go down again within a few years, but in the meantime it is very important that the business man should anticipate possible losses from fire. For that reason he will be very wise if he takes out additional insurance to cover the estimated increase in the value of his property and equipment. He need not necessarily make this insurance for a long term, but it will be good business to protect himself in this way until conditions change again, when if he finds he is over insured he can readily make a new adjustment. In fact it is quite probable that the insurance company will take some action along this line if property values go back to their old level. The florist's business is to look out for himself, with conditions as they are today.

THE PERPETUAL CARNATION.

It is very interesting to get the English point of view on the carnation as a popular flower. The Carnation Year Book published by the British Carnation Society has just come to hand and contains the following from the pen of Lawrence J. Cook:

"Know thyself,

And to thine own self be true—
Thou canst not then be false to any man."

And when we know ourselves let us try and know the plant in which we are so interested.

The Conference on Carnations, held on March 10, 1920, suggested that many of us have much to learn about the Perpetual Carnation. When we know it, the pleasure of growing it will be greatly increased.

Just as the perfect man is a combination of brute beast animal, and spirit, and his perfection depends on the ratio in which the latter predominates over the former, so in a like way the perfect Perpetual Carnation is a combination of qualities the principal of which are beauty of form, color, and perfume, always combined with a perpetual growing and free flowering habit.

Raisers of the old border carnation have been the means of creating a flower of beautiful form and color, but often without perfume, no longer always hardy, and flowering at one short period of the year. They have produced a "Whited Sepulchre."

American raisers have studied size of flower, and to their own crude idea, color, but chiefly habit of plant has been their aim and success. They are fast losing the delicious old clove perfume which one would expect from the descendants of the Gilliflower.

The British raisers have a big task in gathering up the threads that have been dropped, that of habit of plant by the early British raisers, and combining them with the color and perfume nearly lost to us by American raisers. Is it an impossibility?

The British Carnation Society has evolved its name from the Winter Flowering Carnation Society and Perpetual Flowering Carnation Society, because its members consider that we have reached a point in its history when all forms of carnations might be embraced. The writer was the only member of the Society's Executive who opposed the last change of name, because he believes that it is dangerous to compromise.

PETER H. LANE, M. D.

We regret to announce the sudden passing away July 7th of Dr. Lane who was widely known in horticultural circles as well as in the medical profession. He attended nearly all the S. A. F. conventions during the past fifteen years; was an ardent enthusiast in the Pennsylvania Horticultural society; the Florists Club of Philadelphia; made trips to Barnegat, the West Indies, and other places with congenial spirits like Craig, Westcott, Asmus, and other old timers. He was a most genial, companionable gentleman, highly trained in botanical knowledge and a man whom everybody was proud to know. In his own profession he was a specialist in nervous and mental diseases, and was proprietor and manager of the Kenwood Sanitarium at Chestnut Hill, Philadelphia, which he founded about 16 years ago. He was 45 years of age, and in his boyhood days

he ran around Nahant and played pranks on Tom Roland the noted flower grower there who knew and loved him when but knee high. Later he was a Dartmouth student from which he graduated. He also took the medical course at Harvard; and at the Medico-Chi in Philadelphia. The cause of his death was pneumonia. Interment took place at Lexington, Kentucky in the family burying ground of his wife, who survives him and was co-manager of the Sanitarium with her husband—she also being highly trained in the profession. The doctor was a keen sportsman and took many trips to the backwoods. He was known to his cronies in the familiar moments when dignity and business was laid aside by the loving title of "Moosehead Pete" and he did not resent these pleasantries but always gave in return as good as he got. We will all miss him.

Flowers Under Glass

In a rainy season like the one we have been having it is especially important to keep the carnation fields cultivated. At the same time it is a mistake to work the soil while it is wet. As soon as it dries out you should get busy so that the surface soil will be cultivated in order to prevent the escape of moisture from the ground below. Nobody ventures to say that good cultivation is a successful substitute for the Skinner Irrigation System, but at the same time it does much to keep the roots moist and the plants growing. Pinch back the stems which begin to run up so that when benching time arrives you will have plants which have shoots in all stages of growth. That will mean, of course, a steady crop of blooms next winter. It is really a saving in time and effort to go over the field frequently, as then you can top each shoot just when it is ready instead of being necessary to take off ten day's or two weeks' growth which the plants ought not to have made.

Be sure that the cyclamen plants do not get hard or pot bound nor crowded at this time. Your work now will have much to do with the condition of the plants when they are ready for the Thanksgiving and Christmas trade. Spray the plants every bright day and use a nicotine preparation at least once a week in order to overcome thrips, aphids and mites. It is important to keep the house well ventilated and the use of movable shades is advocated. They are really a great help in keeping the plants from becoming drawn. If you happen to have a greenhouse bench where the plants can be protected from the hot sun, you will find that a good place for them. Perhaps you can plunge the pots in such a bench. You will find the location ideal under such circumstances, and the plants will grow as well as in cold frames, although possibly they may not become quite so stocky. For the last potting use soil which is two parts fibrous loam, one part dried cow manure, and one part leaf mold which is not too far decayed. Also add some sharp sand and a little fine charcoal. It is needless to say that good drainage is required when growing cyclamens.

This is a good time to put in seed of stocks for next winter's flowering.

Member Florists' Telegraph Delivery

DENVER, COLORADO

There are several good varieties, including Mont Blanc, which is an excellent white stock, Queen Alexandra, delicate lilac, Empress Elizabeth, deep rose, and Beauty of Nice, pink. Then, of course, there is the old-fashioned Cut-and-Come Again, which is a white variety not to be overlooked. When you have seedlings large enough to handle readily, pot them up single and keep them coming along in a cool house. You may have to get them into three and one-half-inch pots before you are ready to plant them out on the benches, which will be when the early chrysanthemums come out. If you want to have a large percentage of double flowers, wait until the flower buds show.

CORNELL ROSE TEST GARDEN.

The American Rose Society Pilgrimage which was Held June 30.

A large number of the members of the Rose Societies of Auburn, Rochester and Syracuse motored to Ithaca, June 30, to inspect the roses in the test garden of the American Rose Society on the grounds of the Department of Floriculture of Cornell University. The roses were in splendid condition and the visitors expressed themselves as highly pleased with their trip. After lunch at the Home Economics Building the visiting rosarians proceeded to the garden where they gathered under the shade of a large tree while Professor A. E. White delivered a short address welcoming the visitors to Ithaca and telling them of the work of the other test gardens of the American Rose Society. He was followed by Dr. A. C. Beal who spoke on the classification of roses and the special work of the Cornell test garden. Mr. Hubbard described the methods of winter protection employed in the garden. Dr. A. C. Fraser demonstrated the method of preparing the flowers and applying the pollen in pollinating roses. The visitors spent the afternoon inspecting the various species and varieties that were in bloom. At the field office punch was served by the feminine members of the staff and the wives of the professors.

The rose pilgrimage was held on the first of the three days of the first Summer Farmers' Week of the College of Agriculture which brought thousands of country people to Ithaca to view the experimental plots of the College and Experiment Station. Large numbers of these visited the Rose Garden, and also the Peony Plantation, as the flowers in the latter were in splendid condition this year because of the late season. In this manner a foundation was laid for an ever increasing interest in the outdoor flower trails of the department. Most of the farmers who visited the gardens had never seen the Rose Garden and did not know that anything like it was carried on in Central New York. Next year many others will motor through the beautiful Finger Lakes Country on their annual pilgrimage to the prettiest spot in all this favored land of natural beauty—the Rose Garden.

1910) velvety crimson-red, exceptionally fine, hardy rose.

Red Letter Day (A. Dickson, 1914) unusually vigorous, tall growing, semi-double, brilliant scarlet-crimson. Its cactus-like flowers retain the pleasing color under all conditions. K of K is said to be an improvement on this but thus far we fail to see it and instead K of K lack vigor.

Chrisie MacKellar (A. Dickson, 1913) a bedding rose of rare merit. Very free and continuous bloomer. Has pointed buds of orange and crimson, and semi-double flowers of a beautiful orange-pink.

Duchess of Sutherland (A. Dickson, 1912) among the light pink double roses the merits of this variety appear to have been overlooked. Two lots of plants in different beds show the same valuable qualities. A warm rose pink.

Gladys Holland (McGredy, 1917) a salmon-pink of very large size, good

form some flowers being seven inches in diameter. A good grower.

Mme. Hector Leuillot (Pernet-Ducher, 1904) This is usually classed as a climbing H. T. but like many others of that class it is not so vigorous that it cannot be used for bedding. A very large deep salmon-yellow.

Ulster Gem (H. Dickson, 1916) A large primrose-yellow single hybrid tea rose with prominent deep yellow anthers. A worthy companion of Simplicity which has always been the best white single H. T. in the garden. Isabel continues to lead the pink singles.

Golden Spray (H. Dickson, 1917) This promises to be the one best of the new yellows.

Willowmere (Pernet-Ducher, 1913) This variety continues to lead the salmon-pink roses of its class.

Danea (Pemberton, 1913) This hybrid musk rose, deserves to be more generally known. It is an unusually

free bloomer and continues on the strong shoots sent up from the base. The buds are rich yellow but the flowers are a cream white. Although a semi-climber this appears to best advantage as a bedding rose.

Among the polyanthas, or baby ramblers White Baby Tausendschon and Baby Elegance are two that are worthy of a place in any garden.

Not many of the climbers were in bloom but among the early bloomers were noted the following:

Paul's Scarlet Climber (W. Paul, 1916) This rose wherever we have observed it has been in splendid condition this year. At Ithaca its merits have been verified in other seasons. Its glorious color and long keeping qualities while on the plant are two of its merits.

Aviator Bleriot (Fauque, 1910) This rose in bud, or flower is a decided attraction to a garden. Its beautiful orange and yellow buds are very beautiful.

Rugosa repens alba (Paul, 1900) A pure white flowered hybrid rugosa with very free blooming qualities and a trailing habit. For covering banks or boulders this rose deserves to be better known as it remains a long time in bloom and is much earlier than Rosa Wichuraiana.

Seashell (Dawson, 1916) A large, beautiful, single, pink variety.

Purity, Christine Wright and Climbing American Beauty were magnificent pillars of bloom where grown on posts. These three are indispensable.

The display of climbers will continue until the 20th or 25th of July.

A. C. BEAL.

COMING GLADIOLUS SHOW

The schedule of the first annual exhibition of the Massachusetts Gladiolus Society has just been issued. This show will be held in connection with the exhibition of the Mass. Hort. Society on August 14 and 15, Saturday and Sunday, and it is expected to attract a large amount of attention. A liberal prize list has been prepared and classes arranged so as to give everybody a fair chance. There is a long list of prizes open to all, including eleven offered by Chas. W. Fairbanks of Lexington, many specials, which classes are also open to florists, and classes for amateur and private gardeners, including several specials offered through the Mass. Hort. Society by Miss Case of Hillcrest Farm, Jelle Roos of Concord and others. Copies of the schedule may be obtained from Robert R. Walker, Secretary, Mansfield, Mass.

Little Talks on Advertising

I have been much interested in an advertisement being put out by the concern in Mt. Vernon, N. Y., which styles itself "The House of Flowers." It uses part of a column in a local paper to give helpful hints for the benefit of its customers. At the head of the advertisement is a very attractive drawing of an idealistic flower bowl arrangement. Below is the advertising matter, as follows:

Making the Most of Cut Flowers

Start right by purchasing freshly cut blooms. Fill the vases within an inch of the top with fresh, cold water. Remove a small portion of the stems with a sharp knife and set up each stem one by one. Do not crowd, aim at showing off each individual flower. Deep vases should first be loosely packed with rush grass to prevent smooth-stemmed flowers falling out of position.

Stand the vases in a cool position out of direct drafts and hot sunshine. Change the water daily, cutting off a small portion of the stems when doing so.

House of Flowers

Phone 116 Mount Vernon.
Proctor Building

A great deal of good advertising can be done in the form of helpful hints like this. The readers of the paper will naturally assume that the advertiser who puts out copy of this kind will be glad to be of assistance in any other way. It helps to establish a feeling of confidence which is a real asset. Comparatively few florists appreciate this phase of advertising, but it is well worth considering, although, of course, not to be carried too far. There are times and occasions when it is imperative to set forth the specific articles which are for sale, with the price, as has often been stated in these articles, but for a dull season when the chief aim is to keep the name of the advertisers before the public, copy like this is to be highly considered.

Several changes are being made in the store of C. B. Thompson Co. of Louisville, Ky. Especially noticeable improvements are the new windows which have been added.

Mr. John Klaus, a well known greenhouse man at Greenwood, Mo., was recently married to Miss Wally Bauer.

It is understood that the Cottage Gardens Flower Co., of Eureka, Cal., has been purchased by Mr. P. F. Rosalia.

The Lord & Burnham Co. have completed a new greenhouse for W. W. Walker, at St. Catharines, Ont., and the house has been filled with 5,000 carnations and 5,000 chrysanthemums.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

The unusual season has been as troublesome to the rose grower as to the peony grower, and has interfered greatly with the success of both the shows and the rose field days. It seems especially unfortunate that the flowers were not further along when the rose growers gathered at Hartford for the feast of bloom always to be found there. Still there is one consolation. The display at the rose gardens is not confined to one or two days, as is that of the shows, so that rosarians who are sufficiently enthusiastic to make a second pilgrimage can enjoy the exhibit. And certainly the Hartford garden is well worth seeing, not only because of the innumerable varieties shown, but also for the excellent arrangement. It is not surprising, in view of the success achieved by the garden at Hartford, that other nearby cities should become imbued with the hope of securing a similar show place for themselves.

The New Haven Horticultural Society is actively putting forth a proposition looking to the establishment of a rose garden in that city, both as a business advantage and a contribution to the city's attractive appearance. The society has some figures which perhaps will be interesting to other cities where similar projects are being contemplated. It is found, for example, that only \$2,000 was spent in starting the garden at Elizabeth Park, in Hartford, which was the first public rose garden in the country. The date was 1904. Account was kept of the visitors to this garden, and it appears that over 800,000 people have entered its gates since they first opened. In one year 116,000 visitors were registered. On two so-called Rose Sundays one-tenth of the automobiles bore other than Connecticut markers, and 10,000 people from out of the state were attracted to Hartford.

It is considered that \$3,000 would be enough to begin a rose garden of fair proportion in New Haven, and that this money would soon come back to the city as a result of the visits from out-of-town people. Certainly a municipal rose garden properly cared for is an excellent piece of advertising for any city. The very fact that roses are associated with a town does much to give it standing in the public estimation. The city of Portland, Oregon, is a good example of this truth. Portland has won for itself the name of

the City of Roses and such a name inevitably carries a pleasing impression.

It seems to me that the Foxgloves have bloomed unusually well this season. In some of the gardens around Boston they are now a source of great delight. I sometimes think that the average amateur does not make sufficient use of the *Digitalis*, for one reason or another. It is a very stately plant and with the exception of Larkspur nothing makes a finer show in

the perennial border. Although called old fashioned, they fit in with almost any landscape scheme, and their wholesome, clean appearance recommends them.

It is difficult to explain why the name Foxglove was ever given to this plant, for it takes a very long stretch of the imagination to conceive of fox's wearing gloves, in any case, and even if they did, of utilizing anything so small. Some people, in fact, think that the name has no reference to the fox in truth, but is really a corruption of folk, having in mind the fairies or "Little Folk," as they are often called.

In case you have a shady corner in your garden where it is difficult to get most plants to grow, try planting a clump of Foxgloves there.

AS MR. ENGELMAN SEES US

British Carnation Grower Writes About Conditions in the United States

The many florists in this country who were so fortunate as to meet Mr. C. Engelmann, the famous carnation grower of Saffron Walden, England, on the occasion of his recent visit to the United States will naturally be very much interested to see what he has to say about conditions which he found here and about the people in the trade with whom he came in contact. The following articles from the current issue of the Carnation Year Book issued by the British Carnation Society is therefore published in full:

It is well known that the true Perpetual Flowering Carnations were introduced into this country from the United States, and from here found their way to the rest of Europe and many other parts of the world.

It must be 16 years ago, when I saw the glorious "Enchantress" exhibited by Mr. Dutton at the old Temple Show, and fell in love with it at first sight. Many British growers have since taken up the cultivation of the American Carnation, and dozens, aye, hundreds of British-raised varieties have been introduced, many of these, according to the raiser, are far superior to "Enchantress." Where are they all today? Well—De mortuis nil nisi bonum, so let them rest in peace. The sad fact is

that even now, probably 75 per cent of all the carnation blooms we see in the florists' shops, or in the flower markets of this country are still American varieties. However, there is another and more pleasing aspect, namely, 75 per cent or more of the plants we meet with in private gardens are of British origin. The reason for this state of affairs is this: The American raiser caters solely for the commercial grower, the British raiser mainly for the private grower.

The American raiser will often sell as many as 100,000 plants of a novelty which has caught on during the first season, whereas the British raiser may not sell 1,000 in the same period. The American novelty is, consequently, rarely placed on the market until about the fifth or sixth year after the first plant of the new variety was raised from seed, while British varieties have even been sent forth to charm, or otherwise, the buying public, during the second year of their existence.

The natural consequence of all this—and we on this side may just as well confess it—is, the American raised novelties have, on the whole, up to now, been less disappointing than the British ones. I do not for one moment believe that raisers on this side have ever placed anything on the market which they considered inferior to existing varieties, but I am certain

that it is impossible to judge a variety sufficiently to justify its being disseminated before it has been at least three or four seasons in the raiser's hands. Even after that it will frequently prove disappointing, as I have discovered more than once to my cost.

Another point in favor of the principal American raisers is the long experience they have had in the art of hybridising. Mr. Dorner told the writer that he, and his father before him, had been raising carnation novelties for 32 years, and a careful record has been kept of all the crosses. It is no wonder then that some of their latest productions have considerably raised the standard. It is the opinion of the majority of the carnation growers in the U. S. A. that their new variety "Laddie," with blooms up to four and one-half inches in diameter, and stems up to three feet long, has opened a new era in the carnation world. Certainly nothing has been put into commerce to approach this grand variety since "Enchantress" made its appearance. I have seen others of this "Laddie" type which are coming along, and which are destined speedily to find a place in the sun.

The method of growing carnations is

practically the same with all our American friends, whether they are private or commercial growers. Pot culture is non-existent, at least, I have never seen a carnation in anything larger than a two-inch pot on the other side of the Atlantic. The cuttings are rooted from December to February: now and then a grower may commence earlier or keep on later. As soon as rooted the cuttings are transferred to two-inch pots or boxes or benches. The earlier rooted carnations are again transplanted into benches or boxes. As soon as the weather permits, which, according to the latitude, may be anywhere from April 1 to May 15, the carnations are planted out into the open. Here they are well cultivated and frequently hoed. Watering, however, is avoided unless the season is extraordinarily dry. The plants are kept well pinched, and by the time they are planted into the houses, which is from about July 1 to August 1, large bushy plants with 20 and more breaks are produced in a favorable season. A carnation will break more freely when planted out in the open than it does when grown under glass.

A very limited number of growers cultivate their plants entirely under glass, that is, they plant them into their permanent quarters as early as May. The one advantage of this method is a high grade flower with a long stem can be produced early in the season, whereas the first blooms of the field grown plants are generally rather inferior and short stemmed. In the houses the majority of the carnations are planted on raised benches about three feet high, in four to five inches of rich soil, which latter is prepared during the preceding winter and spring, and frequently contains as much as one-fifth part of well rotted manure. A few growers construct their benches on the ground, the bottom of these is formed by a layer of square drain pipes or hollow bricks. Here and there one also finds the carnations grown on well drained solid beds with sides about 12 inches high.

The distance between the plants is mostly eight inches by ten inches with a few variations according to variety. The carnations are generally supported by one wire ring, and series of wires stretched above them lengthways and string cross-ways. Little or no artificial manure is given before January, from then onward most growers start with small doses, and these are increased and applied more frequently as the spring advances.

Plants are grown during one season only under glass with the occasional exception of new and valuable varie-

HENRY A. DREER, Seeds, Plants, Bulbs and Supplies, 714-716 Chestnut St., Philadelphia, Pa.

ties, these are sometimes cut back and kept for the production of cuttings during a second winter.

Before the replanting begins in July all the old soil is removed and fresh soil put into the benches. This, with an outside temperature frequently as much as 90 degrees in the shade, is far from being the most fascinating job in carnation culture, and I have often wondered why in this age of mechanical power, and in the country with the most advanced labor-saving appliances, nothing more wonderful than a wheelbarrow is used in the operation.

The temperature is kept as even as the outside atmospheric conditions will allow, and it seldom varies more than two degrees throughout the winter nights. Most growers favor a night temperature of 48 to 50 degrees during the duldest month and 50 to 52 degrees

during the rest of the winter. By far the most young stock is sold as rooted cuttings direct out of the sand, very few plants change hands from two-inch pots. From July to September quite a considerable trade is done with larger plants lifted from the field.

The labor and coal shortage during 1917 and 1918 checked the carnation industry very considerably, and many carnation houses were either entirely closed down or used for production of other crops, which at that time appeared more necessary or profitable. This temporary set-back is, however, being speedily overcome, and with the introduction and increase of varieties of the "Laddie" type of carnation will soon occupy a higher position among the popular flowers of the United States than it has ever done before.

Farragut**FOXGLOVES**

When we were in Brittany we saw the pink foxgloves growing by the sides of the road as butter-and-eggs and dogbane grow with us.

A year ago in April we planted three hundred foxgloves in our woods. They have not all lived through the winter, but many of them are now in blossom under our pine trees, where they have a beautiful setting. They also come after the moccasin flowers and violets have passed and before the loosestrife, pyrola and pipsisserva have blossomed. There is something about the unexpected blossoming of flowers in the woods which is very beautiful. It is the contrast of color with the trees, the beauty of light and shade reminding us of that fine old saying—"Life has many shadows but the sunshine makes them." Or is it that the flowers which belong in the woods, seem to have a joy of growing there, a fresh delightful spontaneity of growth which we lose in our more formally planted gardens?

We were lately made very happy at Hillcrest by being congratulated by a connoisseur in gardens on the beauty of our wild planting. Fortunately dear old Dame Nature has scattered her flowers all through our woods, we are only adding foxgloves, iris and a few other flowers to their charms while she stands by warning us to plant no flowers in her woods which do not by right belong there and all phlox and hollyhocks are very beautiful but they do not belong in the woods.

M. R. CASE.

Hillcrest Gardens, July 7th, 1920.

NEW CANNAS.

Public notice is hereby given that the Conard & Jones Company, West Grove, Pa., submits for registration the new cannas here mentioned:

Statue of Liberty: Parentage, Maid of Orleans × Orchid flowering variety. Height 6 to 7 feet, foliage bronze, leaves half as large again as its nearest rival, and of a rich, luxuriant, ebony shade, flower of orchid type, blazing flame-red in color. The flowers are of large size and good form. The effect is massive and impressive.

Candelabra: Parentage, Firebird seedling × seedling. Height 5 feet, five to seven flower branches on each stock at one time is the average made on stock produced in originator's nurseries this year, and every single branch ablaze with a torch-like flame of fiery orange-scarlet bloom. The branches are erect and sturdy; the foliage is rich green, and very vigorous.

American Beauty: Parentage, Firebird seedling × Olympic. Height 5

Be sure and get Meyer Threads and take no other.

LEMON OIL COMPANY

Dept. S. 420 W. Lexington St., Baltimore, Md.

in which Hawthorns in this climate cannot furnish either flowers or fruit. In the tropics some trees produce flowers almost continuously during the year, but in cold countries like New England no other group of plants has such a long season of flowers except the Viburnums, and none of the Viburnums retain their fruit into the winter.

When in bloom some of the American Hawthorns are objects of great beauty, and only the fruit of some Crabapples is more conspicuous than that of the large-fruited Hawthorns. As they grow naturally over a large part of Eastern North America and more sparingly in the West there are few parts of this country or Canada where some of the species cannot be successfully grown. All the Thorns thrive in cultivation and respond to a generous treatment with larger size, more tree-like habit and handsomer foliage and fruit.

Crataegus Phænopyrum, which appears at the head of this paragraph, the Washington Thorn, cultivated perhaps more frequently 75 years ago than at present, is a slender tree growing under favorable conditions to a height of 25 or 30 feet; the leaves are nearly triangular in shape, not more than two inches long and an inch and a half wide, and are dull green; in the autumn they turn bright scarlet. The flowers are creamy white, smaller than those of most Hawthorns, and are arranged in small compact clusters. Few if any of the American species have less attractive flowers. The fruit, too, is small, barely more than a quarter of liberal response to this appeal now, when we are compelled just to mark time, but with confidence that the trade will make an immediate advance possible, and, necessarily, profitable. an inch in diameter; and the Washington Thorn owes its value as a garden plant to the brilliancy of its autumn foliage and to the beauty of its abundant fruits long persistent on the branches.

In earlier days of American gardens Crataegus Phænopyrum was much used as a hedge plant.

feet. Velvety oriental carmine or translucent cerise; soft green foliage. Practically every stalk produces two heads of bloom, and some four.

Any person objecting to these registrations, or to the use of the proposed names, is requested to communicate with the Secretary at once. Failing to receive objection to the registrations, the same will be made three weeks from this date.

JOHN YOUNG, Secy.

ARNOLD ARBORETUM NOTES.

Crataegus Phænopyrum or Cordata is in flower this week. Hawthorns begin to flower in the Arboretum before the first of May and they have been flowering here almost continuously ever since. In a month some of the species will begin to ripen their fruit, and on others fruit little shrivelled or discolored by the winter will still be on the branches in April. There are not therefore many weeks in the year

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orcharde; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

National Publicity Campaign

Referring to the rather apathetic spirit shown toward the Campaign by a rather large number of florists throughout the country, Joseph Kohout, of Libertyville, Ill., expresses his sympathy with the Publicity Committee on account of the slow response of the craft to appeals for just contributions to the Campaign Fund, as follows:—"They have my sympathy, and admiration at the same time for sticking to such a thankless job—but for goodness sake, don't give up the ship, we shall all need that publicity in the very near future."

Mr. Kohout is right. We shall most certainly need all the publicity we can get in the near future. We need it now. We need it to keep in effect the great benefit we have derived from our work of the past two years and more. The result we have accomplished cannot stand for permanence unless kept continually freshened by further effort. We all of us have surely in mind a few of the great advertising campaigns in recent years, which, with the commodities advertised, are now mere memories. Their great results petered out because having been obtained it was thought they would stand unsupported.

Were we to cease in our efforts to keep "Say it with Flowers" before the public, the slogan would quickly be forgotten. We should be unjust to ourselves if such a thing should happen. The impression we have made already is worth considerably more than a few paltry dollars to every florist in the land. A florist cheerfully pays his insurance bills to protect him against losses by fire or other destructive agent, and when he contributes to our Campaign Fund, he should feel that he is protecting his business against dry rot—which he really is, with the cooperation of the best of his brother florists.

Our Committee will meet in Cleveland next month, during the Convention of our Society, and a session of the Convention will be set apart mainly for the discussion of matters in connection with the Campaign. Is your name on the list of contributors to be presented at that meeting? If not, don't you think it ought to be? Why not help to make the "thankless job" Mr. Kohout refers to one of pleasure? The Committee does not mind the work, or the responsibility

of the Campaign, but appreciation of their labors shown in a better response to their appeals for funds would be sweet indeed to them. It is not believed that a cooperative publicity campaign for any product was ever promoted and carried on at an expense so small for the wonderful results obtained as our Campaign for publicity for flowers. Many leading experts in publicity are frank enough to tell us this, and to refer to it in public print. With further funds, we can obtain the maximum of our desires, and it is up to the trade to determine whether we shall reach this point or not. The only obstacle in the way is insufficiency of funds, and this is easily removed through a better support of our movement.

JOHN YOUNG, Secy.

43 West 18th Street, New York City.

THE SOCIETY AS A BUSINESS ORGANIZATION

Thirty-six years ago at this time a small group of pioneers in our industry were preparing to hold, in Cincinnati, the first convention of our Society. The convention was held in due course, and was well attended, although the membership during 1885 did not exceed 450. Today it is advancing rapidly toward the 4,000 mark.

But as an organization representing an industry of such magnitude as ours, we ought to be at least 5,000 strong, and even then we should embrace, perhaps, only a quarter of those engaged in the business. Of course, there are men in every profession who are so wrapped up in themselves that they will hold aloof from everything; let us look at them as something we do not want to be. Every "live" florist ought to be a member of the S. A. F. and O. H. The dues, \$5.00 per year, certainly entail no hardship, and it should be a pleasure to be able to pay them for a partnership in such an organization.

The Society has done lots of good, and prevented lots of harm. It is the "Spokesman" of the industry, and recognized as such, and its members share in the recognition. It should be a matter of pride with any florist to become a member. As President John Thorpe said in his address at the first convention, "Just think of an industry of such magnitude without a voice or a word in its own interest." That contingency is passed. We have a grand and glorious organization, whose voice is heard whenever there is occasion to lift it, and whose representative qualification is unquestioned.

There are none too big or too little to come into our Society. It really ought to be made one hundred per

BRECK & SONS OUTING

The annual outing of the Mutual Benefit Association of the employees of Joseph Breck & Sons Corporation of Boston was held last Saturday on the grounds of the Breck-Robinson Company at Lexington.

A baseball game between the men of the seed department of the firm and those employed at the nursery was the main feature of the outing.

The teams ran even until the fifth inning, when the seed men got two runs and held this lead for an inning. The following innings saw much batting and scoring, the nurserymen winning out by a score of 11 to 5.

A collation was served on the shores of the duck pond. The guests of the party were Charles H. Breck Jr., Charles H. Breck 3rd and Thomas J. Grey. A letter was read from Charles H. Breck senior member of the firm, who on account of illness could not be with the party. Alexander J. M. Joiner, president of the association, Miss Henrietta L. Riley, secretary, and Sheldon Robinson of the Breck-Robinson Company had the affair in charge.

George Watson's Corner

"You in your small corner and me in mine."

They say that Arthur Niessen read my story about the crow of Ancient Hindustan, and that he did not quite get the point that old Laghupatanaki, the crow was trying to inculcate to us two-legged creatures. And that he was still meditating on it one morning on a visit to Kennett square, that quiet and peaceful Quaker country—revered as the home of Bayard Taylor—when a dog rushed out and bit him on the leg. This brought him to earth in a hurry, and he then realized that Laghupatanaki was right about it and that us humans never can tell until after the event. Even the stupidity of the iris, which so worries Brother Sturtevant at times, can be explained if the ancient wisdom of Dhoorjatee, the god of prudence and policy, be wisely followed. For as Damanakka, the dog, said to his master, the lion: "It should not be suspected of one whose life has been spent in noble deeds that his reason is lost when he is only involved in trouble. A fire may be overturned, but its flame will never descend."

Now that we have a few leisure minutes from the rush of business in the flower market the boys have a chance to get together and have some fun. There was a lively ball game on the afternoon of the 16th between the boys of the Pennock Company market and a team composed of boys from other wholesale and retail establish-

ments. It was a good game while it lasted, but it had to be called in the fourth inning on account of rain. The score at that time stood 16-3 in favor of the Pennocks. The line-up was as follows:

John Habermehl is summering at the shore, his address being The Creston, Montpelier Ave., Atlantic City. He attends to business daily in Philadelphia, arriving every morning at eight o'clock. He was reported on the 13th inst. as on the sick list and confined to his room. We trust it is nothing serious.

William Moore, late with C. E. Meehan, succeeds Martin Gannon as manager of the Alfred M. Campbell store, 1512 Sansom street. Mr. Gannon is rumored to have taken over the Doyle retail store in Kensington.

Robert Craig has been under the weather the past few weeks and is taking things easy. He thinks Mr. Therkildson would make an excellent secretary of agriculture.

Our own opinion coincides with that idea but there are many among us who think that we ought to go even further and run him for president. The ticket which they suggest along

with Mr. Therkildson will no doubt meet with universal approval in trade circles.

Paul Huebner is a big mogul these days. Spends week ends on million-aire yachts around Barnegat and Atlantic City. Its a great thing to know men like Louis H. Eisenlohr, and the Wideners, and the Elkins, and people like that! Next year Paul says he will spend on the California Coast. It makes us common folks feel a little envious but there is one good thing about it—Paul deserves it all. He is one of Natures Noblemen.

NEW YORK TO CLEVELAND.

The transportation committee of the New York Florists' Club has sent us a copy of the booklet mailed out to club members and others as a means of gathering a representative party from New York and vicinity for the coming S. A. F. & O. H. Convention at Cleveland, August 17, 18 and 19. Particulars on how the party will travel and the prospects of both a profitable and enjoyable time for those who will make up the party have been set forth in a most inviting manner.

For the reason that it is impossible to make personal calls on all those who propose to attend the Convention, and a good sized party is expected, it is hoped that the invitation in the booklet will meet with a quick response.

The desire of the committee to know of your reservations as early as possible is necessary so that arrangements may be made with the Lackawanna Railroad for sufficient accommodation.

Reservations are to be sent to the secretary of the transportation committee, C. Lowther, Box 100 Times Square Station, New York City.

THE TALK OF THE TRADE

The prices which are being realized at present for giganteum lilies are not satisfactory to the grower and we can only hope for a change very soon for the better. Ten, twelve and fifteen cents per bloom will not pay a margin over the price which the growers have had to pay for their bulbs. Cold storage lilies now of 7-9 size will have to do well to average better than two flowers, and when the loss of poor bulbs and everything else which must be figured is taken out, there is a loss instead of a profit on the whole transaction. Retailers can well afford to pay a fair price for lilies. They fill up quickly in all work, make a good showing and are certainly away below their value when they are sold as low as twelve and fifteen cents.

Of course conditions in the market at present are not favorable to any crop, no matter what the quality may be, but it is a pity that such fine stock of salpiglossis for instance should go without buyers. I have seen beautiful stock in both the Boston and Philadelphia markets go at ridiculously low prices, and this of course applies to other annuals, but I was tempted to mention salpiglossis particularly as the quality has been above what I have seen in any other season. It is a flower which can be used nicely in many ways and is generally satisfactory.

I was sorry to see at the Budlong range that they are having trouble with what I call a rose beetle. I don't know the correct name but it causes a great deal of damage and is a serious proposition for anyone to overcome. I understand that this has shown up in various parts of the country, particularly in the Middle West and around Philadelphia. Spraying with various poisons seems to be the better way of checking it. On the Budlong place it has shown up only on one range which is well separated from all the others, and they hope to keep it

confined to this range until they can get it under control.

This insect has a habit of eating out the eyes, also working on the foliage. From investigations, they now think that it is the same as the strawberry beetle and they are experimenting with strawberry plants set at intervals through the houses, and results up to now are very encouraging. If they can trace it to this particular plant as its favorite food, the fight will be simplified. Rose growers will all watch with interest further results.

What is the matter with the sweet pea stock grown around Boston? Going through our markets you will find nothing but a lot of inferior quality. As I came through the markets this past week I don't remember seeing one lot of really good sweet peas. This was evidenced again at the Sweet Pea Show at Horticultural Hall, Boston, last Saturday and Sunday. Philadelphia came forward with some excellent stock. Such people as Burton and Burpee of Philadelphia and Mrs. Riddle of Glen Riddle, Pa., came into Boston with wonderfully good quality, and I can't understand why good stock can't be grown around here. We have had a cold, late, wet spring which we have always supposed would be just the very best growing conditions for sweet peas. I am sure I can't account for it.

Secretary John Watson

Just about a year ago at this time, William Sim of Cliftondale had his carnation houses planted and stock further advanced than any we knew of anywhere in the East. This year he is again well ahead with not more than two houses left to plant, and these will be finished inside of ten days. This represents a housing of 175,000 plants. The early-planted stock is well advanced, in fact some of them are now setting buds, and from one end to the other this place is in the pink of condition.

Mr. Sim's method of handling young stock from the potting bench to the planting time is worthy of every carnation grower's attention. A comparison of plants in the benches now handled under different methods is very interesting. Some stock was taken from the sand, placed in flats and from these planted into the field, while he has handled other blocks by taking right from the sand and planting into soil in beds and from there planting into the benches in the houses for winter flowering. There is no question at all from his experience and from what one may observe in these houses that the plants which have gone through this system of indoor culture are well in advance of those which were flatted and then placed in the field. Of course this is only advisable in a case where early planting is possible, but Mr. Sim believes thoroughly in early planting and results tend to prove that he is right.

It is also worthy of note that he uses a greater depth of soil than the average carnation grower; in many cases twelve inches, and he does not change this soil each year but takes out only enough to make room for well-rotted stable manure which is spaded in as thoroughly as possible.

Three seedlings have been under observation during the past season, namely Kiltie, Gay Gordon and Romeo; the first two variegated sorts and the latter about the shade of Mrs. C. W. Ward. The habit of growth is very vigorous, and a fair trial this year may result in one or more of these being put upon the market.

Pot plants for the coming winter at the Leominster Floral Co. are showing up in fine shape at this time. A fine

block of cyclamen are coming along and took the best of anything on this place, while a lot of Cincinnati and Melior begonias in 3½ inch pots are in fine shape. Plans are laid for a good supply of begonias, cyclamen, primula, cineraria, hydrangea and rambler roses. This range is located in a section of the country which is sure to be able to take good care of that trade which comes from the north and west of Boston. Their shipping conditions, are ideal, and Robert Edgar, the head of the firm, is a grower who can finish stock in just the right shape for commercial purposes.

While the annual convention of the Tennessee State Florists' Association was held away back in February, the printed proceedings have just come to hand, but one cannot read this book without being impressed with the wealth of good stuff that was handed out at that meeting. Take for instance the paper read by S. S. Skidelsky, "Our Credit System; its Uses and Abuses." This is full of good points and must be interesting to everyone in the trade. Mr. Skidelsky of course has been in a position for many years where he has been in close touch with the florists of all grades and conditions all over the country. Like many who are in a position to judge of credit conditions, he has found that there is a marked improvement. Terms of sale are more closely adhered to, and a more pleasant connection between buyer and seller is evident in all directions. Mr. Skidelsky says, "Credit is a privilege that is not to be despised by any business man, no matter how conservative in his enterprises or how determined to steer clear of debt." It is very evident that the seller and buyer have come to a much better understanding and a more solid basis of doing business. We quote Mr. Skidelsky's way of expressing that point, as follows: "If credit is a privilege, that privilege must not be abused."

Besides Mr. Skidelsky's paper, there were other very interesting ones, including the Florists' Business of Today, by George Asmus; Local Publicity, by Z. D. Blackistone; and two very interesting papers on Office Management and Collections by W. Cleveland Johnson and Robert E. Mapes of Knoxville. It is seldom that one can find more solid matter to think over put into two days than was given to the members at this convention. Such meetings tend strongly to benefit the trade in all directions, and the Southland is certainly not one bit behind any other part of the country; in fact, I believe that we can look to them for many good points.

When I read the article headed "The Perpetual Carnation" in HORTICULTURE of July 17th, and came to that paragraph which I quote, "American raisers have studied size of flower, and to their own crude idea, color, but chiefly habit of plant has been their aim and success. They are fast losing the delicious old clove perfume which one would expect from the descendants of the gilliflower," I stopped short and tried to see how this statement could be justified. The American raisers have studied the size of flower, but what does Mr. Cook mean by our "crude idea" of color, and how does it happen that Mr. Engelman, the famous carnation grower of Saffron Walden, England, says in his article in the same issue, "The sad fact is that even now, probably 75 per cent of all the carnation blooms we see in the florists' shops or in the flower markets of this country are still American varieties." It can't be possible that that is only because of habit of plant and size of flower. We know very well that the American hybridizers have studied habit of plant and have succeeded in improving it greatly, but is it true that we are "fast losing the delicious old clove perfume?" What about Matchless, Benora, in fact any number of our American varieties, and last, but a very important one, Laddie?

When Laddie was young and just coming on to the market in quantity, one heard occasionally the statement that it was a very shy bloomer and had no fragrance. It has been demonstrated that neither point is true. I remember well the last day of the carnation show in Chicago this past winter that Sam Goddard called the attention of several growers who were standing around the tables and admiring this wonderful carnation to the fragrance of Laddie. There were quite a number of vases that had been there from the beginning of the show, and those from Boston, Biddeford and Philadelphia had made long trips, but besides the wonderful keeping qualities, the fragrance was all that could be desired. No one can say that this wonderful carnation hasn't fragrance, and that holds true of any number of our leading commercial varieties.

Another variety that showed up fine at this show with plenty of fragrance was Morning Glow; in fact, the majority of our commercial varieties are rich with fragrance. Possibly these American varieties do not show up so strongly on this particular point when grown on the other side of the water, but our English friends must not think that we have forgotten fragrance and know nothing about color as we see it on this side.

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

MICHELL'S SEED HOUSE
516-518 Market Street Phila., Pa.

Edward Johnson, an aged florist, of 852 East 29th St., Brooklyn, N. Y. was recently badly beaten by a burglar who entered his house and whom he attempted to subdue with a rifle. Mrs. Johnson who sought to assist her husband, received a blow which fractured her skull, and caused her death.

RAISING FERNS FROM SPORES

Here and there one finds a grower who is an adept at raising ferns from spores and the following article from Gardening Illustrated, an English paper explains methods which are almost exactly those of the most successful grower in New England.

The most natural, as also the quickest, way of propagating ferns is by spores or seeds. These should be gathered when the capsules containing them begin to take on a brownish appearance. The fronds should then be cut, put into paper bags, and allowed to dry for two or three days, after which the spores should be sown as soon as possible, although most of the spores retain their vitality for a considerable time.

Although ferns may be sown at any season of the year, the early spring is the best, as, if properly treated, seedlings, or the generality of them, raised then, have sufficient time to produce crowns strong enough to stand the following winter. Many ingenious ways of sowing fern-spores have been recommended, but, provided the materials used be of pure quality, either a piece of turfy loam, a piece of fibrous peat, or sometimes a mixture of both, roughly broken, and perfectly free from decomposition of organic matter, is all that is required.

An excellent way of getting rid of vegetable or animal life in the material used for sowing consists in gently pouring the contents of a kettle of boiling water over it. When the soil thus treated has been allowed to cool and drain, it is ready for use, as eggs or larvae of insects, spores of fungi, etc., are, or should be, all destroyed.

The fern spores, which are exceedingly minute, must be scattered on the surface of the prepared soil and covered with either a bell-glass or a sheet of glass and kept in a close, shady place, under a handlight, if possible, but this is not absolutely necessary. There they should remain until the

surface of the pots or pans which contain them becomes covered with a growth of lichen or liverwort appearance. From this singular growth the young ferns ultimately develop, according to the different species, in a space of time usually varying from three to six months from the time of sowing.

During that time the pots or pans in which the spores are sown should be kept in a uniform state of moisture, the watering should be done by partial immersion by standing the pots or pans in water for a few inches, so that the moisture rises to the surface.

When fern-spores germinate freely it is necessary that they should be several times divided, for, if allowed to crowd and overgrow each other in the seed-pan or pot, they are very liable to damp off. They should still be watered by partial immersion, and no water should be applied overhead until they have produced fronds. They should be gradually inured to the air by tilting on one side the glass cover, which may in a short time be removed altogether. Until then it is best to keep the pots or pans at all times well shaded during sunshine, but not in dull weather.

When fronds have made their appearance the seedlings do not require any other shading than that to which the house is usually subjected. When the seedlings have formed a little crown, and are provided with two or three fronds, they should be potted singly or placed in pans or boxes and kept for a time in a somewhat close atmosphere, well shaded, and carefully watered until established.

GENERAL NEWS NOTES

It is not strange that growers find themselves somewhat agitated every time they see dark clouds rising in the sky indicating the possible approach of a hailstorm. A number of these storms have been experienced in different parts of the country the past week, one of them having swept over New England. This particular storm traveled along a very narrow path but left destruction wherever a greenhouse was even whipped by its tail. And when the owners came to replace the glass they found that it cost them a pretty penny.

We know of one large grower who suffered from the storm but was fortunate enough to have a suitable amount of glass packed away in the cellar. This glass cost him \$1.50 a box when he bought it. It was a fortunate purchase for when he went into the market to get enough extra glass to complete the repairs, he was obliged to pay \$10.50 for it. With such prices prevailing and the labor costing as it does, the setting of new glass is a costly operation. Of course if the grower is a member of the Florists' Hail Association he is not such a heavy loser, but many growers, especially in New England, prefer to take their chances and in the case mentioned there was no insurance to help offset the high price which had to be paid for glass.

It seems to me that we have never known a time when so many well-known florists have remarked that their convenience and inclination would be served very much better if the S. A. F. convention were held at some other season. They complain that they find it difficult to make the train journey to a large city and concentrate on business methods in the month of August. That is the month which is chosen by a large number of florists for their vacation month. To attend the convention they have to leave the woods or the seaside where they are gathering up renewed energy for the next season's business and spend a more or less uncomfortable week in the trains and hotels. Natur-

ally enough the families of these men dislike to have them break into their vacation in this way and their wives do not feel like accompanying them. This season we are informed a number of well-known faces will be missed from the convention at Cleveland for the very reason outlined.

If the conventions were held in October, they say, they would be glad to attend and no doubt would gain much valuable experience and information as a result of doing so. They all recognize the value of the conventions and hope for a large attendance, but state their belief that the cooler month will be welcomed by all hands. This is especially true in the case of members who live a long distance away and have to spend two or three days en route each way.

Of course there is nothing new about this proposition. It has been talked up many a time in the past, and some members have argued for a change to the spring of the year. There are several reasons, though, why fall seems to be more desirable. It is hard for the growers to get away just before Easter, and the Easter date is such a variable one that no regular week could be decided upon as the date for each year.

All in all, the fall seems more suited for a convention of this kind, and October comes after the hot weather is gone, but before the storms of winter interfere with travel. It seems quite possible from what we have heard that the matter of changing the convention date will come up at the coming session in Cleveland.

Now that industries in the cities are shutting down or going on part time, will there be an increasing tendency on the part of young men to seek work in greenhouses or on private estates? The answer to this question will have an important bearing on horticulture. The need of young men in all branches of the business is urgent, and apparently the situation across the water is the same, so that no relief can be expected from that quarter. A writer in the Horticultural Trade Journal of London has the following to say:

"Some time ago I remarked that there seemed to be very few young men coming along to fill the thinning ranks expert propagators and growers of the best classes of plants, and during the past week or so I have had evidence from several different sources that it is a very difficult task to find a man to take a responsible position on a nursery. Of course just now there is similar difficulty in many other trades, for reasons we very well know, but it seems to me that in horticulture we are drifting along without making real effort to remedy matters, and yet there is a good deal that might easily be done.

"What I should like to see is a real Horticultural Trades' Exhibition at which one of the leading features would be competitions with generous awards to nursery workers. Practical demonstrations of grafting, budding and various methods of propagating different classes of plants. Potting competitions, competitions in packing trees, cut flowers, and various other of the nursery hands' skilled tasks would be the sort of thing to make a feature of. With some encouragement of this kind to set up an ideal and strive for it the young fellows in nurseries would attain a proficiency that would abundantly repay all cost of such an undertaking, and the advantage would be mutual to employer and employee when it came to filling an important berth. The man who had proved himself before practical judges to be expert at his particular job would find that proof a valuable asset."

THE ROSE MIDGE

Wm. A. Ross

The purpose of this article is to direct the attention of florists to a serious insect enemy of roses, viz., the Rose Midge, which has within the past few years become established. The midge has been recognized as a rose pest since 1886.

The experience of florists in Ontario and in the United States indicates that this insect, when present, is the most destructive pest with which the rose grower has to contend. Last year in one Ontario greenhouse its depredations caused a loss of \$12,000, and in another \$6,000 to \$7,000.

When abundant, the larvae of the midge—very small whitish maggots—may be found feeding on any succulent part of the rose bush, as, for instance, at the base of the flower buds, within the buds, on the upper side of tender leaves and on leaf petioles. However, the favorite and usual point of attack is on the young shoot in the axil of a leaf petiole. Infested shoots grow crooked and, as a general rule, wither and die. Affected flower buds, when not killed outright, may be so disfigured as to be unsalable.

Fortunately for the florist, the midge remains quiescent in the soil during the winter, when the most profitable crops are grown. Nevertheless, as a Toronto rose grower suggests, the winter crops must suffer as a result of the check the infested plants receive in the summer and fall.

In Mr. Wood's garden at London all hybrid teas and hybrid perpetuals are subject to attack, Mrs. John Laing being the most susceptible. Hybrid Perpetuals, with strong terminal shoots like those of Killarney, are practically immune. All the Polyantha, Bourbons, Hybrid China, Noisette and Wichuraiana roses appear to be immune. In greenhouses Ophelia and Milady roses are by far the most susceptible varieties. Russell, Stanley, Richmond, Shawyer, Hoosier Beauty, Columbia, Sunburst, are attacked to some extent, and here again Killarney appears to be partly immune.

The adult insect is a fragile, two-winged fly, less than one-sixteenth of an inch in length. The female deposits her eggs between the folded leaves of the leaf buds, to some extent in the axils of tender leaves and between the sepals and petals of the blossom buds. Under greenhouse conditions the eggs hatch in about two days. The maggots, as previously stated, feed on the tender tissues of shoots and buds, and become

mature in from five to seven days. They then drop to the soil, change to the pupal stage, and emerge as adult flies in about six days.

The midge is most abundant and destructive during summer. With the coming of autumn it declines in numbers, and by November wholly disappears from the rose plants. It remains dormant in the soil throughout the cold winter months, and does not reappear again until early March.

The only method of controlling this insect, which has been tested on a commercial scale, and found effective, is: Nicotine fumigation and tobacco dust treatment. Break up the lumps and level the soil to as great an extent as possible. Cover the beds with a coat of tobacco dust, ¼-inch to ½-inch thick. Spray the earth walks with kerosene or kerosene emulsion, fumigate nightly with tobacco smoke until all adult midges disappear.

Kerosene (coal oil), 2 gallons.

Rain water, 1 gallon.

Soap, ½ lb.

Slice the soap, dissolve it in boiling water; pour the kerosene into the hot soap solution and churn the whole vigorously with a syringe or pump for about five minutes until a thick creamy emulsion is produced. For use, dilute with nine parts of water.

George H. McIntyre, formerly in business at Easthampton, Mass., has become representative of S. S. Skidelsky of New York.

Mr. W. F. Ekas has been appointed manager of the Baltimore Wholesale Florists and Nursery Co., to succeed J. L. Towner, who resigned in the spring. For several years Mr. Ekas has been associated with the Leo Neissen Co., and is president of the Baltimore Florists' Club, as well as the state vice-president of the S. A. F.

Flowers Under Glass

Give plenty of ventilation in the houses where you are growing begonias and primulas. A light shading is a distinct advantage, and you will need to use the hose in order to keep the temperature down. This doesn't mean soaking the plants, however, because you can injure them in that way. Oftentimes all you need to do is simply spray the plants lightly, wetting them down thoroughly at the proper intervals. This applies to most plants. In fact sometimes, and especially in the fern house, it is well to simply wet down the walks instead of getting the plants too thoroughly soaked. Even in a chrysanthemum house it is best not to give too much water and yet to keep the foliage wet down when the weather is hot, and to spray below the benches always helps to create the moist, warm atmosphere in which plants luxuriate.

Remember that the pansy sowing season is now at hand, but don't try to get along with anything but the very best seeds. In growing pansy plants for market everything depends upon the quality of the seeds used.

In starting perennials many growers find it more convenient to use flats than to plant directly in frames. A nice porous soil is needed. Those who have experimented with some of the newer prepared fertilizers find them excellent for perennials. Most seeds such as are likely to be sown now germinate readily, and the seedlings should be transplanted when small. Prick off as soon as you can handle the plants and put them in the cold frame, or if you desire into an open bed or pots.

If you are growing outdoor shrubs be careful to prune back your spiraeas, viburnums, syringas and diervillas as soon as the flowers fade. Newly planted stock growing freely requires good hard pruning.

If you find a sale for pelargoniums in April and May, make cuttings now. If they have plenty of drainage and are not over-watered, they will prove easy to handle.

The large touring car of Charles Uttley, the florist, of Harrisburg, Pa., recently crashed into a porch on Jefferson st. causing some damage.

Arnold Arboretum Gives Up Bringing in New Plants at Present.

The fact is being brought home to the public that the drastic rulings of the Federal Horticultural Board at Washington are bound to interfere seriously with the progress of horticulture in this country. The facts which were brought out at the horticultural conference in New York recently are being given wide circulation. The Massachusetts Horticultural Society for example is now sending out bulletins giving in full some of the statements made at that conference. The one by Prof. Charles S. Sargent, Director of the Arnold Arboretum, is of especial importance. This statement is reproduced in full as follows:

The Arnold Arboretum is a museum of living plants in which Harvard University has agreed by contract to grow and display every tree and shrub able to support the New England climate. In order to carry out this contract the University has been importing plants and seeds from other scientific institutions and from commercial nurseries since 1874; and for forty years has been carrying on explorations in all parts of North America and in Japan, China, Korea, Manchuria and Siberia. These explorations have been undertaken for the purpose of introducing into this country trees and other useful plants which had been unknown before the establishment of the Arboretum.

The aim of the Arboretum is to increase the knowledge of trees; its museum of living plants growing in Massachusetts is only one of its methods for accomplishing this purpose. It is interested in increasing the knowledge of plants in all parts of the United States and in all foreign countries. Much of its work of exploration has been undertaken for the purpose of bringing into this country and into Europe trees which can succeed only in the Pacific states, Louisiana, Florida, or the milder parts of Europe. For the Arboretum there is no foreign country.

The Arboretum is not charged with having introduced into this country any serious plant disease or dangerous insect on the many thousand plants which have been imported, often with soil at their roots, from every country of the northern hemisphere, or on any of the millions of seedlings which it has raised and distributed. During its entire existence plants have come to the Arboretum from foreign countries

except during the autumn and winter of 1919-20. The Arboretum desired to import from Europe a few plants in the autumn of 1919 and received permission from the Federal Horticultural Board to do so on condition that they were sent first to Washington for inspection and disinfection. It was impossible to arrange for the inspection of these plants at Boston; and the Arboretum, having had unfortunate experience with early importations which had been sent to Washington for inspection by agents of the Federal Horticultural Board, has decided to give up entirely importing plants and seeds until some modification is made in the methods of the Horticultural Board. As the Arboretum has been active and successful, especially in the last twenty years, in the introduction of new plants into the United States it is believed that its inability to continue this work will be a serious blow

to horticultural progress in the United States.

The managers of the Arboretum, in common with every intelligent and public-spirited citizen of the United States, believe in the exclusion of plant disease and insects destructive to plants; they believe that the methods and rulings of the Horticultural Board can be modified and improved so that the desired results can be obtained without subjecting imported plants to the dangers and delays which it is impossible for them to escape under the existing regulations and methods of the Federal Horticultural Board. Officers of the government realize that these methods and regulations cause serious delays and the unnecessary destruction of plants, and agree with many importers that these delays and dangers can be reduced by the establishment of inspection stations at ports of entry and by

changes in the list of excluded plants. If such inspection stations could be established more prompt and better service would certainly be obtained. Such changes can only be obtained by the active cooperation of every organization and of every individual in the United States interested in the cultivation of plants; and it should, I believe, be the duty of this Convention to urge the necessity of cooperation with the Department of Agriculture in an attempt to obtain changes in its rulings and methods in regard to the importation of plants on which the future of American horticulture depends.

THE LANCASTER COUNTY FLORISTS' ASSOCIATION

It takes a lot of nerve to prepare for a picnic on St. Swithin's day but this association has plenty of nerve and Thursday, July 15th, was selected as a picnic day in which to entertain our friends and neighbors the Chester County Florists' Association. Every member of both associations was duly invited to attend, and a goodly number accepted the invitation.

The run from the various points in Chester County was made in the early morning hours and the meeting place was Elmer Weaver's whose houses are situated on the Lincoln Highway. Starting from here 10.30 a. m. they were conducted to Avondale Farm the home of B. F. Barr, where they were met by a host of our own members and the day began.

The first procedure was of course a welcome from Mr. and Mrs. Barr followed by a picnic lunch served by the young ladies of the party thus adding the spice and good fellowship needed to get every one acquainted.

A tour of the hundred acre farm was made and the wonderful collection of evergreens, all varieties, all sizes and the acres of them were a revelation to the visitors. One block among the shade trees of some 150,000 Norway Maples just right for the coming fall and spring work were pronounced wonderful.

About 2 p. m. every one piled into automobiles and went to the home of President Buchanan; known as Wheatland and now occupied by our friend and fellow florist (now retired) Geo. B. Willson. The grand old style furniture of Buchanan's time and the home itself and the geniality of mine host Willson helped us spend an hour and a half very pleasantly while St.

Swithins got in his work for the day.

After the rain the next point was Maple Grove where some of the younger members of the party enjoyed the bathing in what is acknowledged as the largest and most complete swimming pool in eastern Pennsylvania. Here the sports were pulled off and the first being one in which the contestants had to eat an egg biscuit and immediately thereafter whistle was won by Mr. A. K. Rohrer and Miss May Brennehan. In the running races prizes were won by Daniel Irwin Herr, Jacob Bare, Ruth Landis and Rosanna Rohrer. In the egg and spoon race Alice Weaver and Lavina Hostetter won the prizes. Nursing bottles fitted with nipples were then passed out and the one who emptied the bottle first won out, in this case being our friend Mr. Thomas Larkin of Chester County who after the November election will be Hon. Thomas Larkin.

The dinner was to have been held at Rocky Springs but through some misunderstanding about fifteen hundred colored people from Coatsville had the use of the grounds and we switched to Penn Square where Mr. McConomy served us an excellent repast, made the more excellent by the beautiful decorations put up by B. F. Barr, Harry K. Rohrer, Willis B. Girvin and Mrs. A. M. Herr. Flowers on an occasion of this kind have no commercial value in the eyes of our Lancaster County growers and they had

plenty of material to work with, Mr. Elmer Weaver alone furnished over a thousand Pilgrim roses and every one of the twenty tables was strewn with these roses.

After the dinner President Willis B. Girvin called on Ex-President Elmer Weaver to act as toastmaster which he did to perfection. The address of welcome was made by Mr. B. F. Barr responded to by Mr. F. Carey of the Chester County Association, followed by brief talks by Mr. S. S. Pennock of Philadelphia, Mr. M. J. Brinton of Christiana, Messrs. Thomas Larkin and Percy J. Barnard of Chester County, Mr. James Brown of Coatesville and Mrs. Albert M. Herr.

The visitors from Chester County were Mr. and Mrs. F. Carey and the Miss Careys, Mr. Thomas Larkin and Mrs. Larkin, Mr. B. J. Passmore and Mrs. Passmore, Mr. Percy J. Bernard and Mrs. Bernard and another Mr. Bernard and wife (whose initials I failed to get), Mr. James Brown and Mrs. Brown, Mr. S. S. Pennock, Mr. Fancourt and Mr. Dennis Connor of Philadelphia and last but not least Mr. T. J. Nolan of King Construction fame.

The committee who arranged for the day were Messrs. B. F. Barr, Harry K. Rohrer, Lemon Landis, Elmer Weaver and Mrs. A. M. Herr and the participants all pronounced the arrangements O. K.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have been interested to note that the new rose, F. R. Grootendorst, has aroused considerable interest at the Rose Test Garden in Minneapolis, and that it is highly thought of there. This is a new type of rose, and judging from the specimens in my own garden, is going to make a worthwhile addition to varieties which are suitable for massing in landscape work and possibly for hedges. This doesn't mean that the rose is not a good one for small gardens, either. It throws an immense number of blooms, and its habits include some of those which characterize its two parents, the baby rambler and *rosa rugosa*.

The flowers are odd because of the curious notched appearance of the petals. I know of no other rose which is marked in just this way. The color is a good red, and one which holds well.

The rose was originated by Grootendorst, in Holland, I understand, but a fair stock now exists in this country. I know that Jackson & Perkins, of Newark, N. Y., have been growing it for a year or two, and Mr. W. R. Pierson tells me that there is quite a field of roses on the A. N. Pierson place at Cromwell, Ct. I understand that the rose is to be catalogued this year, and I have no doubt that it will meet with a wide sale as soon as its peculiar merits are appreciated.

Without much doubt Mr. A. J. Pauls of Palisades Park, N. J., is growing the largest specimen of *Azalea Schlippenbachii* in this country. As a matter of fact, the number of plants of this remarkable rhododendron as yet found in this country is very small. Mr. Pauls' plant, however, is about six feet high and nine feet in diameter. It blooms freely each season and was a picture of remarkable beauty this year. It will be remembered that this is the azalea which has attracted much attention at the Arnold Arboretum, and seeds of which have been distributed to many propagators in this country and abroad by the director, Professor C. S. Sargent, these seeds having been obtained by Professor E. H. Wilson. The plants at the Arboretum, however, are not nearly so large as Mr. Pauls', and neither are those on the Proctor estate at Topsfield.

Azalea Schlippenbachii promises to be one of the most valuable broad

leaved evergreens for American gardens, and especially for New England and other northern states. It blooms early, is remarkably beautiful, and entirely hardy. No doubt it will come into commerce before long, as a number of nurserymen have expressed interest in it. Its name is rather against it, but perhaps a less difficult name will be obtained for popular purposes. The name *Schlippenbachii* was given in honor of a Russian admiral who is also an expert horticulturist.

Climbing roses, as I said last week, are growing rapidly in popular esteem. Somehow they seem to be especially adapted to suburban homes, and I am glad to find that they are being planted in greater variety. There are several distinct classes of climbing roses. Some kinds make a wonderful show in the garden, but are of little value for cutting, while others last quite as well when cut as any bush rose. Two varieties which I find giving the greatest satisfaction to amateurs who grow them are the climbing American Beauty and Dr. Van Fleet. The American Beauty climber is one of the first to bloom, and seems to be hardier than almost any other climbing rose. It goes through the hard winters of Minnesota and other Northern states where almost every other kind is killed back unless taken down and pro-

tected. The blossoms are large and showy, and last well before dropping.

Dr. Van Fleet is among the very best of climbers for cutting. It will last fully a week in the house, and keeps its color much better than out of doors. When it first appears there is no climber and few bush roses to surpass it in sheer beauty of form and delicate shadings.

My *Excelsa* has been very late in opening. In fact it is just showing color when this is being written, the eighth of July. Usually it comes earlier, and I find it one of the best of roses to grow on a post.

I have noticed that *Rubus Odoratus* is making a good show in the Jamaica Plain Parkway in Boston. This is really a delightful shrub and one which is worth more attention in private gardens. Some people, I believe, report having difficulty in growing it, but I cannot understand why, as it seems to be perfectly hardy with me and flowers very freely. It has a tendency to spread like any raspberry, a tendency which must be curbed, although it provides an easy way for getting new plants in abundance. It is a gracefully growing shrub, and handsome even when not in bloom.

Visitors to the Arnold Arboretum have been impressed with the attractive arrangement of climbing vines on the walls. This is a matter which has been given much attention by Prof. C. S. Sargent, the Director, with the result that landscape effects of great beauty have been secured by the use of vines in this way.

A MIDSUMMER RAMBLE

The garden was gay with flowers, but we wanted to go on a ramble, to see the white Japanese iris abloom above the brown waters of the brook. So down we went by the corner of the woods where the stately foxgloves were reaching up against the brown trunks of the pines, and the pyrola was ringing its dainty bells. Here the yellow loosestrife was also in blossom with the flowers growing out from the whorls of the leaves, while by the brook we found the taller variety with its tasselled top. Here also by the brook were the bright red berries of the early blossoming elder and the bountiful blooms of the later kind. A shrub so full of flowers this summer that we feel that it almost compensates for the heavy fall of the winter snows, which wetting down around its roots has brought us this profusion of bloom. Above a gray stonewall the spikes of purple fireweed rose, and the snow white blossoms of the swamp azalea seemed the most beautiful of all. Unless we except the tall feathery blooms of the meadow rose, the hybrids of which in the glaucum and dipterocarpum variety have brought such beautiful tall flowers to our gardens.

The asters or Michaelmas daisies are not yet in blossom, but the daisy fleabane suggests the wealth of beauty which will later come from them. The brown-eyed Susans or rudbeckias are already making glad our fields. Quarantine 37 may keep many flowers from our houses and gardens, but we all like to be good Americans today, so let us take these rambles among the flowers of our woods and fields.

M. R. CASE.

Hillcrest Gardens, July 15, 1926

BUDDING ROSES.

July and August are the two most suitable months for budding. As a rule, neither buds nor stocks are in the best condition until then, while to delay until September often means an indifferent union of bud and stock through the sap not remaining sufficiently active, says a writer in *Gardening Illustrated*. Budding should be done when the bark lifts readily from the stock, and when the bud can be taken from the portion of rose growth easily and cleanly. It often happens that the stocks are dry at the root. A thorough watering will generally have the desired effect in about a couple of weeks. Much of the flow of sap is checked by any pruning away of growth previous to budding. If it is necessary to do this, by all means let it be done a fortnight or so beforehand, as we want a free flow of sap while the bud is setting.

Another too-frequent mistake is using buds that are not even half ripe. The stock is often, also, operated upon in much too young and soft a condition. Both should be in what I may, perhaps, best describe as matured without being ripe, and it is very essential that the bud be matured. More thought should be given to the "seat" or "heel" of the rose bud, which is exposed upon removing the small portion of rose wood covering it after it is taken from the plant. Unless this is prominent and well developed so as to rest upon the exposed wood of the stock it seldom grows, and never makes a really good union. If too forward, the seat or heel will tear out with the portion of rose wood, and leave a hollow and valueless space. If too young, the seat will not have developed, and, of course, is equally unsuitable.

Numerous cases come before me where the operator has cut too deeply into the wood of the stock, and upon

not a few occasions I believe this to have been the sole cause of failure. The cut should never penetrate more than just deep enough to allow of the bark being lifted from the wood, and this should be done with as little disturbance of the glutinous sap as possible. Some few readers may not possess a knife with a properly-constructed handle for lifting the bark readily. Let such shave up a piece of hard wood or bone, and they will find these answer equally well.

Always tie firmly, more especially around the eye or bud, so as to make sure of the seat or germ coming well into contact with the wood.

TRUSTWORTHY TREES

In buying nursery stock the purchaser is utterly at the mercy of the seller. The same is true in the seedman's business. In all commercial activities a reputation for trustworthiness is the most valuable of assets, but for the nurseryman and the seedsmen it is absolutely indispensable. Their goods must be bought on faith and their records must indicate that faith is not misplaced.

The American Association of Nurserymen, which has just been in convention at Chicago, lays great stress on the necessity of selling only perfect stock. "Trustworthy Trees and Plants" is the trade-mark of the association. No misrepresentation of any kind is tolerated. All stock must be advertised under its correct name. Trees and shrubs which may otherwise be up to specifications, but which are too old or which are adapted only for certain soils are not shipped except with due notice of the facts.

Chicanery in the nursery business is peculiarly contemptible because it is so easy. The country's reputable nurserymen, many of whom are located in the near vicinity of Tacoma, are determined to rid their business of unprincipled competitors. This is the day of honest advertising and square dealing, and the nursery interests are wise to keep their reputation unsmirched by the hocus-pocus of any who may hope to derive profit through dishonest dealings.—Tacoma, Wash., Times.

SOME GOOD SHRUBS

A List of Plants Recommended by Prof. C. S. Sargent

Although notes are published year after year in these Bulletins about new or little known shrubs as they flower, the Arboretum is constantly asked for lists of the best new shrubs for northern gardens; and in response to this request it now submits another list of comparatively new plants. The plants in this list are hardy in southern New England and the middle states. The two Rhododendrons, however, cannot be grown in soil impregnated with lime. Several of these plants cannot, unfortunately, be found in American nurseries; they are, however, easily propagated and a demand for them will in time produce a supply. The list contains the names of eighteen of "the best" new shrubs; it might easily be increased to a hundred for there is a large number of new or little known shrubs now growing in the Arboretum which American garden-makers unfortunately neglect. The plants selected today are:—*Hammamelis mollis*, *Prinsepia sinensis*, *Corylopsis Gotoana*, *Amelanchier grandiflora*, *Forsythia intermedia spectabilis*, *Cotoneaster hupehensis*, *C. racemiflora soongorica*, *C. nitens*, *C. multiflora calocarpa*, *Rosa Hugonis*, *Neillia sinensis*, *Rhododendron Schlippenbachii*, *R. japonicum*, *Berberis Vernae*, *Syringa Sweginzowii*, *Spiraea Veitchii*, *Philadelphus purpurescens*, and *Evonymus planipes*.

Like the other Witch Hazels of eastern Asia, *Hammamelis mollis* blooms in the winter and the flowers are not injured by the severe cold to which they are subjected in the Arboretum. This plant has handsome foliage and larger and more brightly colored flowers than the other Witch Hazels, and is invaluable for the decoration of winter gardens. *Prinsepia sinensis* is considered here the best shrub the Arboretum has obtained from Manchuria. It is valuable for its perfect hardiness, the fact that its dark green leaves unfold before those of any other shrub in the Arboretum, with the exception of those of a few Willows, and for its innumerable clear yellow flowers which open before the leaves are fully grown. The stems of this shrub are armed with stout spines and it should make a good hedge plant. *Corylopsis*, which is an Asiatic genus related to the Witch Hazels, has handsome yellow, early spring flowers in drooping clusters which appear before the leaves. There are several Japanese and Chinese species in the Arboretum but only the Japanese *C. Gotoana* has

been uninjured here by the cold of recent years, and it is the only species which can be depended on to flower every year in a Massachusetts garden.

The *Forsythia* of the list is still the handsomest of the varieties of *F. intermedia* which is the general name of the hybrids between *F. suspensa* Fortunei and *F. viridis*. This variety was raised in a Germany nursery and is the handsomest of all the *Forsythias* now known in gardens. *Amelanchier grandiflora* is believed to be a hybrid between the two arborescent species of the eastern United States, *A. canadensis* and *A. laevis*, and is by far the handsomest of the *Amelanchiers* in the large Arboretum collection of these plants. It came here from Europe but what is believed to be the same hybrid has been found in several places in the eastern states.

The four *Cotoneasters* in the list are perhaps the handsomest of the twenty odd species introduced by Wilson from western China. They are all large shrubs of graceful habit, and have white flowers and red fruits with the exception of *C. nitens* which has red flowers and black fruit. In recent years the Arboretum has made few more important introductions for American gardens than the Chinese *Cotoneasters*.

Although no longer a "new plant" *Rosa Hugonis* is included in this list because it is not only the handsomest of the Roses discovered in China during the last quarter of a century, but in the judgment of many persons it is the most beautiful of all Roses with single flowers. Fortunately for American garden-makers the value of this Rose is appreciated by a few American nurserymen from whom it can now be obtained.

The introduction of *Neillia sinensis* made it possible to add to the Arboretum collection a representative of a genus of the Rose Family which had not before been cultivated in the Arboretum. There are now other species of *Neillia* grown here but some of them are not entirely hardy, and others have no particular value as garden plants. *Neillia sinensis*, however, has never been injured by cold, and with its drooping clusters of pink flowers is a handsome plant well worth a place in any garden.

Rhododendron (Azalea) Schlippenbachii is one of the most important introductions of recent years. A native of northern Korea, it grows further north and in a colder country than

any other *Azalea*, with the exception of the *Rhodora*, and there can be little doubt that it can be grown successfully in the open ground much further north in the eastern United States than any of the other Asiatic *Azaleas*. It may be expected, too, to prove hardly further north than the American species with the exception of *Rhodora*. The large pale pink flowers of this *Azalea*, although less showy than those of a few of the other species, are more delicately beautiful than those of any of the *Azaleas* which have proved hardy in the Arboretum. There are a few plants of this *Azalea* large enough to flower in the United States, and many seedlings have been raised here and in Europe during the last two years. Until these are large enough to flower it will probably remain extremely rare.

Rhododendron (Azalea) japonicum cannot be called a new plant for it has been growing in the Arboretum since 1893, but it is such a valuable plant and is still so little known or understood that it can perhaps properly find a place in a list like this. The large, orange or flame-colored flowers make it when in bloom one of the showiest of all the hardy *Azaleas*.

Berberis Vernae has been mentioned in a recent number of these Bulletins; and it is only necessary to repeat what has already been said about it, that it is a hardy plant of exceptionally graceful habit among *Barberries*, with arching and drooping branches from which hang innumerable slender clusters of small yellow flowers followed by small red fruits. *Berberis Vernae* has proved the handsomest of the large number of

Barberries with deciduous leaves found
by Wilson in western China.

Among the numerous species of Lilacs introduced into gardens from China during recent years *Syringa Sweginzowii* is considered the most beautiful by many persons. It is a tall shrub with slender erect stems which produce every year great quantities of pale rose-colored, fragrant flowers in long rather narrow clusters. It has the merit of being almost the last of the Lilacs in the Arboretum collection to bloom. *Spiraea Veitchii* has the merit, too, of being the last of the white-flowered *Spiraeas* to flower. It is a shrub already 6 or 8 feet tall in the Arboretum, with numerous slender stems and gracefully arching branches which about the first of July are covered from end to end with broad flower-clusters raised on slender erect stems. This *Spiraea* is one of the best of the hardy shrubs discovered by Wilson in western China, and by many persons it is considered the handsomest of the genus as is now represented in the Arboretum.

Euonymus planipes is a native of northern Japan and a large shrub with large dark green leaves and the in conspicuous flowers of the genus; and it is only on account of the beauty of its fruit that this plant is included in this list, for the fruit which hangs gracefully on long slender stems is large, crimson, very lustrous and more showy than that of any of the other Burning Bushes in the Arboretum.

ARNOLD ARBORETUM BULLETIN.

EUONYMUS RADICANS

Euonymus radicans is the only evergreen climbing plant really hardy in this climate which can attach itself firmly to stone, brick or concrete walls. There are a number of varieties of this variable plant in cultivation, and the handsomest of them is the broad-leaved form from northern Japan, known as var. *vegetus*. This plant can grow in Massachusetts to the eaves of a tall house and completely clothe its walls with a cover which grows thicker by an annual shortening of the branches, or if a wall is not provided for it to cling to it will grow as a low round-topped dense shrub. Like the other forms of the species it can also be used to cover the ground under trees and shrubs, but as a ground-cover it is improved by occasional clipping.

This variety *vegetus* is now covered with its small yellow-green flowers which will be followed by abundant pink fruit, which adds greatly to the decorative value of this variety which

LEMON OIL COMPANY

Dept. S. 420 W. Lexington St., Baltimore, Md.

THERE'S ALWAYS A REASON

With a firm tread and masterful air, the lady strode into the florist's shop. Her choice fell on a remarkably green palm in an ornamental pot.

"Will it do well in the sunshine?" she inquired of the shop assistant, with a sharp glance from her eagle eye.

"Yes, madam," was the courteous response.

"Don't say it will, if it won't!" snapped she amiably. "If it does well in the sun, will the shade hurt it?"

"Oh, no, madam!"

"What!" she exclaimed with a triumphant, now-I've-caught-you-air. "You tell me it will do equally well in sun or shade? Young man, you don't know your business! Fetch your master!"

The owner of the establishment was instantly summoned. Even he quailed before her, but for all that, he backed up his employee's statements.

"Then it's a really remarkable and accommodating plant!" she commented, waxing sarcastic. "My good man, it's both ridiculous and unnatural!"

"That's just it," interrupted the floral expert. "It's an artificial plant."

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species-names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN

The correctness of the theory of our Publicity Committee that a good deal of the apathy on the part of many florists toward our Publicity Campaign is not at all intentional is demonstrated frequently through letters arriving at the Secretary's office.

We are sure that the writers of some of these letters will not mind our making them public, especially as they have all along been in sympathy with the work. This week H. E. and C. W. Krebs, florists and vegetable growers of Cedar Rapids, Ia., wrote: "Here-with find our cheque to help the good work along. We more than likely have reaped many benefits from the work of the campaign, and we wanted to send in our contribution a long time ago, but were too busy making the harvest, and when we would think of it, we were not near the cheque book and then when writing cheques, we would not think of it. Reading over a trade paper in our leisure time, the writer noticed your appeal for more funds in order to carry out your plans to their fullest scope, and with guilt on our conscience—that we have reaped the benefits of someone else's time and money—and so as not to go down as one of the florist slackers, we gladly contribute our amount. Doubtless many other florists are just like us, and they will still have to be hammered away at. The campaign is a good thing and we expect to do our part hereafter."

We consider that a heartily good letter, and are glad to publish it because we know that many another florist could conscientiously write along the same lines, and after reading this may do so. We do not believe, and never have believed that florists are purposely withholding support from this glorious movement for the best interests of the trade.

Here is another letter, from F. Fallon, the retail florist of Roanoke, Va "Enclosed find cheque, in sending which I feel as though I am merely paying fare on a very good train, and not making any sort of contribution."

Mr. Fallon hits the nail squarely on the head. He is not really making a "contribution" as that word is generally used and understood, nor is anyone else who has subscribed to the campaign fund. "Paying fare" is a better stating of it—we like it that way.

NEW YORK

Come to think of it, very many of our subscribers have objected to the word "contribution" as meaning a subscription to the fund. There is a charitable air about it, indicating a feeling such as a florist has when giving an advertisement to a church publication, a fireman's picnic program, or some other publication which is more or less camouflage for a collection. We have all experienced this. It is not so with our Publicity Campaign. Every florist who subscribes to the campaign fund should feel that he is making an investment, and a good one to. He has both right and reason to expect a profitable return for this investment. Very many florists are enjoying such benefit prior to making the investment, and these we would refer again to the letter of the Krebs firm, with the devout hope that they will take it to heart and follow the good example set.

As this article is written a telegraphic message is received to the effect that the Texas florists at their convention this week raised \$1,000 for the Publicity Fund. Let the good work go on.

The following subscriptions are in addition to those previously announced; annually for four years unless otherwise stated:

JOHN YOUNG, Secy.

43 West 18th Street,
New York.

In little more than two weeks' time those of us who have decided that it is for our good to attend the convention in Cleveland, August 17, 18 and 19., will be en route to the Convention City.

Many of us, no doubt, will carry with us little problems pertaining to our every day business life which we are unable to solve to our own satisfaction, owing, perhaps to a limited experience, or absence of opportunity in our own neighborhood to get information or advice which might help us in making decisions.

The convention furnishes full and

Originator and Introducer

ample means for the discussion of any subject pertaining to the trade. It is not necessary that a subject be one for presentation on the convention floor; it may concern only the one personally interested in it, and discussions in meeting are confined largely to subjects of general interest.

The floor discussions do not embrace all the informative benefits of the convention, far from it. Our personal problems are matters for discussion with our brother florists whom we meet at this annual gathering, and who are ever ready to detail their experiences, good or bad, along particular lines. A planting may have gone wrong; there may be a doubt as to the advisability of growing a certain product; a difficulty may exist in the way of a profitable marketing; perhaps a heating system is not working well; a method of propagation may be

faulty; insect troubles, disease, fertilizers, plant varieties, all may entail problems on which enlightenment is sought. The numerous little hands always at our convention will be found ready and anxious to help us with such questions, and we most assuredly will get what we seek. At the convention we become one great family, each member striving to help the other when help is needed, and this good fellowship is one of the greatest charms of the gathering.

It may be that many florists who have not yet joined our society do not look upon our organization from this point of view. To all such I would emphasize the fact that we are a brotherhood as well as a business organization, and they can ill afford to hold aloof.
A. L. MILLER, Pres.
Jamaica, New York.

George Watson's Corner

"You in your small corner and me
in mine."

Howard M. Earl, of the Jerome B. Rice Co., writes from London, July 7th, that he has had a busy two months in France and other parts of the Continent, and would finish up on the British field of operations in time to sail for home on the S. S. "Imperator," July 31st. So we may expect him around his old haunts in Philadelphia about mid-August. He has been inspecting crops, and sizing up things new or meritorious; and doing his little bit to keep the old world in touch with the new world, and vice-versa, as becomes the representative of a great firm that is world-wide in its activities for the betterment of horticulture. The public does not hear much about them, as they deal with the trade only, but they are nevertheless a most vital factor. They start things, and the old millwheel from producer to consumer does the rest. The spokes on the wheel are many, and they all deserve their share of credit; but especially the "papa-spoke"—and that one the public, as a rule, knows nothing about, and gives the credit to the nearest one they can see. Which is why, while finding no fault at all with anybody, we like to get a chance now and again, to say, "Hats off, boys, to old 'papa-spoke.'"

Henry L. Renard, of the Burpee Co., is on his way to the Floradale Farms in California to take charge of growing stocks and developing plant specialties. He has been an assistant of

George W. Kerr at Ford Hook for some time past.

Don't say there's no excitement in the flower market in mid-summer. Just let a fire start in a big building in the flower exchange center—no matter if it's only a million dollar rug foundry next door—then you'll see them all go up in the air—and many of them, like Samuel S. Pennock, go up on the roof. The Fritz & La Rue building extended right back from Chestnut to Ranstead and for a while the Leonard & Deutscher place, the Reid place and the Pennock place were all in grave danger. Two firemen were killed and there were eight sent to the hospital. The blaze happened on the 21st inst and caused over half-million damage.

We had the pleasure of a call recently from John H. Slayter, president of the new corporation of A. Leuthy Company of Roslindale, Mass. He is of the younger generation but bears all the ear marks of the good old stock from which he is sprung and which has made Boston floriculturally famous during the past half century. A gentleman, a scholar, a good business man and an all-round good fellow. The old pirate, Antoine, was along, giving John the introductions; but no doubt he will survive that, although it must have been tough at times! Mr. Slayter married one of Bill Edgar's lassies so he has a bit of the sage of Waverley by him to help out. We will all have to be on the quiver these days to get in touch with these bright young men who are taking their fathers' places and we are glad to be able to record a good fitter when we meet one, and John Slayter seems to fit in very well. Good luck to him.

Among the fancy quality gladioli now on sale every morning in the Pennock market, we noted the following on the 23rd inst: Autumn Queen, white and blush, with crimson streak on the lower petal; Halley, soft red; Will-brink, blush; Sunbeam, pure deep yellow; Myrtle, bright rose-pink, a beautiful variety, and one of the best sellers; White Giant. These are only a part of what is arriving daily. Expect to have something to report about other good ones later.

The second game of the series between the Pennock Baseball Team and the picked nine of the Associated Wholesalers was played on the afternoon of July 20, and resulted in a victory for the Wholesalers by the score of 4 to 3 in a game of 11 innings. Cousins distinguished himself in the 11th with a double to centerfield scoring the winning run. Another brilliant play was the catch by Floyd Reid with two on bases, which practically prevented the Pennocks from scoring two runs. The score follows:

	R	H	E
Associated Wholesale Florists.	4	8	2

GENERAL NEWS NOTES

About fifty persons attended the annual outing of the Scranton, Pa., Florists' Association at Harvey's Lake, July 15th. The trip was made by motor and both lunch and supper were served. The competitive games were postponed on account of rain, but the excellent bathing was taken advantage of by many of the party.

Miss Claire Louise Hodgdon, a former employee of the Belmont Flower Shop, Brockton, and Earl C. Sampson, a world war veteran, were married July 12th, at Plymouth, Mass., where the young couple plan to reside.

HORTICULTURE

Vol. XXXII

JULY 31, 1920

No. 5

THE TALK OF THE TRADE

Latest advices from California regarding the freesia crop bear out in every way my statement of some weeks ago that this crop would be short. From what I can understand now, it has turned out to be a smaller crop than was to be expected, predictions of as short a supply as 40 to 50 per cent. This of course, means a general hold-up for a short time in the taking of orders at set prices. As it is, advance orders are located and some definite knowledge is obtained as to further supply, new prices to be expected, but everyone is up in the air and orders are taken subject to crop and market price.

Growers who are preparing for crops of sweet pea blooms the coming season are getting started now, and I find that quite a number are considering favorably Australian-grown seed. This is said to produce blooms in a shorter space of time, successful growers finding it possible to cut in six to eight weeks. It is also said that the Australian sweet pea crop besides producing earlier blooms has a longer blooming season and stands the hot sun better.

Mr. H. H. Barrows of Whitman, Mass., has his houses well filled with ferns, and I was mighty well pleased to hear his favorable comments on the new fern *Macawii*. He has a large stock, but is increasing just as fast as he can, and says that it is one of the best ferns that he has ever had anything to do with. He has *Macawii* in all stages, from runners up to six and seven-inch pots, and his houses from one end to the other hold a fine lot of stock, in spite of the handicaps he has gone through in the way of labor. Of course, Mr. Barrows' own fern, *Whitmani*, is always a leader with him and deservedly so. Besides these sorts, he goes heavily into Boston and Teddy, Jr. I am not sure, but he has either discarded *Scottii* or grows very little of it, but he like many other fern growers has come to the conclusion that *Macawii* is hard to beat, is here to stay, and is bound to be one of our leading sorts.

The Shoe and Leather Show held at Mechanics Hall, Boston, last week

would have been a mighty interesting place for any florist to visit. I went without any thought of seeing flowers or decorations of any kind which were natural, but I can tell you that I received a pleasant surprise and I for one feel grateful to Chester I. Campbell for the way the decorations were carried out. One stand after another had either flowers or plants displayed, in fact, I don't remember seeing one stand in the whole show that didn't have a palm, hydrangea, fern, vase of gladioli, roses or some flower; and the general appearance all through the building was very pleasant indeed.

Thousands of gladiolus blooms were used, and great quantities of roses and carnations. Christie Miller rose was strongly in evidence on the night I was there, and it showed up very nicely. At this time of the year, this rose shows up particularly good. At the Style Show, armful after armful of

carnations were thrown out into the audience.

Thomas F. Galvin, Jr., had the florist concession at the show and handled it in a thorough manner. Thomas F. Galvin, Inc., had about 300 plants and many other decorations, including three electric fountains.

Indications at present are not very bright for a heavy crop of violets this coming season, and if the grower can't expect any better prices than he got last season then he is entitled to discard this crop entirely. It is not for me to say who is responsible for these low prices or who can make it possible to get better prices, but if the retailers expect violets and want them for their trade, they certainly are going to be obliged to stand for a higher market than was gone through last year.

Very few, excepting those who have had actual experience in bunching, realize what that item alone means. It is not easily done, is necessarily slow and hard on the eyes, and the labor on this crop, so far as picking and bunching goes, is probably higher than most any other crop of cut flowers. With wages where they are now and have been for some time past, that point alone adds materially to the cost of production.

Rose Frank H. Dunlop is showing up in fine shape from early plantings. To say the least, it is a quick grower, and shows a vigor that promises well for this as a paying variety. There was some fear as to its tendency to mildew, but this trouble showed up mainly on the young plants in small pots, and from personal observation, as soon as the small pots were benched and growing well, they threw off the mildew and jumped right ahead. Here's hoping that it will turn out as well as indications now point.

A visit last week to Halifax Garden Company shows this place fast whacking into shape. Mr. Holmes deserves credit for the good work he has done in the short time that he has been in charge, and it is but a short time now when he will start cutting roses; and the various houses of young stock are in such condition that I believe you will see good crops coming from this place. Carnations and

Burpee's Hybrid Gladioli

chrysanthemums also look in good shape, and he is planning for a good quantity of *Asparagus plumosus* and *sprengeri*, also sweet peas, calendulas and mignonette. The houses and heating system, in fact everything about the place, are being put into first-class condition, and results already show that there has been no time wasted.

I am very glad to note that Mr. John Watson has been reelected secretary of the American Nurserymen's Association. Mr. Watson is very much of a live wire, and has been one of the most active spirits in bringing about a better feeling towards the nurserymen throughout the country. It is not to be disputed that a certain sentiment had grown up in some way, leading to the belief that nurserymen were often inclined to misrepresent their goods and to mislead the public. Of course the majority of nurserymen are striving to carry on their business in the most straight-forward way and without resorting to underhand means. At the same time, a few men in the trade have committed acts which have tended to bring criticism on nurserymen in general. Under the leadership of Mr. Watson, a vigorous campaign has been carried on to bring the recalcitrant nurserymen to terms, and to let the public know that the majority of nurserymen should not be judged by the disgraceful tactics pursued by a few men in the business. Mr. Watson is the kind of man needed as secretary of the Association, and I am very glad that his good work is being appreciated.

I understand that considerable work is to be done right away on the Gae-deke Greenhouses at Nashau, N. H. I am told that the buildings are to be entirely remodeled and brought up to date, making this plant adapted not only for the growing of flowers but for the production of vegetables as well. The plant will be open for business again about Labor Day.

It's a striking and telling pamphlet which the Florists' Club, of New York, is putting out in preparation for the S. A. F. and O. H. convention at Cleveland. The line on the outside cover is certain to attract immediate attention. It is printed in big black letters and reads:

Brush the Cinders Out of Your Whiskers and Pack up the Old Black Bag.

Underneath is a picture of an aged gentleman with a grip who seems to be very much in a hurry, although the stovepipe hat doesn't seem to fit in well with the general conception of a

florist. However, such hats have been seen, even at a florists' convention. Also in the booklet are amusing little thumb sketches and clever arguments following one another with great rapidity, all emphasizing the necessity of making immediate reservations. There are, for example, such observations as these:

"Remember the date, August 16, 10 a. m. That's when the greatest bunch of florists that ever went west together will pull out from New York on Phoebe Snow's own special line. There will be lots of smoke—but not from the engine. It will come from the cigars of your good old friends—boys from Boston, and Philly as well as nearer home!"

If the delegation isn't a big one, it will be owing to no fault on the part of the transportation committee, of which Mr. C. Lowther is secretary.

CEMENT INSTEAD OF GRASS.

A lady in Los Angeles has got her name in nearly all the papers through having devised what she calls a cement lawn. Instead of turf, she has a layer of cement over her yard, with holes cut here and there for trees and shrubs. The cement is painted green and the lady expresses herself as quite satisfied, since there is no longer any watering or moving to be done.

Thus she gets great renown in return for very little ingenuity. All she did was eliminate grass in order to save labor. The same idea is back of the gas fireplace, the bouquet of imitation flowers, the dickey and the celluloid collar. It accounts for the popularity of pills as a short cut to health in place of the more arduous route of physical exertion and sensible diet.

If the main object in life of the Los Angeles lady is to avoid the trouble of mowing and sprinkling a lawn, then she did well to use cement. Most other persons, however, having still a lingering fondness for springy, fresh, green turf, will not object to doing a little extra work, even though lawn mowing does cut down one's spare time for motoring, dancing and bridge whist.

Most really pleasant things require bodily effort for their maintenance. This is particularly true of pleasant things about a house. Cement would free us of a lot of work, if used for all purposes. Cement furniture would not have to be kept polished and free from scratches. Cement floors would require little effort in the upkeep. And so on indefinitely. But how many want to live in a cement world?—*Spokane Spokesman Review*.

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

President A. M. Henshaw, of the New York Florists' Club, has appointed the following as the club's committee on nominations of officers for 1921: C. B. Weathered, W. A. Manda, Richard Hughes, Max Schling, Emil Schloss, W. H. Siebrecht, Sr., and John Canning.

A SUCCESSFUL PICNIC

Gardeners' and Florists' Club of Boston Holds a Largely Attended Outing

The annual picnic of the Gardeners' and Florists' Club of Boston, at Cunningham Park, July 23, was one of the most largely attended and most successful events of the kind ever held. The day was perfect, being warm enough to suit everybody, and yet not too hot to make the sports enjoyable. Among the 500 people present during the day were several visitors from Maine, Rhode Island, New Hampshire and New York. Refreshments were served, and a long program of sports carried out.

In a baseball game between the private gardeners and commercial florists, the former won by the close score of 3 to 2. The winning team was made up of T. S. Brown, N. Coles, A. Birkmaier, W. J. Iliffe, P. Whyte, Walter Brown, Roger Swan, J. Fred Coles, M. S. Brown.

Norman Craig's team beat Nelson Dartsch's team by 14 to 7, the winning team consisting of Norman Craig, Donald Craig, H. Fisher, W. Swan, J. Barry, C. M. Masson, C. Esty.

One of the most exciting events of the day was the ladies' ball game. The score, after 12 hotly contested innings was 12 to 11. The winning team comprised Misses E. Iliffe, S. Rogers, M. Duguid, I. Eisenhardt, Louise Eisenhardt, F. Woods, A. Brown, O. Brown, F. Taylor.

The winners in the other contests were as follows:

Quoit match—F. Cave, D. Finlayson, T. S. Brown.

75-yard race for girls over 12—Marion Iliffe, Dorothy Woods, Esther Winkler.

50-yard race for boys under 8—Teddie Tincher, Roger Pickthall.

50-yard race for girls under 8—Anna Norberg, Muriel Colby, Mary Quinn.

75-yard race for girls over 10—Margaret Taylor, Dorothy Coles.

75-yard race for boys over 10—John Wyness, Hector Donald, Eric Colby.

50-yard race for girls over 8—Dorothy Methven, Mary Douglas, Helen Ryan.

50-yard race for boys over 8—Gordon Holland, Mario Pederbini, William Donald.

100-yard race for club members 30 years and over—E. F. Norberg, A. G. Bryce, T. S. Brown.

100-yard race for boys over 12—Nelson Bartsch, Walter Swan, Norman Craig.

75-yard race for married ladies—Mrs. D. Kelley, Mrs. J. F. Coles, Mrs. H. F. Ward.

75-yard race for girls 15 years—Alice Broan, Elsie Bartsch, Edith Iliffe.

100-yard race for boys over 15 years—Roger Swan, P. Whyte, Chas. Esty.

100-yard race for club members, handicapped—C. A. Stellburger, Victor Huerlin, W. J. Iliffe.

Flag race for girls under 15—Dorothy Ward, Margaret Peterson, Doris Bartsch.

Potato race for boys under 15—Walter Swan, Nelson Bartsch, Donald Craig.

Tug of war—Privates beat commercial gardeners easily. Winning team, J. Donald, A. K. Rogers, M. S. Brown, T. S. Brown, F. Allison, H. A. Abraham, P. Lanigan, P. W. Burke, J. T. Ludwig, A. G. Bryce, J. Methven.

50-yard race for girls under 12, open to members' and friends' children—Linda Rogers, Hilda Smith, Mary Quinn.

50-yard race for boys under 12, open to members' and friends' children—Archie Will, O. Rossi, Warren Murdock.

There will be a summer field meeting at the Market Garden Station in Lexington, Mass., all day Wednesday, August 4. It will offer an excellent opportunity to learn about various experiments being made. Florists will be especially interested in the greenhouses, which have been equipped with oil burners.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

The recent convention of the Pacific coast nurserymen was unique in as much as the leading address was made by a woman, Mrs. Ruth Day. Mrs. Day presented a number of suggestions which were received with interest. Among other things she said:

"The leading things we need to consider are the stabilizing of prices, the raising of quality, the importance of publicity, conservation in growing, and cooperation among ourselves." She declared that nurserymen have a tendency to make some prices a little too high and others a little too low, so that a comprehensive basis for a cost-finding system is most desirable. She also declared that while quality can't be made perfect, it can be made much higher. This is a point, by the way, upon which emphasis has been laid at a number of meetings. The advantage of establishing a clearing house was proposed by Mrs. Day, and the suggestion met with such favor that a committee was appointed to investigate the proposal. The idea, as Mrs. Day outlined it, is to arrange a system by which nursery stock may be well balanced by transferring surplus stock from a member who has too much to other members who are in need of such stock. Just how practical this plan is remains to be seen. It seems as though it might be worked out to a certain extent, and no doubt the Associations of Nurserymen in other parts of the country will watch the Pacific coast growers to see what eventuates from their study of the problem.

Florists should find much satisfaction in the growing tendency on the part of business organizations to use flowers in constantly increasing quantities at their business meetings and conventions. A case in point was the recent Style Show conducted by the Shoe Trade in Boston. At this show an enormous number of flowers, especially carnations, were used, several thousand dollars' worth having been purchased from one concern. Conventions and shows of this kind in the past depended largely upon bunting and similar decorations to make the hall attractive. The event

just mentioned, however, was entirely different. It had for its main feature a large collection of pretty girls who sat upon the platform and displayed the different types of foot-gear. Of course, the young ladies were decked out in their daintiest dresses and naturally wore fine silk hose. Such an exhibit would lack in effectiveness if it did not have a proper setting.

Accordingly the shoe people used flowers in great profusion, creating an atmosphere of luxury and affluence. The trend seems to be in this direction, so that in the future there should be an increasing demand for flowers and decorative plants at all kinds of business gatherings, just as for social functions. This is something which should be encouraged even in the smaller cities, where suggestions of this sort from florists will often be kindly accepted by managers who perhaps have not had the idea enter their minds. There are far more opportunities for selling and using flowers than have yet been recognized.

Honest dealings and straightforward nurserymen's reputations in all lines of business have come to characterize the seed trade, the nursery trade and the flower growing industry to a constantly increasing extent. This is a happy tendency, and will be to the financial advantage of all concerned. The nurserymen are to be commended for the strong position which they have taken, but the American Seed Trade Association has adopted a similar platform, and is working to carry it through. At the recent convention in Milwaukee, the delegates, by unanimous vote, adopted a Declaration of Principles which pledged the association's support to the honest reputation of the seeds handled by the trade. The resolution is reproduced below:

STATEMENT OF PRINCIPLES

The following resolution was adopted at the Thirty-eighth Convention of the American Seed Trade Association at Milwaukee:

RESOLVED, That the American Seed Trade Association does now clearly and solemnly affirm and pledge its sincere and active support to those principles of honest representation of seeds and other commodities sold or offered for sale by catalog and otherwise by members of this association and seedsmen generally. This association believes in and encourages the enhancement of the value and volume of agricultural products by the improvement of the quality of seeds; the elimination so far as practicable of weed seeds and compliance by seedsmen with fair seed laws and regulations. Furthermore, we condemn any seedsmen as unworthy of membership of this association whose practices violate the aforesaid principles.

One matter in this connection has been taken up by the Seed World, of Chicago, which publishes the following editorial remarks:

"As far as seed legislation is concerned we believe that seed laws are a good thing, provided they do not interfere with commercial transactions and their provisions are such as may be complied with. It is to be regretted that we have some state laws that have been drafted by persons unfamiliar with seeds, practical testing and labeling methods. Seed legislation should be constructive, should have for its purpose the benefiting of agricultural conditions, and should not be framed for the purpose of restricting trading between producers, the trade and consumers, as the wording of some laws seem to indicate. We think that the large majority in the trade will agree with us that fair seed laws are as beneficial to the trade as they are to farmers."

AMONG THE SPRINGFIELD, OHIO, FLORISTS

The retailers report business very good but they have not got together on the Sunday closing as yet.

The wholesalers are still busy, and at this writing, the middle of July, which is unusual and goes to show that stock which is needed is not plentiful as in the years gone by. Some of the growers have all or part of coal in and have paid as high as \$8.85 per ton on track here for it, but the writer does not know of a single retailer who has his coal, although some of them use gas all the time, and some only part of the time.

Planting out with the wholesalers has been successful but help was short and that has been the case all along for the past three years.

Gustave Schneider is now getting in shape again after his fire on April 9th. Two houses and potting shed are now completed and in use, also the large service shed. The other three houses are going forward nicely with some of the benches up, and all the mill work now painted, also two gutters in place.

Among the wholesalers, B. C. Blake is putting up another house 20 x 80, to take care of his ever increasing trade. The potting shed is completed and half of the roof bars are in place.

J. Oliver Chick is also making improvements; one house 14 x 90 is ready for roof bars and two others 22 x 125 and 10 x 125 are contemplated this fall. An addition to the service shed is completed, which is 16 x 30, two stories.

The Good & Reese Co. are building a large concrete and steel boiler plant and putting in two 80 h. p. boilers, which will be equipped with iron stairs, electric hoist for ashes and up to date in every way, having fifteen traps to dump coal into the cellar and a large new stack which will take the place of the two old stacks and two cellars and three boilers, which were in them.

Harold McGregor sold his interests in the McGregor Bros. Co. and is building a plant to grow hardy shrubs and geraniums. He expects to have his house ready by September 1st.

The Springfield Floral Co. are rebuilding the entire south side of their place which has not been used for several years. This comprises nine houses 20 x 80 ft. each, which will give them double capacity of the last several years, also remodelling the service and potting shed.

ABNER HOOPES

Founder of West Chester Nursery
Dies at Home There

Abner Hoopes, one of the founders of the Hoopes Bros. & Thomas Co., nurserymen, West Chester, Pa., died in his apartment at the Mansion House, West Chester, Pa., July 23rd, after a protracted illness.

Born September 27, 1836, at West Chester, Mr. Hoopes was educated at the Friends' Central school, Philadelphia, following which he was for three years in the woolen business. In 1853 he removed to West Chester and started the firm which bears his name.

For several years he was a member of the board of trustees of the Norristown Insane Asylum. Funeral services were held Monday at the West Chester Friends' meeting, with interment in Oakland cemetery.

THE MARKET

Market prices have been picking up although it is hard to tell why unless it is because high grade stuff has been coming in slowly. The feature of the past week was the appearance of asters in fair quality. In Boston, they are selling from three to six cents, and just a little lower in markets further South. Gladioli are coming in well both as to quality and quantity. The market isn't very high as a rule, but the demand is very strong. Buyers are paying anywhere from 50 cents to \$1.50. Carnations are rather poor and sell slowly at from two to three cents. Roses are as good as could be expected at this season of the year and naturally the demand is not great. They sell from two cents up. Delphinium seems to be about out of the Boston market and proved among the best sellers of the season.

Flowers Under Glass

"If vain our toil, we ought to blame
the culture, not the soil—"

If you want Antirrhinums for early
flowering, that is, for the month of
November and December, you should
bench the plants about the first week
in August. Have them a foot apart
each way, providing the stock is grown
from cuttings, and pinch back the
shoots as they push up to flower,
allowing four or five shoots to start
from near the ground. The weak,
useless growth should be rubbed out,
for you will get better results from
three or four good spikes to a plant
than from two or three times that
number. You will need to stake the
plants to keep them erect, and should
also rub off the side growths as they
appear on the flowering stems.

Make a point to get the best sweet
pea seed that you can buy. Nothing
else will give satisfaction. For early
flowers you should put the seed in
right away. In case there is no bench
space ready, you can sow in four or
five-inch pots, setting out the plants
in four or five weeks. They will do
well in a cold frame where they can
have plenty of air, and be convenient
for watering and syringing. Keep
shaded until they come up, after which
they will need full sunlight. They
ought to have eight inches of good
soil, in any event, but if you can plant
them in a solid bed, you will be that
much better off. They must have
rich compost, whether in beds or
benches. It may well consist of
fibrous loam, two parts, and well
rotted cow manure, one part, with a
little bone meal added. Give them
supports just as soon as they show
signs of climbing.

Do not neglect your Lorraine be-
gonias. They need a place close to
the glass, but one which is not too
heavily shaded. Shade is most needed
during the hottest part of the day,
and it is advisable to use a lattice
which can be removed between three
and four o'clock in the afternoon. Of
course they can be left off entirely on
cloudy days, and nine o'clock in the
morning is early enough to put them
on, even on fair days. This sort of
treatment gives very stocky plants by
fall. Before they become pot-bound
they should have a shift, and you can
get good results with a compost con-

sisting of fibrous loam, leaf mold and
well decayed cow manure in equal
parts. Wet down the paths to keep
the air moist, and as soon as the
plants begin to crowd, give them a
new stand with plenty of room, be-
cause they need light and air. While
ventilation is required, it should be
given carefully enough to avoid sud-
den changes of temperature.

Old rose plants that have just been
cut off and planted again in the
benches will need all the care you can
give them to bring them to their first
growth, although after that they will
be easy to handle. Have plenty of
well decayed manure in the soil as
these roses will require more feeding
than young plants

CHINESE ROSES

The severe winter like that of 1917-18 has injured several of the Roses of western China, although apparently none of them have been killed. Rosa Helenae, the handsomest perhaps of the Roses discovered by Wilson, has lost much of its wood and will not flower this year; and Rosa multibracteata, which has not been injured before, has been killed to the ground. The Chinese form of Rosa Roxburgii (var. normalis), which flowered last year for the first time in the Arboretum, has had no flowers this season, although the wood has not been much injured. Rosa Moyesii has been little injured, but has flowered very sparingly and in the Arboretum has never lived up to the reputation it has gained in England. Rosa Hugonis was not injured by the winter, but it did not produce quite such a large crop of flowers as in previous years, and one exceptionally hot day nearly ruined these just as they were opening. No new development among roses shows that the beauty of the flowers of Father Hugo's rose is equalled by that of any other Chinese species. Uninjured by the cold of the past winter, the form of Rosa Multiflora from Western China (var. cathayensis) has not before been more thickly covered with its pale pink clustered flowers. This rose can be grown as a bush with long arching stems as it appears in the Arboretum, or it can be used successfully to cover a large arbor, as it has in another Massachusetts garden. The flowers are as beautiful as those of most of the popular Rambler Roses of garden origin, and the plant is hardier than many of these roses. To the students of roses this form of Rosa Multiflora is of interest as the wild type from which the Chinese obtained the popular "Crimson Rambler" rose which for centuries before it was brought to this country had been a popular garden plant in China. Rosa Bella, introduced by the Arboretum from Northern China into Western gardens, has never been injured here by cold. It is a tall stout shrub which produces every year in June great numbers of large rose-red flowers followed by showy fruits. A good garden plant for cold countries, Rosa Bella might in the hands of a skilful plant-breeder have a useful influence in a new race of hardy roses. The winter has not injured Rosa Caucasica which promises to be one of the most useful of the Western China roses. It is a Cinnamon Rose and a vigorous growing shrub now more than six feet high, with stout arching stems covered with stout spines, handsome foliage and flowers two inches in

diameter with pure pink petals marked with white at the base. The broad flower-clusters sometimes contain as many as 25 flowers, and as these open gradually the plant remains in bloom during at least a couple of weeks. The value of this rose as a garden plant is increased by the fact that it is one of the few roses in the collection which

flower in July, and that its large orange red fruit is exceptionally handsome. Rosa Omelensis was not hurt during the past winter, but the form of this rose (var. pterocantha) with the items furnished with large, bright red translucent spines lost considerable wood in the shrub collection.—Arnold Arboretum Bulletin.

The cards issued to all members of the Society in good standing admit such members to the Trade Exhibition and the Convention Floor, and to all functions and entertainments in connection with the gathering. Florists not yet members can take out memberships at the Secretary's office in Convention Hall by payment of the yearly dues, which are \$5.00, and receive cards at the same time.

MEMBERS WHO HAVE NOT PAID THEIR 1920 DUES AND ARE DESIROUS OF HAVING THEIR CARDS IN ADVANCE OF THE CONVENTION, SHOULD MAKE REMITTANCE TO THE SECRETARY NOW.

The Convention Program is most interesting and provides for discussion of many subjects of vital importance to the florists' industry.

Take a few days' vacation and join your brethren in the trade at Cleveland, exchange ideas, and profit by what you see and hear—it will do you good.

Secretary

RAMBLING OBSERVATIONS OF A ROVING GARDENER

It is pleasant to find a growing disposition on the part of nurserymen as well as the owners of private estates to open their establishments to the public, and even to invite their attendance by advertisements in the papers. Growers of peonies and iris have found people flocking to their places in great numbers this season, and new pilgrimages are being planned by flower lovers to the farms of gladiolus growers. Later, no doubt, the grounds of dahlia growers will be visited the same way. J. K. Alexander, the well known dahlia expert of East Bridgewater, has arranged drives through his fields so that the owners of automobiles can witness the display without leaving their cars. B. Hammond Tracy, at Wenham, Mass., always has a great many visitors to see his new and rare gladioli, which flowers are now just coming into

bloom. Judging from the interest which is being shown in the gladiolus this year, the coming show in Boston will be largely attended and prove one of the most successful ever held.

I have been interested to find that the box barberry is growing in many gardens this year. This plant, which has been put out in great quantities by the Elm City Nursery Co., of New Haven, Ct., seems to have met a real need, notwithstanding the fact that it is not evergreen. Apparently the plant stands the extreme exposure of the middle northwest remarkably well. A letter from a nurseryman in Topeka, Kans., says:

"The weather is very hot and dry here during the summer, while the temperature occasionally reaches 14 degrees below zero in winter. Yet the box barberry has done very well,

even under these adverse circumstances." I understand that a large grower in Rochester, N. Y., is planning to border his entire rose garden next year with the box barberry. This should create a very pleasing effect. To get the best result from the box barberry the plants should be set four to six inches apart and kept trimmed. Then it produces a low hedge which is remarkably well adapted to formal gardens. I expect to see it used much more widely in the future because of the large buying being done by nurserymen.

I am pleased to learn that Mr. E. C. Vick, secretary of the American Dahlia Society and also the American Sweet Pea Society, has been made garden editor of the New York Globe. Mr. Vick built up an enviable reputation while he was editor of the garden section of the New York Sun, his weekly page being very widely read. With the constantly growing interest in gardening subjects among amateurs, it is not strange that the daily papers find it advisable and profitable to cater to the interests of these people.

PROFIT SHARING FOR FLORISTS

R. C. Kerr Tells How the Plan is Operated in His Establishment

Everybody knows that R. C. Kerr of Houston, Texas, is making a great success of his business. He is president of the concern known as Kerr the Florist, of the Robert C. Kerr Co., of the Kerr Nursery & Plant Co., and of the Glendale Nursery Co. He is a man of big affairs and a broad-vision. At the Convention of the Texas State Florists' Association last week, Mr. Kerr, presented a paper in which he reveals some of the most important reasons of his success. This paper should be read carefully by every florist. It follows:

Profit-sharing is another step forward. It is money in our pockets. If we adopt the profit-sharing plan each employee realizes when he wastes stock he is participating in that loss, if he fails to give good service and the store loses a customer, he is participating in the loss, in making up a design or bouquet and he is wasteful in the material that he uses, he is participating in another loss, or, if he is making up a design or bouquet and is economical in the construction of the work and also is very careful to see that it will come up to the expectations of the customer, he is partic-

ipating in the profits. It is human nature for employees to be more interested in the work of a concern if they know that they are interested in the profits, whether they be large or small. Nine cases out of ten where a concern has labor troubles, it is their fault and not the fault of the employees.

I was asked to accept a place on the program, and the reason why I selected this subject was because this plan is uppermost in my mind, and is producing wonderful results in our own organization. I have had the profit-sharing plan since the first of January applying it to the heads of each department, and from July 1 of this year, it will effect every employee in our retail store.

There are several things that are essential: First, you must have an organization. By that I mean employees who are satisfactory, and who have a desire to build up a big organization. If you have unsatisfactory employees, it makes no difference what you offer them, they are dead to the world, and you will lose time and energy to try to place them. So it is my experience that if you decide to enter upon a profit-sharing business, you should weed out and get only the best.

To my way of thinking there is only one true profit-sharing basis. A plan to get results must be of such a nature that every employee participates in the actual profits of the company, and then it is up to them to deliver the goods. Lay your cards on the table if you are proud of your business, and let the other fellow know how you succeeded. When the Commercial Agency asks for a report of your business, if it is a good one you are proud to render it; if it is a bad one you sometimes hesitate and may fail to render it and are therefore put in the wrong class.

Do not try to make a secret of the actual profits of your store. Render a monthly profit and loss statement. Have your monthly efficiency meeting. Talk about the statement. If one particular line showed an unusual profit, find out how you did it. Apply the same methods to the other departments that are not so profitable. Talk with the head of the delivery department, and if the maintenance of this department is unusually high, investigate it thoroughly and find out why. The bookkeeper should submit a list of customers who are slow payers and discuss ways and means with all of the employees and the best way of getting the money.

The sales manager should discuss ways and means of increasing the sales of the store. These monthly efficiency meetings are one of the most wonderful things that we have instituted. Let your business be an open book with your employees. It will instill confidence and make them deeper interested in your welfare.

I am going to give you our working plan for what it is worth. I am not giving this to you as a model plan, I think there is much room for improvement, but I believe we have taken a step in the right direction. Our retail store is operated by what we call the central organization, composed of myself, as proprietor, sales manager, superintendent of service and credit manager. Four in all. The heads of each department are held responsible for their respective work, and are expected to show results at the end of the year. This plan has been in opera-

Seed Growers Philadelphia

tion since the first of the year and I wish you could realize at this time what the marvelous results have been. I wish that I could impart to you the intense interest manifested in the net results at the end of every month. And there is only one thing that gets the results, and that is the employee participating in the profits.

I am also going further, and give you the percentage in order that I may give you an idea as to how we make our dividends. Myself 75 per cent, sales manager 12½ per cent, superintendent of service 6¼ per cent, credit manager 6¼ per cent. As a barometer to conditions of business, a monthly statement showing disbursements of the month. The employees participate in the net cash profits. All accounts must be paid, after this is done a division is made in the above proportions leaving a reasonable cash balance. What ever amount is agreed upon by the central organization, that agreement of profit-sharing was started January 1, at which time the starting point was established to make the amount of bills owed by the store and the amount of accounts on the books balanced.

There is one little feature in this proposition that is fair and reasonable and it puts us in a position that we know how long that we will have an

organization intact, and that is, it is agreed by all parties that in any event I may want a change in the above plan, I will be given six months' notice. It is also agreed that every employee give six months' notice in case they withdraw from the organization. The failure to give notice in case they withdraw will forfeit the accrued profits on the books and some other penalties that we have agreed upon. In the case of dissolution on this plan, only the accounts on the books and not merchandise on hand will be considered, as that eliminates complication and simplifies matters.

When I entered into this agreement I did not invoice the stock on hand, but only consigned the bills payable and bills receivable, as it is rather a hard thing to arrive at a profit on merchandise in the store. As a matter of fact, the profits are not profits until you have cashed in.

We also make a provision for branch stores that we might see fit to organize. If any member of the central organization is made manager of the branch, he or she will maintain one half of the original per cent in the organization, and in addition will participate to the extent of 15 per cent of the profits of the branch store based upon the above plan. However, all profit-sharing and bonus checks

paid out by the branch and central store shall be treated as an overhead expense, and the central organization will then be paid accordingly.

As stated, the above plan from January first to July first only effected the heads of the departments. Beginning

July first every employee will participate on the following basis.

Whatever net per cent that our store earns every employee will receive the same per cent of their annual salary. For instance, if we earn 10 per cent net profits based upon the cash realized, and an employee earns \$1,000 per year, that employee will draw a bonus of \$10. This effects every employee in our establishment, from the porters up. This plan puts them on notice that it is up to them. Take for instance the truck driver, it is up to him to see that he is polite and courteous to every customer, for if he fails to make a satisfactory delivery, or should disagree with a customer, and we lose that customer it effects his pocketbook. If he makes prompt delivery and makes a pleased customer, he benefits thereby. The store porter will realize that is up to him to see that the store is kept in trim order and see that the floors are kept swept and the windows in order, and all other little necessary details. If he fails to contribute his pro rata to what goes to make a profitable concern he will fail to derive his share of the profits and vice versa.

I will say that this plan is a success up to the present time, and I am confident that it will prove a success to you in your business. Personally, I feel that the benefits derived from this plan will justify us in perpetuating it as long as we are in business. It is the best investment that I have ever made.

Now just a word or two regarding our organization as a whole. I will first enumerate the responsibilities of the heads of the departments. The sales manager is responsible for the conduct of the store as a whole, also, in addition to this he devotes his attention to the development of sales which embodies advertising and service.

The service manager is held responsible for the delivery of the goods, and all details pertaining to deliveries. The credit manager, which also embodies the bookkeeping department, is responsible for the handling of accounts and collections of all bills and the bookkeeping, and is held strictly accountable to the central organization for the work. We have our business divided into four parts: First, the growing of flowers is conducted by a corporation composed of stockholders of prominent business men. This is separate from the retail store. We buy from this concern the same as we buy from anyone else. The superintendent of growing is held strictly accountable for the affairs of this plant. We are just entering into

IMP SOAP SPRAY

Sure Insect Killer

IMP Soap Spray is a scientifically prepared compound that is destructive to insects without injuring plants or roots. Does not spot leaves, fruit, grass or deface paint work. May be used on fruit trees; shade trees; flowering shrubs; vines; garden truck; and on all sorts of plants, both under glass and out of doors.

It is most effective against rose bug; mill bug; white, black, green and rhododendron fly; red spider; thrips; aphids; fruit pests; elm leaf beetle and moths. Very economical, one gallon is mixed with 25 to 40 gallons of water. Full directions on each can. Order direct if your dealer cannot supply.

I am giving you an outline of the work of our organization as a whole, and I am pleased to report at this time that it is producing very satisfactory results. It is one that I have been working on for seven years, and I have just now accomplished the desired results. I am giving you this information for what it is worth, and I will be glad to receive any suggestions from any of you as to how it can be improved upon. Let us exchange ideas. There is always wisdom in the multitude of council, that is the only road to success.

Miss Anna O'Connor, of Johnson Bros., Providence, R. I., is planning for a trip to England, France and Belgium, sailing early in August.

the nursery business, and are conducting the business the same as the florists business, and the growing manager will devote his entire thought and energy to nothing but the growing of stock.

We are opening a retail nursery yard and display grounds, and the manager of this department is expected to devote his entire energy and time to selling nursery and bedding plants. In other words, our growers

are not confronted with problems of the retailing of their stock, and the central organization is not confronted with the growers' problems.

This makes four organizations, four separate bookkeeping systems, everyone working within itself and not depending upon the other.

I am of course the head of the four organizations. I draw a salary from each organization the same as the other employees.

Little Ads. That Bring Big Returns

Little Ads. in our Classified Buyers' Directory bring big returns to both advertiser. Anything wanted by florists, gardeners, park and cemetery superintendents, etc., can be sold through this medium. Don't fail to read over these Ads. in each issue and you may find one or more that will prove profitable to you.

This is an interior of B. G. Willig's big 72 foot house at Poughkeepsie, N. Y. Note the criss cross bracing; also the braces going from gable to ridge and from gable to the first column and so on into a concrete footing in the ground.

Note the sturdy gable rafters with a gable purlin at the top of the same size. Observe that the ridge brace is secured directly to the same purlin. See the strength and frequency of those intermediate angle iron purlins.

Most Gables Cause Most Glass Breakage

When the wind strikes the roof full broad side, its force is greatly lessened by sliding up the slant and off into space on the other side.

But with gables it's different.

The full force of the full wind, strikes them at times, full on.

There is no sliding off.

It's just like one huge sledge hammer blow. Unless gables are rightly framed and then interframed with the main frame of the house—those terrific blows rack the entire frame

Such constant racking, gradually but surely loosens the roof glass.

"Pooh! Pooh!" you say, "Hitchings brace their gables needlessly."

To which we answer, that if doing what you think is needless, prevents needless glass

loosening and slipping, then we have a notion that we better keep right on doing that needless thing.

But to get back to basic framing facts, we frame our gables and roofs so that all strains are so far as possible, equally distributed over the entire frame work.

In comparison, Hitchings framing is quite like a wheel, no one spoke of which bears the load.

The strain and the load weight are both carried by the spokes to the rim and tire, which in turn distributes it back again to the spokes.

After all is said and done it therefore figures down to whether the extra gable bracing we use is better than having loosened glass. You know we go anywhere for business. Or to talk business.

National Publicity Campaign

It is always pleasant to be able to record a few cheery words accompanying a subscription to the Publicity Fund. Our committee do not look for bouquets, but they are human enough to cherish the many little expressions of appreciation of their work which of late have been coming in. Moss W. Armistead, the Portsmouth, Va. florist, in sending in a subscription says:—"I have no hesitation in saying that I fully believe the campaign to have been worth much more than this subscription to us, and I sincerely trust that no idea of dropping it will be entertained for one moment. In the fall I expect to send in another contribution."

We have often referred to the importance attaching to these additional subscriptions. Surely, a period of good business might be considered enough inducement to cause a doubling up on the part of a good many subscribers who at some time realize that their support has not been commensurate with the benefit resulting. We have in mind some subscribers who have doubled up more than once. They have the courage of their convictions, and do not look around to see what their fellows are doing. They have faith in our work, and on such faith we can build. Contrast them with those who hold aloof from the campaign, perhaps through distrust. "Our fears do make us traitors," says Shakespeare in "Macbeth." There should be no fears when considering a subscription to the Publicity Campaign. We passed the experimental stage long ago. Very many in our business have positive knowledge that our campaign is producing the benefit expected from it. We have a slogan worth all the money we can devote to it. It's the best slogan ever devised for the purpose of our industry, and is a message of suggestion, acceptable to those to whom it is conveyed—four simple words, but a wealth of suggestion.

On Wednesday afternoon, August 18, "Publicity" is to be the subject for free and open discussion at the Cleveland Convention. Official reports covering the campaign will be presented, as well as plans for a continuance of the campaign in a vigorous manner. If you have not already subscribed to the Publicity Fund, why not do so now, so that your name will appear on the Roll of Honor which will be the basis for action at the convention. We need your support, and you need the benefit to

JOHN YOUNG, Secy.

43 West 18th Street,
New York.

We have been fortunate in securing as a speaker at the Convention session on Wednesday afternoon, August 18th, which will be devoted mainly to the Publicity Campaign Mr. S. R. Latshaw, advertising director of the Butterick Publishing Company, publishers of Delineator, Everybody's Magazine, Woman's Magazine, Romance, and other well known publications. He is an expert in publicity and in institutional advertising, and a noted speaker. He returned recently from a trip to the Pacific Coast, where he made quite a study of association advertising, even sitting in some of the board meetings of these associations. He is well known in Cleveland; the Secretary of the Cleveland Advertising Club recently wrote to the Secretary of the Advertising Council of the Chicago Association of Commerce, who was in quest of speakers, that Mr. Latshaw had made the biggest hit of any of the speakers last year who spoke before the Club. This gentleman, with Major O'Keefe will be a pair of speakers at this session whom everybody will be delighted to hear.

JOHN YOUNG, Secy.

THE S. A. F. CONVENTION

Cleveland, Ohio, August 17, 18, 19.

The Secretary of the Society, arrived in Cleveland on July 27th, where he will remain until after the Convention. His first day was devoted largely to a conference with Vice-President, F. C. W. Brown and Director H. P. Knoble, at which details in connection with the gathering were discussed.

While every effort has been made to arrange for the holding of the Convention sessions in the Exhibition Hall, conditions render this impossible, and it has been decided to hold all meetings in the ballroom of the Hotel Hollenden, only three short blocks away, in a direct line, and less than five minutes walk. The second floor of the Ninth Garage will be used for the Trade Exhibition instead of the third floor as originally planned, and the change is advantageous, as floor arrangements provide for a better display of exhibits.

Exhibits not yet forwarded should be shipped consigned to the Exhibitor, in care of the Convention of the Society of American Florists and Ornamental Horticulturists, Ninth Garage,

THE ST. MARTIN STRAWBERRY

WITH A NEW RECORD

The Newport Horticultural Society has just awarded it First and Second prizes, and a Silver Medal, making seven consecutive years of prize winning for this now famous Strawberry.

Potted plants during August and September at \$5.00 per dozen.

LOUIS GRATON,

Whitman, Mass.

Originator and Introducer

St. Clair Ave. and East 6th St., Cleveland, charges prepaid. An arrangement has been made with the Garage management to store any shipments that may arrive before the Convention, at a nominal charge.

Everything points to a most successful convention, especially in point of attendance. The entertainment to be provided will be quite in keeping with the importance of the gathering.

On arrival at Convention Hall, members should register at the Secretary's office. This is most important. Cards for admission have been issued to all members in good standing. Members not yet in good standing for 1920 can facilitate matters if they will send in their cheques for the \$5. annual dues, now, so as to receive their cards ahead of the Convention. All cards must be shown at the entrance gate.

Any exhibitor having an exhibit or part of an exhibit which it is desired the Judges should pass upon, should send in to the Secretary a description of same as far in advance of the opening date as may be convenient.

Great difficulty is found in the way of procuring office desks for exhibitors, but flat tables will be provided in place of them to the extent possible. Arrangements are being made to supply "horses" and table tops suitable for use as exhibition tables, which, it is expected, may obviate the necessity of meeting high charges of carpenters and others.

Copy for signs should be sent without delay to the Secretary, care of Hollenden Hotel, Cleveland, so that the same may be in readiness at the time of staging exhibits.

JOHN YOUNG, Secy.

L. J. REUTER CO. *Plant Brokers* 15 Cedar St., WATERTOWN STA.
BOSTON, MASS.

Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

Edward H. Flood, our distinguished ambassador to the glass manufacturing centers of France and Belgium, writes from London, July 13th, advising the world at large that all is well. He says nothing about the glass business and takes three sheets of the Old Colony Club's fancy notepaper to tell nothing, which is some record. He was walking down the Strand one morning when, who does he meet but Howard Earl of Philadelphia. Both of them nearly dropped dead with astonishment. After a while sanity was restored and there was an adjournment to the Norfolk, the Savoy and the Old Colony and much talk and well, well and my goodness and how delightful. So you see you will have to wait a bit for that report on the foreign glass situation which I have been promising you these past few months. Dear ol' Lunnon! A most delightful place. It's our friend Ed all right!

The old 49th street range of Craig greenhouses were slated to stop July 15th but by the display of a little Scotch-Quaker generalship, Robert Junior got another six weeks' extension from the building contractors in exchange for a few mosquito screens to keep those birds out of the dwelling house so the workmen can sleep nights. About one-half the range has now (July 29) disappeared, part to private purchasers and the rest to Norwood. By September 1 the old range will be a thing of memory and some wonderful memories cluster round the old place.

But that is a story in itself and we must not touch on it at present. Look out for Craig at the convention and be sure and call any time you are in Philadelphia.

Edward H. Flood sailed for New York on the S.S. Kroonland from Antwerp July 28

Howard M. Earl sailed for New York on the S. S. Imperator from Liverpool July 31.

Parker Thayer Barnes of the Pennsylvania Department of Agriculture attended the Entomologists' meeting at the Academy of Natural Sciences in Philadelphia on July 29.

Bogges & Davis have taken over the Smith range of greenhouses at Newtown, Bucks Co., Pa., entering possession August 1. Mr. Davies was manager of the Richmore Greenhouses at Wallingford, Pa

Elmer J. Weaver will move his bee colonies from Chester County to their summer quarters in Delaware County, in the vicinity of Hog Island. He has been fortunate in securing a very favorable location, where the honey plants are plentiful in the vicinity, and expects to reap a rich reward in sweetness and dollars.

Miss Katherine Bogan of Michell's is back on duty this morning (August 2) after a five weeks' nip and tuck with the old gentlemen—a good part of which was spent in the casualty ward of the hospital. The accident was sustained in an auto collision near her home at Norwood, Pa., and several other people were injured at the same time. We congratulate Miss Bogan on her lucky escape and trust she will soon be completely her good self again.

DOUBLING YOUR CAPITAL

Some of the florists are getting up now and then, some advertising copy which has considerable merit to it, and who might to the mutual advantage of all concerned, send them to our trade press for re-publication, and through this effort give your fellow florists something different that will be reciprocal later on.

For every suggestion you give, you will get back dozens. And this reminds me of what one of our sages recently said:—"If you swap a dollar, you still have only a dollar, and the other fellow still has only one, but when two men exchange ideas, they both double their capital."

There are many good thoughts, suggestions and incidents occurring daily that would be worth while "copy," so pass it along and progress by the interchange.

Our "Say it with Flowers" campaign has succeeded by co-operative effort, so, will the above suggestion act to the end that others will be encouraged to further ideals and higher aims.

HENRY PENN, Chairman,
National Publicity Campaign

OBITUARY

Mrs. Mary A. Nickerson, wife of William L. Nickerson, the well known florist of Framingham, Mass., is dead at her home in that town. Mrs. Nickerson was born in Wales, 80 years ago, but her family has lived in Framingham for nearly half a century. Among the four children surviving her is William R. Nickerson, also prominent as a florist.

HORTICULTURE

Vol. XXXII

AUGUST 7, 1920

No. 6

THE TALK OF THE TRADE

The July Bulletin of the S. A. F. gives the full program for the Annual Convention to be held in Cleveland August 17-19, and there is no doubt that the delegate who goes there with the intention of getting all that there is in the way of business will have plenty to attend to. Quite often we hear a brother florist say that he doesn't take in the conventions, because it is only a trip for a good time and he can have a good time in his own way without going a great distance and traveling in the heat, and a few other reasons thrown in for good measure, but any florist who stays away from a convention because he thinks it is only a good time is making a mistake. We can all make the convention whatever we want it to be. If we want a trip and don't want to bother ourselves much about business, there is nothing to stop us from attending the convention, seeing the country and having an enjoyable time among men of our own kind; but if you want to know what the S. A. F. is doing for every florist, and want to help in your way to make the S. A. F. strong and able to accomplish more, go to these conventions and you will find them mighty interesting. The meetings are full of business and there is plenty of opportunity to spend one's time at these meetings where good discussions are brought out and solid business transacted. Just read over the program and you will become convinced that the conventions nowadays are business affairs and planned for the object of good for all in the industry.

I notice that there is a discussion planned on the second day of the convention on "A Standard Grading for Roses." This subject has come up a number of times without making a great deal of headway, but I believe there would be a lot of good accomplished if a standard grading could be accomplished. One grower after another uses his pet way of grading his stock and naming his different grades, with the result that the buyer outside of the market is unable to know with any degree of certainty what the grade of roses will be when he orders from

these different names. Fancy, Extra Fancy, No. 1 and No. 2 and other ways of specifying of a like nature are very indefinite. Personally I believe that the method adopted by a number of Boston growers is the nearest correct that is to be had. It is either a No. 9 or 9 inch, meaning a rose with a 9-inch stem, and so on, 12, 15 and 18-inch. The out of town buyer would know with this system what length of stem to expect. I think it would be a great help to everyone if a standard grade could be adopted.

Another discussion set for Wednesday, "Is Uniformity in Prices Possible?" should be a very interesting topic and there is room for a lot of deep thought. If any satisfactory arrangement can be brought about whereby prices may be a little more uniform than at the present, it is going to accomplish a lot of good for every single person in the business, and there is no reason in the world why this cannot be done. That will be a matter for consideration by the National Flower Growers' Association.

Under Notes and Comments on Page 165 of the July S. A. F. Bulletin is a very interesting article containing a recommendation by Prof. L. C. Corbett, Horticulturist in charge of the Bureau of Plant Industry, United States Department of Agriculture. It hints upon a subject that is vital to everyone; namely, coal, and in this case brings out the particular point of efficiency in heating. Prof. Corbett states that "the greenhouse men in general are on the average getting something like 50 to 60 per cent efficiency out of the fuel which they use," and as he states, this is an indirect way of stating the handicap under which the florist is working. He recommends that a study be made of this subject, learning what particular kind of fuel, boiler, arrangement of heating pipes, etc., are the best for efficiency in heating. If something can be worked out along these lines, it will be of tremendous benefit to all greenhouse owners.

Advance orders for Mr. Strout's yellow carnation, Maine Sunshine, have been so heavy, that it is very evident that he will have to lay his plans carefully in order to produce cuttings sufficient to take care of the call, and Mr. Strout evidently means to be in such shape this coming winter that he can fill all orders and in good season. A new house has been erected in which this carnation will be planted. Plans are laid for heavy propagation, and judging from present indications, 150,000 cuttings will not cover the demand. It is surprising the way this carnation has been received. Not only the city stores, but the outlying towns are calling for it and continue to call for it, even into August. It certainly is a fine warm weather variety, as well as the rest of the season. I saw it the last of July and it still had beautiful color and good size; in fact, fully as large as Benora at that time, and we all know how well Benora does in warm weather. Mr. Strout is going to carry over an old bench of Maine Sunshine, also Laddie, for propagating purposes, and this old stock was in fine shape. The cool nights in that section of New England are of great advantage certainly, as his carnations were in better shape than what one can see further South.

Mr. Strout also has a fine block of cyclamen, all grown in cold frames out of doors, running from five-inch into six, seven and eight-inch pans. I was surprised to see cyclamen grown on this place, but I can tell you that they were mighty well done and will be welcomed by the stores in his section of the country.

The market seems waiting for gladioli and the first offerings were seized upon quickly. Apparently the public is just as eager for these flowers as ever, and they show disposition to seek out the newer varieties. Mr. E. A. Woods of Newtonville, Mass., had some very early glads which he forced in frames. I saw some extra good specimens in the store of Henry Penn of Boston. Probably this plan of forcing bulbs in cold frames would hardly pay on a large scale, but it seems to be profitable in a small way.

It is seldom, I understand, that John C. Chase of Derry, N. H., misses a meeting of the Pacific Coast Association of Nurserymen, if there is any way of his getting there. In any event, Mr. Chase is just back from the eighteenth convention, which was held at Spokane, Washington, early in July, and says that it was a very live affair. The convention was of special interest because the president who was just completing one term was a woman, Mrs. Ruth Day, of the Overman Nurseries. Of course it is a new departure to have a woman occupy such a position, but according to Mr. Chase, the results justified the innovation in every particular, as President Day presided with dignity and kept the meeting right up to the mark. Some of the schemes which she advocated have already been discussed in *HORTICULTURE*, and Mr. Chase says that they were received with great interest, especially the one for having a clearing house to keep stock well balanced among members. Mr. Chase says that some interesting addresses discussed, the cost finding system, and Idaho's plan for raising and distributing trees at cost.

He also said that the Park Commissioner, John J. Duncan, who was formerly at the Arnold Arboretum, in Jamaica Plain, was made an honorary life member of the association. Mr. Duncan has become very popular in Spokane, and his work is highly appreciated.

F. H. Burtlehaus, of Sumner, Wash., was elected president and C. A. Tonnason of Tacoma, secretary-treasurer. Mr. Tonnason is a prominent figure at all the conventions, as he has held the two offices to which he was re-elected for seventeen successive years.

The convention next year is to be held in Seattle, and the members are already looking forward to a pleasant and profitable occasion, Mr. Chase among the number.

THE S. A. F. CONVENTION

I often wonder whether retail florists generally attach the importance they might to the annual Trade Exhibition of our Society. I do not mean by this, that they do not attend it, for we have always a big following of retailers at these conventions. What I really mean is, why do not more retailers make it a point to be in attendance, to see what is presented for the advancement of their end of the business.

There is another advantage in attendance now, one which did not exist until within recent years. Retail flor-

ists at our conventions now like to meet others of their kind there, florists from the different cities where, perhaps, many orders are required to be filled in the course of a year. The exchange of orders by telegraph results in business which in volume is most remarkable. Our Trade Exhibition furnishes a splendid opportunity for florists anxious to do business of this kind to meet others equally anxious. It is like killing two birds with one stone. I hope many of the Eastern retailers will give thought to this, for I really believe that their Western brethren better realize our convention possibilities.

There are many subjects on our program this year of interest to retail florists, and we shall welcome a larger representation from retail ranks. August is the best time of year for a retail florist to take a vacation, and the convention furnishes a splendid object for a journey to Cleveland, in itself a city worthy a visit by any florist. Lay down your cares for a few days and arrange to be in the Convention City on the opening date, August 17. Enjoy the hospitality of your Cleveland brethren, and return home refreshed with the feeling that you have made a trip productive of benefit to your health, and increased interest in the business you have chosen for your life's work. You need not go alone, take your wife along with you, for she, perhaps, needs a change as much as you do, and likely as not, shares your worries and counsels you in the conduct of your business. We are a happy lot at our conventions, come to Cleveland and enjoy meeting with us.

A. L. MILLER, Pres.
Jamaica, New York.

THE S. A. F. CONVENTION TRAVEL ARRANGEMENTS

It was expected that with the turning back of the railroads to their respective managements, we should be able to enjoy the privilege of traveling to Cleveland at the rate of one fare and one-third for the return trip, as we did in pre-war days. Our Society made the necessary request for this privilege, but it was denied, for the reason that the reduced rate now is available only to organizations, which are in character educational or philanthropic. It does not seem likely that business organizations will, at least in the near future, enjoy concessions in railroad rates when journeying to their conventions.

Well, who should worry! The rates to Cleveland are not such as to keep any florist at home who has his business at heart. Anyone attending the

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00
PRINCESS OF WALES ..	10.00	95.00

C. U. LIGGIT

Wholesale Plantsman
Bulletin Building PHILADELPHIA

Convention who keeps his eyes and ears open will not give much thought to his railroad expenses, he will be glad he paid them and let it go at that. Both railroad and hotel rates are reasonable as we must look at things today, and the little change of surroundings for a few days is worth really more than we have to pay for it.

The Cleveland florists have all arrangements for our gathering well in hand, and every possible comfort awaits us, as well as a most hearty welcome. Members who are interested in bowling and have in mind the splendid contests of past conventions, will be pleased to know that Cleveland has a fine tournament on their program of entertainment, and the evening of the third day of the Convention, Thursday, August 19th, is selected for it. So get down to your practice all ye bowlers, you will need all your skill at Cleveland.

Don't forget your hotel reservations. Notify James A. McLaughlin, 421 High avenue, Cleveland, of your requirements; he is chairman of the care of your reservations. There are five big hotels in close proximity to Convention Hall, and we should have no difficulty as far as comfortable housing is concerned—but get your reservations in early.

A. L. MILLER, President.
Jamaica, New York.

WITH LORD & BURNHAM

Stearns W. Scott of Marshall avenue left this morning for Newton, Mass., to assume an excellent position with Lord & Burnham of New York, builders of private greenhouses. Mr. Scott is an expert in this line of work and having had similar employment with this concern was sent for by them to take charge of an important branch of their work.—*Bath, Me., Times.*

FROM BOSTON TO CLEVELAND.

Are you going to the National Convention of the Society of American Florists? Reservations must be made at once. Fare from Boston, one way, \$22.01; lower berth, \$4.59; total, \$26.60. Train leaves South Station, Monday, August 16.

Boston, 2 o'clock P. M.
Newtonville, 2.15 o'clock P. M.
Worcester 3.15 o'clock P. M.
Springfield, 4.35 P. M.
Pittsfield, 6.20 P. M.

This Convention will be of vital interest to every florist in the country. A few of the subjects to be taken up are "The Publicity Campaign," "The Coal Situation," "Organization of National Flower Growers' Association," "National Flower Show Reports" and other important topics. There will also be an unrivaled trade exhibit.

New England is not doing her fair share of this great work unless she is represented by at least fifty live wire representatives. The New York Florist Club will have an entire special train and those who wish to go by this route should make reservations at once through C. Lowther, Box 100, Times Square Station, New York City. Here's how they go:

Leave New York--Barclay St. Ferry, 10 A. M.; Christopher St. Ferry, 10 A. M.; West 23rd St. Ferry, 10 A. M.
Leave Hoboken, 10.20 A. M.
Arrive Buffalo, 7.55 P. M.
Leave Buffalo, 9 P. M. (Boat).
Arrive Cleveland, 6.30 A. M.

Take it from me, there will be something doing all the way with this bunch.

Don't forget to make your hotel reservations in advance. Here are some of the best: Hollenden, Statler, Cleveland, Winton, and Olmsted. Rooms from \$3 up. The sky is the limit.

Yours,
E. ALLAN PEIRCE,
Waltham, Mass

BOSTON

Mr. P. Welch came up from Old Orchard the first of the week and spent two busy days at the store. A number of improvements are being made which will give Welch Bros. more room and an opportunity for better display.

Mr. Henry Robinson is spending the summer as usual at Green Harbor and has with him his son, Henry Jr., who recently returned from a Western ranch where he spent several weeks renewing his health. The young man will return to Columbia, it is expected, in the fall.

Charles Robinson returned early this week from a well earned vacation at Pemberton

Mr. Charles Margolis, of the Henry Robinson Co., is back from an enjoyable vacation in Maine, and his friends are congratulating him on having added several pounds of flesh.

Mr. Henry Penn is spending the month of August in Maine, and probably will not leave his retreat even long enough to attend the S. A. F. Convention in Cleveland.

Messrs. Rogean and Noyes recently made an automobile trip to St. John. They covered 1,178 miles, and had a very enjoyable trip.

Mr. and Mrs. Edward Welch are being congratulated upon an addition to their family. It is a girl.

A. F. Hills has taken a position with J. Bolgiano & Sons, of Baltimore, entering his new work August 15. For the past seven years Mr. Hills has had charge of the flower seed and bulb department at the establishment of Joseph Breck & Sons, and has made a great many warm friends in Boston, having been with Fottler, Fiske & Rawson before he entered the employ of Breck. He will look after the seeds and bulbs at the Bolgiano store.

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Keeping records

It is always a pleasure to do business with a concern that keeps its records in a concise, businesslike way, which sends its bills the moment they are due, makes its returns with equal promptness, and seldom gives occasion for complaint because of mistakes. Would that the florists might be numbered among those of whom it can be said: "It's accounts are kept in perfect shape."

Unfortunately this is far from being the case. Many florists, and especially those who have begun in a small way and worked up to a good sized business, have never learned the art of methodical, orderly filing of bills, statements, reports, complaints and the like, and of attending to each matter the moment such attention is needed. It would be the part of wisdom, and a real economy oftentimes, for a florist who finds his bookkeeping and his accounts giving him too much trouble, or occupying too much of his time, to employ an accountant who would outline the simplest form of bookkeeping for him to follow, and start for him a set of books. To tell the truth, the day of haphazard, go-as-you-please business methods has passed. It is impossible to be successful in modern business without keeping accurate accounts, and there is no florist clever enough to carry these accounts in his head.

The florist business is growing more and more complicated each year, and there never was a time when it was more necessary to have all the details in black and white. There would be fewer hours of sweating over the desk when it becomes necessary to make income tax returns and other reports required by the government if a simplified, orderly method of keeping the accounts were installed. As Mr. Robert E. Mapes, of Baum's Home of Flowers in Knoxville, told the Tennessee Florists' Association last year:

"Statistics, figures and facts are the basis upon which every activity of today, legislative, political or commercial, is based. A florist may watch every detail of expense in his greenhouse in order to produce stock at the lowest possible cost; he may use every effort to dispose of his stock at the best prices, but if there is a weak link in the administration of his affairs, if the management of his office is not up to date, he stands a good chance to make a failure."

Now with the beginning of a new season, many a florist will find it to his best interest to overhaul his accounting system and make a careful investigation to learn whether his methods are the best which have been devised for keeping accurate tally on his business.

President Hannah made a number of pertinent Retail points in his address before the Texas State prices Florists' Association, and some of the things which he said are worth pondering, although they may not all fit in exactly with the theory of other florists throughout the country. He warned especially against a tendency to charge all the traffic will bear and a little more. His remarks on this score are worth quoting:

"Do not make haste to get rich too fast. Do not get prices too high. Keep safely on the side of public opinion. Go slow but sure. This expresses the doctrine which has been the guide of many florists throughout the country, but there have been some instances where the gouging process has been indulged in. This has never been good business, though, and the tendency has been checked oftentimes by the better sense of the florists in general."

Mr. Hannah went on to elaborate one special feature of the tendency mentioned when he said:

"One thing is seriously wrong, and that is doubling your price on Christmas, Easter, Mothers' Day and such days. I understand the retailer must because the wholesaler does. He commits the wrong, and is tempted to ship you pickled stock when the retailer holds the bag. No other commodity doubles its price in two days. Why should ours?"

There are many things to consider if the florists business is to be put on the bigger, broader basis which is the aim of the most progressive members of the trade throughout the country. Many difficulties remain to be ironed out. They are not all in the South or in the West, either. Right in Boston there is a serious feeling between certain members of the trade about transactions in the flower market. This feeling has had its effects on the local organization, and yet there is no reason why, by a proper getting together, all of the difficulties which interfere with the up-building of the business cannot be worked out. It is well to have free speaking at the conventions and at the local meetings so long as the remarks are without rancor or bitterness, and intended for the betterment of the trade. Certainly President Hannah's talk was received in the best of spirits, and he has received many congratulations.

All having gardens

How a flower garden can improve the general appearance of an industrial plant and relieve the monotonous sight of a bare landscape which would otherwise greet the eyes of its employes, is forcefully exemplified at the plant of the J. D. Crosby Company, manufacturers of wire goods, in Pawtucket, R. I., where, in a hollow square contiguous to three mill buildings is located a beautifully ordered plot containing all sorts of flower plants and shrubs, tastefully arranged in a semi-circle facing the South.

To the North lies the office and strip rolling room; on the West the machine ship and shipping department, and on the South the band rolling room. The fence inclosing the space on the East is a mass of rambler roses, a brilliant display of horticultural beauty. In the centre is a bed of red and silver leaf geraniums.

The garden was planned and laid out about three years ago by J. D. Crosby and has been cultivated by Henry C. Mahler, 73-year-old gardener, who is helped by two assistants. A greenhouse completes the garden equipment. Considerable acreage to the South beyond the plant is devoted to agricultural purposes.

We will be represented at the convention by J. H. Beckman, A. F. Eilers and D. J. Keohane, who will be glad to give any information they possess that might be helpful.

The House of MICHELL

Extends a cordial invitation to every florist, seedsman, nurseryman and others to visit their Philadelphia establishment 518 Market Street within one block of Independence Hall and their nurseries at Andalusia, Pa. 16 miles from Philadelphia.

You will find there up-to-date establishments, where a reputation for thoroughness, progressiveness and reliability has made them famous in the horticultural and agricultural world.

Our warehouses at 518 Market Street, 509, 511 and 513 Ludlow Street, are well stocked. Our nurseries at Andalusia will no doubt interest you. There are over fifty acres devoted to the growing of Hardy Perennials, Cannas, Dahlias, Roses, etc. There you will have an opportunity to see the famous "Oaks of Andalusia," one of which is reputed to be from 800 to 900 years old, and the finest, most perfect white oak in Pennsylvania, if not in the United States.

We anticipate the pleasure of your visit and personal acquaintance.

MICHELL'S SEED HOUSE, Philadelphia

516-518 MARKET STREET

GENERAL NEWS NOTES

The Florists' Club, of Albany, has had a number of accessions to its membership list of late, including the following: H. A. Tilson, Averill Park, N. Y.; W. D. Barto, Schenectady, N. Y.; John V. Honnell, Watervliet, N. Y. and James Moore, Troy, N. Y. The Club recently held a well attended outing at the establishment of James Schneider, at Rhinebeck-on-Hudson.

A new green house has been erected by Lord & Burnham for W. W. Walker, at St. Catherine's Ont., 52 x 140 feet. Mr. Walker specializes in cyclamen, ferns, hydrangeas and Jerusalem Cherries.

Smith, the florist of Providence, R. I., is now in new quarters on Washington St., opposite the Majestic Theatre.

It is understood that Spear & McManus of Hartford, Ct., are planning to make some important alterations in the building which they occupy. This will include a new front. Conservatories are to be erected on the roof to take the place of greenhouses in the rear of the old store.

Paul Jahn, of Bridgewater, Mass., is receiving the congratulations of his many friends. It is a 9½ lb. boy.

A new partnership in Chicago is that of D. E. Freres and Jack Byers, both well known in the wholesale market. They will conduct a wholesale commission business under the name of D. E. Freres & Co., with headquarters in the Atlas Block on East Randolph St.

Axel Setterberg has resigned as general manager of the Everett R. Peacock Co., of Chicago.

We are Headquarters for the BEST OF EVERYTHING IN VEGETABLE SEEDS

With our Stock Seed Farm at Grass Lake, Mich., and our growing stations in every part of the United States where seeds are grown successfully, all in charge of capable and experienced men, we are equipped for and are producing

Flowers Under Glass

If you have early planted rose houses where the plants have attained considerable size, make a point of using a little lime every night when the plants are syringed in the day time. If this point is overlooked the plants will be likely to suffer under the leaves as a result of the moist air, causing mildew or spot to develop. Make a special point of using a little lime at night after a thunderstorm in the afternoon, and always use lime in old leaky houses, following a shower. It is true that some growers claim that lime should not be used except for American Beauties, but others of long experience find it best for all roses. In any event, it doesn't cost much to apply, and some benefit is likely to result. Plants that are not well rooted should not be fed with liquid manure yet, but in houses where the roses have been grown for summer blooming, liberal doses of liquid manure can be given to distinct advantage. It is not advisable, however, to mix any strong chemicals with it, using only an abundance of cow manure. The addition of nitrate of soda and the like often causes the plants to get a little soft. Moreover, it tends to invite mildew. You will be safe, however, in adding a little bone meal to the manure.

Many florists have added to their store of shekels this year by a prosperous window box business, although this business may be developed to a greater extent than it has been as yet. Probably the most extensive job of the kind in Boston is that on Filene's store. This work has been in the hands of Mr. John D. Twombly, of Winchester, for the past ten or eleven years, and includes not only filling the boxes but also keeping them watered and renewed throughout the summer. The boxes used weigh when filled thirty tons. Various plants are placed in them, including English ivy, scarlet geraniums, pansies, cannas and rhododendrons. The boxes themselves are made of galvanized iron to meet Mr. Twombly's specifications. They are made two inches high in front and ten inches in back, which gives a nice sloping appearance to the boxes. This is a distinct advantage when the boxes

TEXAS STATE FLORISTS' ASSOCIATION

Mr. R. C. Kerr tells me that the Sixth Annual Convention of the Texas State Floral Association was the greatest from the standpoint of attendance, enthusiasm and good accomplished that was ever held by this organization. Mr. Kerr says that it is planned to make the association much broader in scope than its name might imply. In fact, it is to cover the whole Southwest in its activities, and representatives have been appointed in Oklahoma, Louisiana and Arkansas to stimulate interest.

One of the greatest pieces of work accomplished at the convention was the raising of an additional \$1,000 for the National Publicity Fund. Probably the crowning event of the convention was a dinner given at the Greenwood Floral Company's plant by the manager, Mr. Davis. Mr. Davis is proving a great addition to the ranks of the Texas florists. Mr. Kerr calls him a small bunch of live energy. Certainly he is on the job every minute, and was exceedingly successful in greasing the track for the convention.

The Greenwood Floral Co. has one of the finest ranges of greenhouses in the South, and it was an inspiration to the visiting florists to go through this plant and study its up-to-date equipment. One of the most valuable features of the convention was Mr. Kerr's own paper on the value of co-operation in a retail store, but he didn't say anything about that, which was natural. Mr. Kerr is modest himself, but it was pleasant to note his enthusiasm as he exclaimed:

"We have some great men in our state, and these conventions will find us the material by which the florists in Texas will be brought to the front."

Certainly the Southern florists are making a name for themselves. The Tennessee Association earned a large amount of publicity by its progressiveness in putting out a complete printed report of its convention activities, a report that is giving the addresses and papers a much wider circulation than they would otherwise have received. Now the Texas Association is showing the same spirit of energy and activity, all of which speaks well for the business of the florists in the Southland.

AN ENGLISH GARDENER IN AMERICA

The following letter published in an English garden paper is interesting as showing the impressions made by American gardeners on an overseas visitor:

"I have yet to see herbaceous borders and Rose beds as I know them at home, although I do not doubt their existence on some of the larger estates.

"Owners of suburban houses here devote most of their ground to grass, on which are dotted various trees and shrubs.

"Severe winter weather and scorching heat in summer are, I am informed, strong factors operating against successful gardening in these parts.

"The specimens of *Enkianthus* I have seen are quite small. They had become so big that the owner pruned them a year or two ago; but for all that they are charming. They have been in flower some ten days. As to their hardiness it goes without saying for the winters here touch zero and below, I am told. I saw the last of winter disappearing when I arrived on March 23; the snow was two feet to 4 feet deep, forming a solid mass that took a week or more to melt, both here and in New York.

"One of your correspondents is, I notice, worried by *Equisetum* (Horse tail). Here it grows on the banks adjoining the railroad, and reaches out along the swamps and by the streams and rivers—acres of it.

"Speaking of swamps, I pass miles of them daily, and here the mosquitos breed. They are of the small type, but I am told that a bigger species comes later."—*T. A. Weston, New Jersey, U. S. A.*

IRIS ARENARIA

The dolls gave a tea party. They decorated their rooms with the pink-tipped English daisies and the little Johnny-Jump-Ups. Then they wanted some especially lovely flower for their table. They formerly used the Baby-Doll or Tip-Top rose, but it had been so well cared for in the garden that though still retaining its pink color, its creamy petals it had grown too large for them. So one doll said he would go to the rockery and bring from there the little yellow Jonquil *Cyclamens* and the new Iris he had found. "An Iris!" the other dolls exclaimed, "why you will need the dragon-fly to bring it in his airship, it will be too heavy for you to pick and carry." "Not this Iris," the enthusiast replied, "it was made for us dolls." When he returned

with the lovely yellow blossoms to which he had added the white drops of Venus' tears, the other dolls were so pleased that they danced and sang about the flowers and were glad they had their friends to keep festival with them.

This exquisite mite, which really seems to us grown-ups as if it had been grown for the children's and their doll's delight, is native in Hungary. The great flags of the *Iris Pseudacorus* are a joy to behold, but the fairy-like daintiness of this little *Iris Arenaria* should keep it from being forgotten in the study which the new Iris Society has started among us for the flower which includes among its members the *Fleur-de-lis* of France.

M. R. CASE.

Hilcrest Gardens,
July 19, 1920.

DENVER FLORIST IN THE EAST

Dennis J. Sullivan of Denver, Col., is the guest of his mother, Mrs. Margaret Sullivan of 273 Grafton street, Mr. Sullivan arrived in Worcester Wednesday, and yesterday morning called on his brother, Mayor Sullivan, at City Hall and presented him a bouquet of Killarney roses he had brought from his greenhouses in Denver.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I find the Regal lily in gardens everywhere now, and wherever it is grown it proves an attraction. I think that no lily is better adapted to suburban gardens, even though only a few bulbs can be planted. This was shown the past week or two in Worcester, Mass., where three giant stalks of this lily flowered along the front of the porch at the home of Joseph H. Perry, 276 Highland St. On the tallest stalk there were twelve blossoms and

six on each of the others. They emitted a fragrance which could be detected for a long distance, and a great many people stopped to admire the flowers.

Another Worcester woman who grows these bulbs, but in a larger way, is Mrs. Homer Gage, whose summer home at Iristhorpe, in Shrewsbury, is one of the show places of that section. Mr. Perry's specimens are only a generation from the original bulbs which were brought back from the border-

land of Thibet by Professor E. H. Wilson, of the Arnold Arboretum. So much attention do these flowers attract that almost half a column was given to them in the Worcester Gazette, the writer describing the introduction of the lily as follows:

The discoverer was Ernest H. Wilson of the Arnold Arboretum at Jamaica Plain, who was on one of his periodic exploring expeditions in China, seeking rare plant life for the Arboretum, and especially new lilies, upon which he is an authority. Perhaps he was the first white man to gaze upon the Regal lily. He had traveled 1,800 miles up the Yangtze river and 250 miles beyond up its tributary, the Ming, to the confines of the mysterious Thibet. There, in a narrow, arid valley, 7,200 feet above the

Tel., Main 6267 5948 **WELCH BROS. CO.** 262 DEVONSHIRE STREET BOSTON, MASS.

sea, he found the glorious lily covering with its flowers the valley levels and the precipitous mountain sides.

The scene was one of marvelous beauty. For a brief season in June the lonely, semi-desert region is transformed into a veritable fairyland. His discovery nearly cost Mr. Wilson a leg, for in gathering the bulbs on a rocky slope a boulder fell upon it and crushed it. Being, as he was, hundreds of miles from even the most rudimentary surgical aid, the condition of his injury became most serious before it was treated.

I fear that California is going to suffer even more than some other parts of the country as a result of the exclusion ruling of the Federal Horticultural Board. Professor Wilson, on his trip to India and Australia, expects to find many fine plants which would thrive on the Pacific coast and enrich the flora of that section. In the past the Arnold Arboretum has added many good new plants to the list of those growing well in California, and hoped to provide many more as a result of this expedition. As it is, however, it is not probable that any attempt will be made to send such plants home, however attractive they may be. It is likely that Professor Wilson's discoveries will be sent to England and distributed from there. This is a statement which will not fall very pleasantly on the ears of gardeners and garden lovers in United States who are interested in the horticultural advancement of the country and appreciate what the Arnold Arboretum has done in the past in the way of

making important introductions. It may be that some seeds will be sent here, but the Board rules, I understand, that they cannot be sent by mail and can be admitted only if they come by express, when they are examined by experts of the Board at the port of entrance. It seems rather absurd, however, to think of sending a half ounce of seed in an express package.

The last bulletin of the New York Botanical Garden is an exceedingly interesting document. It is really the fourth edition of a descriptive guide to the grounds, buildings and collections. The fact that it contains 212 pages, besides numerous illustrations, indicates that it contains a pretty complete description of an institution which has gained more than national fame, and is doing a splendid work in the horticultural interests of the country.

The activities of the garden are many and important, and the 400 acres of land which are occupied furnish natural landscape of great beauty and variety. In the herbarium on the upper floor of the museum building is the most extensive and complete collection of the kind in America, comprising as it does the Garden Herbarium and the Herbarium of Columbia university. The latter is one of the oldest collections of its kind in the United States, having been begun by Dr. John Torrey soon after the commencement of the last century. The combined herbariums comprise more than a million and a half specimens.

The greenhouses are perhaps the

most interesting features to the public, but students spend much time profitably in the pinetum which has been carefully developed, and includes a great many foreign specimens. Adjoining is the deciduous arboretum in which are trees covering an even wider range.

I have touched in the briefest way on the contents of the garden as mentioned in this illuminating bulletin, and might go on to write at length about the cherry collection, the rose garden, the lilac garden, the dahlia collection, the water garden, the hemlock forest, the shrub garden, and the many decorative features which are found here and there. A perusal of the Bulletin will give a season of enjoyment only next to that of a visit to the garden itself.

It seems that the Western visitor who recently inspected the gardens around Boston on the occasion of the Convention of the National Garden Clubs on the North Shore did not admit that the estates of the East are any finer than those in the West. At any rate, one writer in a Chicago paper says:

"It is not without satisfaction that we glean from those members of the Garden Clubs in Illinois who are slowly returning from the big general meeting of the National Garden Clubs, in June, that while there are some lovely gardens thereabouts, taken as a whole they do not shake the supremacy conceded by many experts to the gardens near Chicago." The writer then goes on to point out that two of the show gardens around Boston are really owned and directed by Chicago women, Mrs. R. T. Crane and Mrs. James H. Moore. The former place is the one of which Robert Cameron, for many years at the Harvard Botanical Gardens, is now superintendent. Mr. Cameron is doing much to make this the finest place on the North Shore, and has the ability to succeed. After all, though, I do not think it is the purpose of the women to make invidious comparisons, but rather to work in harmony for the building up of horticultural interests throughout the country, each garden owner learning what she can from the work of others.

CONVENTION PROGRAM

Important Matters to be Taken Up at the Cleveland Meeting

The program for the Convention in Cleveland, August 17, 18 and 19 is as follows:

First Day, Tuesday, August 17th.
2.00 P. M.

Invocation by Rev. Roy E. Bowers

Convention called to order by H. P. Merrick, President Cleveland Florists' Club.

Address of Welcome by Adam Graham, Cleveland, Past-President S. A. F. and O. H.

Address of Welcome by Hon. W. S. Fitzgerald, Mayor of Cleveland.

Response by ex-President J. F. Ammann, Edwardsville, Ill.

President A. L. Miller's address.

Reading minutes of the Executive Board.

Report of the Secretary.

Report of the Treasurer.

Report of the Finance Committee.

Report of the Washington Representative.

Reports of the State Vice-Presidents.

Reports of the Standing Committees.

Report of Committee on Development of American Products.

Report of Committee on School Gardening.

Report of Committee on Nomenclature.

The Publicity Committees and the National Flower Show Committee will report at subsequent sessions.

Reports of Special Committees.

Consideration of invitations for selection of next place of meeting.

Miscellaneous Business.

Judging of Trade Exhibits.

First Day, Evening Session.
8.30 P. M.

President's Reception.

The function will take place in the Hotel Hollenden. President Miller requests that this reception be entirely informal. It is suggested, therefore, that the most comfortable clothing will be the most appropriate for the occasion.

Ballot for next place of meeting.

Second Day, Wednesday, August 18th.

Morning Session—9.30 A. M.

Nomination of officers for 1921.

Report of Committee on President's Address.

Address: "Insurance," by J. S. Kemper, Chicago.

Discussion.

Discussion: "A Standard Grading for Roses."

Discussion: "Is uniformity in Prices Possible?"

Discussion of Amendments to Con-

stitution and By-Laws, and voting on same

Afternoon Session—2.00 P. M.

Report of Committee on Publicity, Henry Penn, Chairman.

Discussion.

Address: "Publicity," by Major P. F. O'Keefe, Boston, Mass.

Discussion: "Parcel Post Insurance."

Evening Session—8.00 P. M.

Lecture: "Demonstration of Retail Work—what can be done with Flowers," illustrated by lantern slides. By Max Schling, New York.

Third Day, Thursday, August 19th.

Morning Session—9.30 A. M.

Election of officers for 1921. Polls open from 10 A. M. to 11 A. M., or until all in line have voted. Voting will be conducted under the new system. There will be five voting places, "A" to "D" inclusive; "E" to "K" inclusive; "L" to "P" inclusive; "Q" to "T" inclusive; "U" to "Z" inclusive. Please vote promptly. Only members in good standing can vote.

Report of Judges of Trade Exhibits.

Report of the National Flower Show Committee. By George Asmus, Chairman.

Discussion.

Discussion: "The Fuel Situation." Question Box.

Deferred Business.

Afternoon Session—2.00 P. M.

National Flower Growers' Association.

Meeting for organization.

Report of Committee on Memorials, Michael Barker, Chairman.

Final Resolutions.

Evening.

Bowling Tournament—Time and place to be announced at the Convention.

SPECIAL MEETINGS.

First Day, Tuesday, August 17.

10.30 A. M. Opening of the office of the Ladies' Society of American Florists in Convention Hall. Registration of members.

10.00 A. M. Conference of the National Association of Gardeners.

Second Day, Wednesday, August 18.

9.00 A. M. Annual meeting of the Florists' Hall Association of America.

10.00 A. M. Meeting of the Florists' Telegraph Delivery Assn.

9.45 A. M. Annual meeting of the Ladies' Society of American Florists.

Third Day, Thursday, August 19.

9.00 A. M. Meeting of the College Section of the Society of American Florists and Ornamental Horticulturists.

9.00 A. M. Meeting of the Board of Directors of the American Carnation Society.

AUGUST

A blue haze is over the fields and forests. The grasses have ripened into waves of brown and red or are stacked in ricks, from which the sun gleams back. The bouncing-bets or saponaria are in blossom by the gray stone-walls, near which the red day lilies are already dropping their petals.

The gardens are gay with hollyhocks and bright with red and yellow nasturtiums. Many seeds have already ripened in the gardens. The early apples are beginning to color. Strawberries have given place to raspberries. Parties of blueberry pickers are enjoying the woods and stony fields.

Great clouds are sailing overhead and making pictures in the sky. The expectation of the early summer is ripening into fulfilment. The insects have done their worst in our gardens, and are leaving to us the enjoyment of the flowers. While the trees on which the gypsy caterpillars have been feasting are again growing green.

The exhilaration of the autumn with its harvests of fruits and other crops has not yet come. There is an occasional day when the air has the tonic of September, but as a whole there is a lazy pensiveness about August which brings us peace and rest.

M. R. CASE.

Hillcrest Gardens, July 27, 1920.

DO PEOPLE REALLY LIKE TO ASSOCIATE WITH YOU?

Some time ago in 'Forbes Magazine' I read a line which ran as follows: Do people really like to associate with you? Just think it over.

What a vast knowledge one can get, if on taking inventory of one's self, you could answer—YES. What better way of determining the problem of the offtime question,—Am I a success? However, the answer to the above question, which is to the point, is the best line seen in a long time, and many of our fellow-workers in the craft have undoubtedly realized by this time, their popularity by the manner in which they are received by those with whom they come in contact, particularly florists. For therein lies the acid-test of what spells progress.

Pick a progressive shop and find out the cause. First, the Golden Rule method, and the desire to co-operate with every movement that will benefit the greatest number. And one of these movements is the present National Publicity Campaign which is being recognized by all as the most worthwhile policy ever undertaken by our society.

Of course, the object of this is to illustrate the types who are constantly doing something locally as well as nationally for a purpose broad in its character and who never shirk their part. Many a florist is generous of heart when a personal call is made for an object broad as our campaign is, but the worth-while contributions coming unsolicited, are from the types of men who can answer YES to the title of this article.

The list of contributors to the National Campaign Fund contain many names that you could answer YES to. Is your name on the list?

HENRY PENN. Chairman.

National Publicity Campaign.

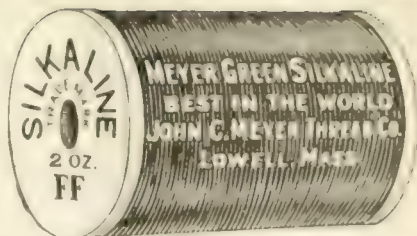

WATCH OUT FOR THIS MAN

Philadelphia, July 26, 1920

Gentlemen:—We are advised that a young man by representing that he was a son of William F. Dreer, recently secured a loan from a party in the East with whom we do business and as this has occurred several times during the past few years, we think it would be well that the florist trade be warned against any attempt to secure money in this manner. The late William F. Dreer left no male relatives, and none of either sex in need of soliciting funds in such manner.

Very truly yours,

HENRY A. DREER, JR.

Be sure and get Meyer Threads and take no other.

LEMON OIL COMPANY

Dept. 2, 420 W. Lexington St., Baltimore, Md.

can put up his problem to them stating that he wants a decorative signature which shall prove a real asset in his business. He should indicate whether he prefers straight lettering or more ornate lettering and if he wants pictorial effects introduced. The concern consulted will gladly send you sketches from which to make a choice. They may be only in pencil and rather roughly done but they will indicate the result that can be obtained. After your choice has been made and the work finished you can have plates or electros made of different sizes to conform with the size of your newspaper advertising, store literature, etc. It is a pretty good plan to have a large copy made and used outside of the store where it will be before the public all the time thus linking the store directly with the advertising which appears in the papers.

Some stores go so far as to use practically the same design all the time in the borders for their advertising and on their literature and in fact wherever such a decoration is used. A store manager of wide experience is quoted as follows in regard to name plates:

They should never be more than two inches in depth.

They should not be over illustrated, because the constant use of the same heading with the same pictures will grow monotonous.

The illustration feature should not be at all seasonable. It must be non-committal—as apropos in summer as in winter. For, once adopted, it should not be changed.

Lettering of firm name should not be too black, too massive or too aggressive. It will defeat its own purpose and begin to detract from the body of the advertisement.

Make all lettering very, very legible. Avoid script that is too "fancy."

Such hand-lettering must be original, distinctive and different from the general run.

Be very sure, indeed, that the master drawing will successfully reduce to the smallest size needed.

LITTLE TALKS ON ADVERTISING

A prominent advertising man has been discussing in one of the papers the question of store signatures, and it seems to me that this is a matter of special interest to florists. There is no line of business where it proves more profitable to have a signature with which the public is thoroughly familiar and which appears on every advertisement, and on all of the literature, as well as the correspondence put out by the concern. We have only to think of Max Schling, Thos. F. Galvin, Inc., and Henry Penn, among others to realize this fact.

The extent to which the character of a store is judged by the appearance of the lettering used in its copy is surprising, and the possibilities along this line have not occurred, probably, to the average florists. There should be individuality in a store signature, as well as in that of the private individual.

The expert mentioned has collected store name plates from all over the country, and finds that at least 70 per

cent of them are decidedly poor, meaning by that, weak, lacking in character and without artistic distinction. In others the name plates are mere slugs of hand drawn lettering conventional and uninspiring. Finally there is a limited percentage of store name plates that are dignified artistic and lend character to any piece of copy or store literature with which they are associated.

Did you ever stop to think that a name plate is practically a visiting card? It serves as the introduction of the store and its guests. Some stores seem to think that because a certain name plate or signature has been in use for a long time it cannot be changed. To be sure there is some value in long associations and yet if a thing is bad or partly so, there is no reason why it shouldn't be frankly taken in hand and altered.

Probably the fact is not generally realized that there are engraving houses and art studios which specialize in this kind of work. Any florist

Little Ads. That Bring Big Returns

Little Ads. in our Classified Buyers' Directory bring big returns to both advertiser and advertiser. Anything wanted by florists, gardeners, park and cemetery superintendents, etc., can be sold through this medium. Don't fail to read over these Ads. in each issue and you may find one or more that will prove profitable to you.

BUYS SEVEN GREENHOUSES.

Rowlands, the florist, of Whitesboro and Utica, has just purchased five greenhouses from Williams & Kalkof at Sunset avenue and Waverly place, and workmen are now razing them preparatory to their removal to Whitesboro, where they will become part of the Rowlands plant. Williams & Kalkof have discontinued business and a few days ago they disposed of their stock. Dr. W. A. Rowlands then closed the purchase of the houses. Dr. Rowlands has seven houses in operation at Whitesboro at the present time, and from the seven purchased will make five houses which he will add to his business, making twelve in all.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most ambitious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species-names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely Illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NEW ROSES FOR 1920

We shall offer for 1920 the three New Roses:—

PILGRIM CRUSADER
and
MRS. JOHN COOK

We want you to know them. May we send you full descriptions? Your request will bring it.

A. N. PIERSON, Inc.
CROMWELL, CONN.

Winter-Flowering Roses

We have a surplus of winter-flowering roses after meeting our own planting requirements, which we can offer in more or less limited quantities in the following varieties, fine strong plants from 3½ inch pots, OWN ROOT stock:

HOOSIER BEAUTY
AMERICAN BEAUTY
FRANK W. DUNLOP
COLUMBIA

FRANCIS SCOTT KEY
HADLEY
OPHELIA
MIGNON, or CECILE BRUNNER

and the following sorts in GRAFTED stock from 3½ inch pots:

MRS. CHARLES RUSSELL
PREMIER

MRS. AARON WARD

FERNS

NEPHROLEPIS VICTORIA (The Victory Fern). A beautiful, new, crested form of Teddy Jr. 2½ inch pots, \$2.00 per dozen, \$20.00 per 100; 3½-inch pots, 50c. each; 6 inch \$1.00 each; large specimens, 10 inch \$5.00 each; 12 inch, \$7.50 each.

NEPHROLEPIS ELEGANTISSIMA COMPACTA. 3½-inch pots, 35c. each; 6-inch pots, 75c. each; 8-inch pots, \$2.00 each; large specimens, 10 inch, \$5.00 each; 12 to 14-inch, \$7.50 to \$15.00 each.

NEPHROLEPIS MUSCOSA. 3½ inch pots, 35c. each; 5 inch, 75c. each.

NEPHROLEPIS SUPERBISSIMA. 6-inch pots, 75c. each.

F. R. PIERSON, Tarrytown, N. Y.

Two summer flowers we can recommend, good shippers, good keepers, good sellers—

GLADIOLI

The newer and better kinds of Gladioli, wonderfully well grown in any quantity, all shades.

\$4.00, \$6.00, \$8.00
PER 100

EASTER LILIES

The choicest that can be produced.

\$15.00
PER 100

Everything in Cut Flowers, Plants, Greens, Ribbons and Supplies.

NATIONAL PUBLICITY CAMPAIGN

The front cover page of "Judge," issue of August 7, designed by that noted artist, James Montgomery Flagg, has for its subject "Say it with Flowers." The drawing depicts a beautiful girl offering to a very meek and mild looking young man what many who have seen the page at once believe to be a sprouted onion, although the large scroll caption is plain enough. "Say it with Flowers." Of course, it is not an onion; no girl would have an onion as part of her corsage bouquet, and from her bouquet her gift is evidently drawn. We do not know what the artist intended it to be, but we are prepared to identify it as the "Poet's Narcissus," and its presentation to the young man intended to check a desire for something better than mushy poetry. Why, indeed, should he not "Say it with Flowers" to such a beauty, instead of expressing himself in fervent verse. Why the lady is giving him a sprouted bulb is, of course, her affair—she might have meant that he could grow to "Say it with Flowers."

Anyway, the mystery, if mystery it be, has set a lot of people thinking, and, very naturally, our slogan is uppermost in their thoughts. That's where we come in. We have a dozen or more letters before us, from florists who also are puzzled, they want to know whether the sketch is a "boost" or a "knock." We have no right to expect anything serious from a humorous paper, therefore, we do not consider it a "knock." We may not have interpreted the sketch aright, but, anyway, you buy a copy, "pay your money, and take your choice."

But we have all along contended that no matter how it is used, the slogan shows up for itself. It has been used in the "funny" departments of our newspapers constantly, showing its appealing slogan. Does anyone know of another slogan taken up as ours is? It has been the object of our Publicity Committee to make the slogan a "household" phrase. Who shall say that the humorists are not helping us to this end. Some of the world's biggest advertisers have not hesitated to use humorous matter in

CRAIG QUALITY PLANTS

Our Trade Exhibit at the Cleveland Convention in 1896 was awarded a Certificate of Merit. We have missed but two convention displays since that time. Our 1920 Trade Display will be the largest and best we have ever made, featuring

Crotons, Dracaenas, Pandanus, Ferns (all types), Cyclamen, Begonias, Erica, Ficus, Oranges, Heather, Etc.

Visit our booth at the S. A. F. and O. H. Convention in Cleveland and we will be pleased to see you. We feel sure that you will be satisfied with the quality of our stock. See any of our representatives.

their advertisements. Many of us can remember that glorious copy put out by the Pear's soap people, showing a disreputable tramp writing a testimonial about the soap, "I used Pear's soap three years ago, and have not used any other since."

We gain, no matter how the slogan is used. It is a wonderful piece of work and is worth all the money the florists can spend on it. Many other industries would just like to have a slogan which draws as ours does. Do you think they would hesitate to back it up with millions of dollars? We do not seem to be able to collect the really small sum of \$100,000 to carry out a campaign which we know would give us returns in millions. Just think of this, Mr. Nonsubscriber—you stand in your own way while you do not subscribe.

JOHN YOUNG, Secy.

43 West 18th Street,
New York.

THE CLEVELAND CONVENTION.

At the Thursday morning session of the Convention, James H. Herron, a noted engineer and expert in boiler plant efficiency, will give a talk on "Boiler plant efficiency, and how to effect fuel economies." This subject

is one of great importance to all florists operating greenhouses, as the fuel problem is one occasioning much worry at the present time.

JOHN YOUNG, Secy.

Many of our members at the close of this present week will be on the eve of starting for the convention city of Cleveland. Several, no doubt, are already on the way. Judging from the reports received, there is every reason to believe that the attendance at the convention will be very large.

The matter of hotel reservations has had splendid attention from the local committee, and everybody will be comfortably housed.

I wish personally to thank all who have arranged to honor the convention through their presence, and it is my fervent hope that they will enjoy their visit and return home the better for having taken the journey. Our Cleveland brethren are sparing no effort to make our stay in their city most pleasurable, and, without doubt, all of us can make it profitable through what we shall see and learn of interest to us in our respective lines of business.

The fifth city assures us a most hearty welcome, let us in return give

our brethren there the biggest convention of our society on record.

A. L. MILLER, President.
Jamaica, New York.

CLEVELAND CONVENTION TRADE EXHIBITION

The following are additions to the list of exhibitors previously published: Acorn Refining Co., Cleveland, O.; Foley Greenhouse Mfg. Co., Chicago, Ill.; Klus, B. MANY FLORISTS

Add New Department TO THEIR BUSINESS

A decided trend in recent enrollments in our Correspondence School has developed the fact that Florists are awakening to the great possibilities in Landscape Architecture and Gardening. Let us tell you how you can start a complete, well equipped department to handle this business.

American Landscape School

7 H, NEWARK, NEW YORK

PENNSYLVANIA FLORISTS ENJOY THEMSELVES

Frank M. Ross entertained a party of about 50 of his florist friends at his farm on the Neshaminy near Doylestown on Saturday afternoon and evening August 7. A ball game between the De Gour Veterans and Sam Lilly Babies was a feature of the afternoon. The line up and score follows:

DE GOUR'S VETERANS	SAM LILLY'S BABIES				
Roth, c	Swan, c				
Cox, p	Lilly, p				
Kennedy, 1b	Culbertson, 1b				
De Gour, 2b	Faust, 2b				
Reinhardt, ss	Jamison, ss				
Gaul, 3b	Giles, 3b				
Bradley, lf	Rodack, lf				
Bernheimer, cf	West, rf				
Hamilton, rf	Philips, cf				
De Gour, cf					
Lilly's Babies.....	1	2	2	0	
De Gour Veteran's..	1	0	2		

A thunderstorm stopped the game at the fourth inning. The excellent batting of Ralph Faust and the fine pitching of Samuel Lilly were high points in this spanking match while it lasted.

There was a lively swimming race which was enjoyed by many. The distance was 50 yards and the winners were: Frank M. Ross, first; Eugene Bernheimer, second; Ralph Faust, third.

The under water test for time was won by Bernheimer. The fat man's race was won by Faust, Lilly and Bernheimer in the order mentioned. After the sports were over the guests on their way by lively marching music. Mrs. Ross officiated at the piano and her lively welcome was heartfelt and cheering. A sumptuous repast was done ample justice to and the balance of the evening was spent in dance and song. Everybody went home feeling happy and joyful and extended their heartfelt thanks to Mr. and Mrs. Ross for a glorious afternoon and evening. Or to put it in the homely vernacular of Al. Swan "that man Ross certainly did show us a swell time."

The McCallum Company of Pittsburgh is to hold its annual picnic today, August 14th, at Riverview Park. Among the events planned is a concert by the newly organized glee club.

Vice-president Ben Miller of the American Bulb Company, Chicago, is now on his way to Holland to look after the company's interests in getting over a large bulb supply.

Little Talks on Advertising

R. H. Kennedy of Dayton, O., is not a florist, but he understands the art of advertising and there is no retail florist who cannot glean valuable information from the following remarks on the subject:

"To be easy to understand," he said, "an advertisement must be made of simple words, short sentences and few ideas. Big words and involved sentences will not be read. The purchasing public does not care how well educated you are—it simply wants to know what you have to sell—its quality and its price.

"For many people to read it, an advertisement must be set in plain type and must be uncrowded and unfused by needless cuts, borders and ornaments. If an advertisement tells of but one line of goods it may catch the eye, but if it is crowded with many ideas the chances are that it will not be read. It is not the number of articles you advertise that counts, but the number of persons that come into your store to buy the goods you have advertised. I do not mean that if you have a large space you should use it to tell of one article. A half page or a page advertisement is really a collection of smaller advertisements to each of which the principle stated should apply. Each should tell of but one line of goods.

"Curlicues in type and elaborately designed borders are not desirable. Use simple type and plain borders. In order to respond to an advertisement people must be able to read it easily,

be able to understand it easily, and receive a firm impression easily, favorably and definitely.

"To give individuality to your advertisements it is well to have a specially designed nameplate for the name of your firm or store.

"Make your advertisement different. Do not copy what other people say. Put your personality into them. Tell your story about your goods just as you would tell it in the store.

"Cuts are good if they really illustrate, but a bad cut is worse than none at all. Do not use a cut that is not just what you want, simply because you can get it from a syndicate cheaply. If you want a syndicate to plan your advertising be sure to get individual attention. Ready-made advertisements do not always apply to your particular business and will not get results for your store. To make a favorable impression, advertisements must have an attractive appearance, by having a symmetrical form, attractive lettering and appealing illustrations.

"In preparing your advertisements write them out as best you can and then say the same thing in half as many words.

"To make a firm impression an advertisement must be devoted to one main subject and all subordinate items separated. An advertisement may be made attractive by contrast in type sizes, strong head lines and few of them and massed white space. Effective headings may be used to tell the story or to capture attention only.

"Your advertisement should take the reader over the five steps of selling: Attention, interest, desire, confidence, action. Some people sometimes only glance at advertisements. If the head-

ings are schemed to make a complete impression, the advertisement gets both the 'glancers' and the 'readers.' Illustrations must be suited to the subjects—they cover the ideas of the text. Desire must be stimulated by attractive details; but it is mostly aroused by pictures. Variety is one of the best means of keeping interest in your advertisements. Change your offerings.

"As a general rule it is well to give prices in your advertisements. If you do not give them the reader may assume that the price is high. If you are advertising high-grade goods, place the emphasis on the quality and mention the price in an incidental way.

"Be absolutely honest in your advertising. Occasionally sell goods below cost, but do not overdo the below-cost sale. Everybody knows that business cannot be conducted on that basis.

"Your advertising is your store news. If you haven't any, make some changes frequently and keep the store up to date.

"Do not spend a few dollars in advertising and then say 'Advertising doesn't pay.' Advertising does pay, as attested by thousands of merchants over the country who have become successful through its judicious use. It may take a little time to secure maximum returns, but if you make it a continuous part of the policy of your store you will not be disappointed by the results.

"Select your advertising medium carefully. Its value, to a certain extent, depends upon the goods you sell and the conditions under which you sell them. Except for the small store serving a district in a city, more people can be reached easily, oftener and at less expense by newspaper advertisements than in any other way. The merchant who is not using them is missing a great opportunity."

No. 7

THE TALK OF THE TRADE

The S. A. F. convention is about to start and all indications now point to one of the most successful conventions ever held by the National society. Cleveland is an ideal city to visit in many ways,—easy to reach and, regardless of what one plans to do when he goes to the convention, whether it is business, sightseeing or a combination of the two, we are assured of a satisfactory visit. The Park System of Cleveland alone is worth the trip. About fifteen hundred acres are taken up in parks, the most important of which are Monument Park right in the city, and then the chain of parks connected with drive-ways and boulevards including Doan Park, Gordon Park, Rockefeller Park and the small Lake View Park.

Besides the parks as an item of interest, there are ample opportunities for water trips, and pleasant excursions can be made for either short or long distances by boats, thus avoiding unpleasant railroad travel.

The florist who wishes to visit greenhouses will have plenty to interest him such as the Bate Bros. range at East Cleveland, the Friedley Company, J. M. Gasser Co., and a short distance from Cleveland the Storrs & Harrison Co., and Merkle Bros. and Carl Hagenburger at Mentor. There is also the large range of glass under the name of Adam Graham & Son founded by an ex-president of the S. A. F., Adam Graham. The above-mentioned include only part of a number of very successful and prosperous florists in and around Cleveland.

Everyone who has either visited Cleveland or reads the trade papers knows well that this city can boast of a crop of retail flower stores equal to any in America.

Secretary Young has been on the ground in Cleveland since July 27th, and everything has been whipped into shape now in preparation for the opening day. We are told that hotel accommodations will be well taken care of. Many of us can remember the disagreeable experiences in Detroit, and it is pleasing news for us that this trouble will not be gone through with this year. The program for the convention assures everyone of plenty of interesting matter, both in

LATEST PICTURE OF PRES. MILLER

of business and recreation; and in the way of sports, the bowling match promises to be a hotly contested battle. Cleveland is out to show the visiting bowlers something about the game, so watch for a good fight.

There is sure to be a large trade exhibition in Cleveland as space was taken up early and for the full amount that was available. It appears now that Cleveland will have the opportunity to set a new record for business

JOHN YOUNG
Secretary of the S. A. F.

at the convention, as there is a grand chance to break any previous mark set.

Samuel Goddard, of Framingham, started for the convention with a light heart because he had seen his coal bunkers filled to the top shortly before. Like all of the other growers around Boston, he had felt more or less uncertain, and was very happy when the coal showed up. The price of \$14.00 a ton didn't tend to increase his happiness. Still he wasn't making any complaints, when I saw him last. Indeed, if anything, the smile for which he is famous was a little broader than usual. He told me that a number of other growers were also getting their supply at the same figures. I understand that Mr. Strout, of Maine, was able to make an arrangement with a nearby manufacturing concern by which he gets his coal for less than \$12.00. Strout, however, always was a lucky chap. Certainly his arrangement seems like a fortunate one to other Maine growers who are paying anywhere from \$14.00 up. Still, it isn't the price that counts this year. It's the fact of having the coal.

I have not been surprised to hear that Mr. Richard M. Wyman has now become the proprietor in fact of the Framingham Nurseries. It seemed inevitable that he should become the full owner. For the last five years he has been managing the Framingham place, and has had a pretty free hand so that a change of ownership does not mean much as it might if some outsider were buying in. Mr. Wyman is making a name for himself as an enterprising grower of novelties. He believes that within a certain definite limit the work of growing the newer things for the trade can be made profitable, as well as doing a good turn for the garden lovers of the country. Much depends upon a man's ability to forecast what are going to prove popular and salable items. I suppose that a good nurseryman has the natural faculty of smelling out worthwhile novelties wherever they may be, having a fifth sense which is somewhat akin to the newspaperman's proverbial nose for news. Mr. Wyman says:

"I am not making any attempt to grow all the latest things, nor even

the majority of them, but we have here many of the later introductions. Although some have not as yet reached salable size. In the course of another year or two we shall have these novelties to sell. At any rate, we are laying particular stress on the rarer and more desirable sorts, including the various dwarf evergreens, new dwarf shrubs and interesting ornamental trees."

There are slightly under 400 acres of land in the Framingham Nurseries property, of which nearly 250 acres are under cultivation, containing some of the prettiest blocks of ornamentals of the kinds demanded by leading landscape architects and discriminating retail buyers, which we have seen for a long time. There is no doubt about Dick Wyman making a success out of this venture. This will be almost a foregone conclusion, considering the training he has had, but he has already had time enough to demonstrate his ability.

From what I learn, the most prominent buyers in this country are still at loggerheads with Japanese growers in regard to prices on *Lilium Gigantum* for November delivery. Certainly, commission men and dealers in this country have been unable to get any prices from the wholesalers, and those who understand the situation are not surprised at this fact. The Japanese growers, it appears, have not yet come to terms with American importers. Seemingly their cupidity is overshadowing their business acumen. At any rate, they are asking more money than the importers feel inclined to pay, and not until this situation is adjusted and some sort of a compro-

J. J. HESS
Treasurer

mise agreed upon will the bulb market become fluid.

Nurserymen are likely to find the new barge canal in New York helpful in solving their transportation troubles. Recently the canal boat Fred W. Barth arrived in New York with 500 tons of nursery stock. This in itself is a practical demonstration of the canal. The Fred W. Barth made its initial trip under charter to the New York & Western Canal line and docked at Pier 6, East River, which is a New York State covered pier equipped with all modern devices for expeditiously handling stock.

I understand that this concern is making an unusual effort to prove to nurserymen and seedsmen that the new barge canal can actually perform the service for which the people of New York have already contributed over \$160,000,000. At any rate, Edward S. Walsh, superintendent of Public Works, expedited the trip of the Fred W. Barth by issuing instructions all along the line to see that the boat was despatched without delay. Certainly the firms to which the cargo is consigned felt very much pleased with results.

William H. Elliott, the famous rose grower of Brighton, Mass., and Mad-

bury, N. H., is having a beautiful time in California, according to all reports which I hear. He loves to hike and is getting all of this enjoyment he wants through his membership in the Sierra Club. I am told that a party of three hundred composed of men and women members from all parts of the United States, started from Lake Huntington, Fresno County, for their journey to

PHILADELPHIA

BENJAMIN HAMMOND

the high Sierras. One hundred and fifty pack horses, twenty caretakers, five cooks and several guides accompany them. Fifteen miles are covered in a day and at night they camp in the open, using sleeping bags for cots.

The trip is not only a health producer, but sensational, and highly educational as naturalists, geologists and historians are among the travelers.

The height of 12,000 feet has been reached by the party and places 14,000 feet high have been seen.

During his stay in California, Mr. Elliott has delivered two lectures before the Sierra Club. He will return to his home on Crescent avenue in December.

Asters are now showing fine form, and are one of the most important flowers on the market at present. The chrysanthemum-flowered type is to be had, besides a number of other good varieties, so that the selection to choose from, from big to little and for all purposes, is both abundant and excellent. Gladioli were never better. Magnificent, large flowered spikes, in all colors, forms and markings. A vast improvement on the old types common only a few years ago. Roses are not

so plentiful; but enough for the demand. Of course there are no Beauties to be seen around, as they are off crop at present. Russells and Columbias are very fine and the first cuts of Pilgrim—the new one sent out this season by Montgomery—are arriving and meet with much favor. It is a beautiful, rich, bright pink in color, and has long well formed buds that are very attractive. The fragrance is also very pronounced, and those who have tried it say it is a splendid keeper after being cut, as it takes water freely. It looks as if this was a good one, in all respects, both for the grower and retailer. There are very few carnations to be seen around; but the asters take their place nicely—so they are not so much missed. Belladonna is in good shape among the delphiniums, and there are a number of the new hybrid type also coming—some of them of dark and luscious shades of blue and splendid form. These meet with much popular approval. Dahlia are beginning to appear; but it is rather early yet for them. Among the minor items in good supply at present are cosmos, coreopsis, sweet sultan, and Zinnias.

Friends of Rudolph Fischer in the East will be very sorry to hear of the fire which recently did a large amount of damage to his plant in San Gabriel, Cal. Mr. Fischer, as the trade well knows, is the originator of the Freesias Purity, Fischerii and splendens, all of which have had a wide sale. It seems that the fire started near the bulb shed and after consuming the latter reached the barn which was also wholly destroyed. It then jumped to the greenhouses and burned four of them. There were ten houses in all but six of them were saved by herculean effort on the part of the employees with the assistance of neighbors. A great amount of stock was lost, including freesia bulbs, among them all the planting stock of Purity for next season. In spite of this loss, Mr. Fischer is to be congratulated on the fact that he had two good patches of Fischerii and splendens left in the field.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Everything is set for the big convention at Cleveland, and if the weather conditions are satisfactory, the event should prove an unqualified success. Cleveland is an unusually accessible city, and geographically situated so that it is reached without undue expense from both the West and the East, as well as from the South. Moreover, it is filled with florists who are exceptionally enterprising, business-like and hospitable. Not only will the visitors receive a hearty welcome, but they will be able to learn much from visits to the establishments in and around Ohio's leading city.

As has been said before, many believe that the choice of August as a convention month is a poor one, and undoubtedly the attendance would be larger if the meetings were held in a somewhat cooler period. A number of prominent faces will be missed, and this will be the excuse given. Now that the conventions are getting to be real business sessions rather than an opportunity for social getting together, it is probable that this matter will receive further discussion.

It is customary to have one or two specially good speakers on the program, but it is hard to fill a hall for the purpose of hearing a set address when the thermometer is playing tag with the century mark.

Coal situation New England florists are getting their coal. It's costing them a pretty penny, but they are getting it, which is the important matter.

Several of the largest growers around Boston already have their bins full. Others have a promise of speedy delivery. It's costing them about \$14.00 a ton, however. Contracts were made on the basis of less than \$10.00, but the dealers could not keep them. Coal is even reaching the florists of Maine, but the price there is heart-breaking. In Bangor it is now \$20.00 a ton for soft coal. The fact that coal is coming in in reasonably plentiful quantities shows that the Boston dealer who was quoted in these columns some months ago as feeling sure that the coal would come, knew pretty well what he was talking about. Anyhow, those florists who accepted his assurance and refused to get unduly worried have had the best of the matter. Farther west, a different state of affairs exists.

Owing to labor difficulties plus railroad troubles, the coal shortage persists, and it is not surprising that florists are becoming seriously troubled over the outlook. Still, there seems to be a general improvement in deliveries, and now that the government has awakened in a measure to the extremity of the situation, there are reasonable hopes that coal enough will show up before bad weather sets in.

Anything which signifies the getting together of men engaged in the different branches of horticulture is worth at least passing notice, for the greater the co-operation in all branches of the trade, the greater will be the effectiveness of the several publicity works and the specific efforts of each to better business conditions.

These remarks are apropos of plans which are under way on the Pacific coast for establishing closer business relations between the nurserymen, seedsmen and florists of Puget Sound district. Recently fifty delegates attended a meeting at the Chamber of Commerce Building in Seattle for the purpose of discussing this whole proposition. As was stated at that meeting, nurserymen, seedsmen and florists, while their interests are much the same, have often worked at cross purposes, while co-operation is the most necessary requirement.

Another subject that was taken up was the working out of plans to foster the growing of nursery stock on Puget Sound. As a result of the action of the Federal Horticultural Board, aided and abetted by conditions resulting from the war, it is found difficult to obtain the supplies necessary, and this lack is likely to grow greater unless some attempt is made to fill it. Consequently, florists and nurserymen alike are looking to a greater development of plant growing on the Pacific coast, and probably will take some definite move to encourage work of this kind, which is almost vital to their existence.

A personal touch A business may get so large that it is impossible for the proprietor to keep anything like a personal touch with his customers. This is not true, however, with the average florist, and the extent to which a florist can keep in direct contact with the men and women who buy regularly at his establishment is to a considerable extent an index to his business success. When an old time customer drifts away there usually is a reason, and oftentimes a personal talk will reveal a cause which can be removed and restore the confidence and patronage of the customer. There is one florist who makes a point of keeping himself familiar with the countenances of the people who buy in his store, and who seldom fails to note the fact if one of these customers does not appear for a week or more. In that event some sort of action is taken to investigate. Possibly a telephone call is made or a pleasant note dispatched, or it may be that one of the boys is sent out to learn whether the customer has moved or is on a vacation. Not infrequently this man meets in the street a customer whose face he has missed, and with characteristic directness inquires if anything is wrong. In nine cases, out of ten, he gets a straight from the shoulder reply, and very often he learns that the fault lies with some clerk in the store who by tactless word or lack of attention, or possibly by selling stock not up to the mark, has incurred the customer's displeasure. Sometimes a difficulty is discovered in this way which would probably not come to the proprietor's hearing for many months except for such a direct method of approach. To a large extent customers are like plants. They must be cultivated in order to get best results, and there are few lines of business where it is easier to form an intimate contact than in the florist business.

We will be represented at the convention by J. H. Rockman, A. F. Eilers and D. J. Keohane, who will be glad to give any information they possess that might be helpful.

The House of MICHELL

Extends a cordial invitation to every florist, seedman, nurseryman and others to visit their Philadelphia establishment 518 Market Street within one block of Independence Hall and their nurseries at Andalusia, Pa. 16 miles from Philadelphia.

You will find there up-to-date establishments, where a reputation for thoroughness, progressiveness and reliability has made them famous in the horticultural and agricultural world.

Our warehouses at 518 Market Street, 509, 511 and 513 Ludlow Street, are well stocked. Our nurseries at Andalusia will no doubt interest you. There are over fifty acres devoted to the growing of Hardy Perennials, Cannas, Dahlias, Roses, etc. There you will have an opportunity to see the famous "Oaks of Andalusia," one of which is reputed to be from 800 to 900 years old, and the finest, most perfect white oak in Pennsylvania, if not in the United States.

We anticipate the pleasure of your visit and personal acquaintance.

Flowers Under Glass

Apparently the calla is once more coming into its own, and there are indications of a good demand for them the coming season. This applies both to potted plants and the callas as cut flowers. To have them flower early the callas should be started now. You should take off the old soil and put up in five inch pots, using three parts of fibrous loam and one part of well decayed cow manure, with, of course, plenty of good drainage. Set the plants in a cold frame now, until the first of December. If you find any which are soft and flabby, or on which spots of decay show, discard them promptly. It is a good plan to use only fresh roots this year. Callas like plenty of water when they get well started, yet it is easy to over water them, especially at this early stage. They make their roots slowly, and an over abundance of water is harmful.

There should be no further delay in sowing pansies for next year. Indeed, many of the market gardeners who make a business of growing pansy plants for sale in the cities, start the seeds in July. You can get good plants from seed now, though, either in beds about four feet wide, and covering them with straw in winter, is generally followed.

The seeds of English daisies and forget-me-nots can also be sown now. You can get good results by putting them in frames, even roughly made frames, in which there is soil that has been made fine and light on the surface by the addition of leaf mold and sand. Myosotis dissitiflora is a good forget-me-not to plant for early blooming. It is also a good plan to have a few giant flowering varieties of Bellis. Perhaps the demand for these English daisies is less than it used to be, yet it is necessary to have them on hand. When the little plants are large enough to handle, set them about four inches apart. They will go

through the winter with a very little protection.

Prompt measures should be taken to get the carnation houses refilled and most growers are busily at work at the present time. It pays to take time by the forelock if the houses are to be carried forward in good shape. The carnation is a plant which responds very quickly to moisture, and seems to give especially good results when it gets its first moisture from fresh soil. It would be preferable, therefore, to have new earth in the benches rather than to apply water. Some good growers follow the practice of not dipping the roots in water at all, but planting them just as quickly as they can. It should be noticed, though, that such growers always have their fields close to their houses so that the plants are out of the ground only a short time. If more than six hours must elapse before the plants can be reset, they should invariably be dipped in water.

This is the time to sow primroses in order to have them blooming well from February and on until Easter. You can figure this out for yourselves because it usually takes about seven months from the time the seed of primulas is sown until the plants are in flower. Use shallow boxes or seed pans, and fill them two-thirds full of light loam, leaf mold and sand. The seed germinates rather slowly so that it is a good plan to soak it for twenty-four hours before planting. One good result of this practice is to secure more even germination than would otherwise result. Also make certain that you have fresh seed. This is of the utmost importance. In about six weeks the young seedlings will be ready for pricking out, and you will find it a good plan to use flat boxes or seed pans for them rather than pots. A good soil can be made of one part common loam and two parts peat. By the time the plants have three or four leaves they will be ready for potting up in small pots which can be done without setting them too deeply. Then if the primulas are placed in a frame where they can have plenty of air, they will make rapid growth.

NATIONAL GARDENERS' ASSOCIATION

The following is the program for the Annual Convention of the National Association of Gardeners to be held at the Marquette Hotel, St. Louis, Sept. 14, 15, 16.

Tuesday, Sept. 14

- 10 a. m.—Executive meeting of the Trustees and Directors.
- 2 p. m.—Convention convenes.
Address of Welcome, Dr. George T. Moore, director of Missouri Botanical Garden.
President's address.
Secretary's report.
Treasurer's report.
Report of committee on Service Bureau Publicity Fund; committee on Quarantine bill No. 37; committee on School Gardens; committee on Interesting Young Men in the Gardening Profession; committee on Co-operation with Federal Vocational Board.
Communications and resolutions.
Consideration of next meeting place.
General discussion.
- 8 p. m.—Illustrated Lecture on "Rock Gardens," Montague Free, Brooklyn, Botanic Garden.

Wednesday, Sept. 15.

- 9 a. m.—Unfinished business.
Nomination of officers.
Subjects for discussion:
Examination for and classification of gardeners.
Inducements for Young Men to Take up the Gardening Profession.
- 2 p. m.—Subjects for discussion:
The Threatened Food Crisis; How Can the Gardeners and Their Association Assist in Relieving It? Will Farmerettes Solve the Problem of Help Shortage on Country Estates?
The Sign Board Nuisance Defacing our Highways; How Can it be Combated Effectively?
General discussion.
- 8 p. m.—Shaw Banquet.

Thursday, Sept. 16.

- 9 to 9.30 a. m.—Polls Open for Election of Officers.
Unfinished business.
- 10 a. m.—Adjournment for inspection of St. Louis' Park System, and visits to Missouri Botanical Garden and Country Estates.
- 8 p. m.—Annual banquet.
Members should communicate with George H. Pring, Missouri Botanical Garden, St. Louis, for hotel accommodations without delay.

S. Sargent, Mass.; Hubert T. Parson, West End, N. J.

NEWS NOTES

The engagement is announced of Miss Cecelia Roth Gross of Hartford, Ct., to Harry Quint, well known as a florist of Boston, and now connected with the Quint Tire Co. Miss Gross is prominent in Hartford society and her picture was published in the Hartford papers in connection with the announcement of her engagement.

Miss Edna Brown has opened a greenhouse at New Lebanon, N. Y., and is not only growing flowers but some vegetable plants as well.

Henry A. Wheeler, a resident of Newtonville, and prominent as an orchid grower, recently passed away at the New England hospital. He was the head of the firm of Wheeler & Co., conducting greenhouses in the Waban section of Newton for the cultivation of orchids and had grown a great many rare plants

Boston is to bloom out in its old-time tulip display next year. It is said that 27,500 bulbs for planting in the Public Garden, Boston Common, and other parts of the park system have been contracted for by the park department. The contract was placed with the F. H. ...

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am pleased to learn that many gardeners are growing a greater variety of asters. Some of the newer single asters in delicate colors have much to commend and are especially useful for cutting. The Aster Southcote Beauty representing a new race has become exceedingly popular across the water and is being grown to some extent here. This type, with long, perfectly formed petals and small golden yellow centers is ornamental wherever used, and it has long stiff stems often from 12 to 20 inches in length. There are some very delicate and wonderful shades of blue and pink, as well as pure white.

So far this year I have not seen many very good asters. Possibly the weather has not been conducive to the growing of these flowers and better results may be expected a little later. I am sure that the aster remains in as high favor as ever and that many cut blooms will be seen at the fall shows.

The Massachusetts Horticultural Society has already issued preliminary schedules of prizes for the great exhibition of roses and other plants to be held next April. This show promises to be an event not surpassed by any ever held at Horticultural Hall. There will be beautiful rose gardens with displays of rose plants, and appropriate accessories.

Artistic arrangement and general effect will be considered in making awards, of which there will be two, one of a thousand dollars and one of five hundred dollars. An arbor arrangement of climbing roses will bring awards of one hundred dollars and fifty dollars. An arch arrangement of climbing roses provides another competition, with prizes of seventy-five and forty dollars. All the other awards for roses are worth striving for. Besides the roses, there will be a great display of orchids, the awards including a special prize of a silver cup valued at five hundred dollars and offered by Albert C. Burrage.

I think there never has been a season when the hollyhocks have bloomed more gorgeously. Unfortunately they are beginning to show the bad effects of rust, probably as a result of weather conditions. It seems impossible to control this trouble, once it gets a foothold, although it helps much to grow the plants in new ground and to start

them each season. Apparently there is a renewal of interest in the hollyhock. In any event, it has been planted with great freedom this year, and it deserves all the popularity it is likely to attain, because it is one of the most useful as well as among the hand-somest of all garden subjects.

One of the English papers speaks about the enormously increased cost of getting exhibits to and from the shows. The same conditions obtain in this country, and are likely to have a certain effect upon the number of exhibits made. It would seem as though it might become necessary to increase the value of the prizes offered in order to keep up the interest, especially for shows where exhibits have to be shipped a long distance.

In his paper at the Conference in New York to discuss the quarantine Mr. Albert C. Burrage of Boston said some things I liked, among them these:

The government, people, horticulturists and horticultural societies of Massachusetts recognize the fact that the United States government, the United States Congress, the Department of Agriculture and the Federal Horticultural Board are seeking to foster and advance the horticulture and agriculture of the whole country, and that they are not trying to help any one interest at the expense of other interests.

We do not protest against the law or the quarantine. Still less do we

question the motives or intentions of those who framed the law or the quarantine of those who are enforcing them.

We do earnestly protest against what the Federal Horticultural Board, itself, calls its drastic provision, some of which we maintain are wasteful, inefficient, unsound and dangerous.

We do ask that the regulations of the quarantine and their enforcement shall be reasonable, effective and humane. We do ask that quarantine regulations of the government, acting for the benefit of the whole people, shall be conducted in the right way. We ask that the United States Government, with all its power and wealth, shall handle the business part of this subject in a business way, the sanitary part in a scientific way, and the human part in a humane way.

Massachusetts, with limited area and a very large and dense population, has a negligible amount of agriculture, almost wholly confined to the tobacco of the plains of the Connecticut Valley, the cranberry bogs of the sandy Cape district, the apple orchards of the hillsides, and the scattered hay meadows.

The wealth of Massachusetts lies in her people, in her institutions of learning, and in the manufacturing industries which she maintains in spite of her remoteness from coal fields and raw materials and the limited water power within her borders. She is enabled to keep her people and her industries here because of the unusually irregular topography of the state and its attractiveness for homes. The

covered, rocky and sandy hills. Massachusetts does want to protect her horticulture and she believes in quarantining against injurious diseases and insects; but she, long ago, found it necessary to act for the improvement of her horticulture and particularly to obtain trees, shrubs and other plants, which would advance and extend her horticulture and beautify her ground, making still more attractive her cities and towns.

Ninety years ago she established the Massachusetts Horticultural society, which consists of over a thousand members and which is believed to be truly representative of the horticultural interests of the state.

Nearly 50 years ago, within her borders, was established the Arnold Arboretum, the botanical department of Harvard College; and here a vast amount has been done for the horticulture of the whole country.

And Massachusetts, during a long period, has enacted many laws, seeking not only to improve agriculture, but also to protect and carry forward the science of horticulture in the broadest way.

We want protection against future danger to our horticulture and agriculture and to that of the whole country, but we do not want to be prevented from safely importing those trees, shrubs and plants which do not carry dangerous diseases or insects and which will give assistance, comfort, and pleasure to our people.

In this state, if we find a person who may possibly have smallpox coming into the port of Boston from a foreign shore, we do not send him through the streets of Boston in a crowded street-car, and then in a crowded railroad car to a contagious-disease building in the Berkshire Hills, a hundred miles away, in order to determine whether or not he has smallpox, and if he has, to keep him there until he is fumigated and recovered from the disease. We believe that the place to quarantine against dangerous disease is at the threshold, that is, at the port of entry, and we do it here and not in the Berkshire Hills.

My Biggest Asset is the Goodwill of My Satisfied Customers

BOSTON, MASS.

George Watson's Corner

"You in your small corner and me
in mine."

Big improvements are the order of the day at the Pennock Building at 16th and Ludlow street, Philadelphia this summer. Up to this year the main floor and basement have had to suffice for both the cut flower market and the ribbon and supply department. The second and third floors have been rented out to other businesses. But that policy has had to be abandoned and the whole building will now be occupied by the Pennock Company.

A new and larger cold storage plant is being installed in the basement covering all the latest, and most up-to-date scientific wrinkles, many of which are quite revolutionary as compared with the systems in vogue five or ten years ago. The balance of the basement floor is devoted to the storage of wire work, packing boxes, and various other supplies.

The street floor will be devoted to the various sales departments of the cut flower market and the cold storage rooms connected therewith. The main office will remain on the southern end of this floor, as at present, but will be given more room.

The ribbon and supply department will be moved to the second and third floors and the private office of the manager will be moved upstairs. The new show rooms, for the ribbons especially, has been long needed, and will be a great convenience both for customers and salesmen.

Florists baskets are also a big feature and there will now be ample

opportunity to show the new and improved styles for which this house has become famous all over the country. The basket department was small up to ten years ago, but it has grown to be of first importance, especially since 1914, and it is now the leader in the market for style, quality, and workmanship.

We congratulate the company on all these ocular evidences of prosperity here in Philadelphia, and wish them large and continued success. We understand that similar improvements in cold storage installment have been completed in their New York Store, 117 West 28th street, and that it also is up-to-the-minute in all the latest devices. Their Washington Store at 1216 H. street, will get the same equipment during August and September. The Baltimore Store at Franklin and St. Paul street, already had cold storage improvements, so it can consider itself the pioneer in this march of progress—the Progress of Pennock—the leading wholesale cut flower house of Philadelphia—and one of the largest—if not the largest—in the country.

Sometimes it is well to mention an old favorite, as well as once in a while to enthuse on the novelties. This was forcibly impressed on us by a visit to a friend's home at Chestnut Hill one day, when he pointed with pride to a fine climbing shrub he had against a wall twenty feet up—like ivy, but with small leaves, and producing in the fall red berries that last a long time. *Evonymus vegetus* is a very attractive shrub, and can be used as a climber. It is a form of *radicans* and perfectly hardy.

The nurserymen spell this: "*Euonymus*"—but Bailey says it's an ancient Greek word, and is spelled with a "v." So it's another case of spelling it "with a v Samivel—spell it with a v." And spelling of "*Samivel*" reminds us that Samuel S. Pennock says a fine lot of this *vegetus* has been grown by the

Conard & Jones Co. and that they are making a specialty of it. So any one who wishes to get a few nice plants of this, may take the hint.

Where shall we go to get anything inspiring? Where shall we go to get a new thought? A new idea? How can we make some money? Never mind about our eternal salvation. The present is enough for us. How can we make some money? Give us a new idea. In the olden days all these new ideas were born over a friendly Macpherson. Even the traditional self-reserved Macpherson, began to get human after the second, and if there was anything worth while in the neighborhood he'd tell you. But now. You can't even have a first, let alone a second. Which is the reason for the query—where can we get anything inspiring? Frank Ross, who has just returned from a Saginaw trip says try Quebec. He called there and he says its some city. Inspiration there is as heavenly as it ever was on the Gramplan hills or the highest mountains of Kentucky and you can put pep in your system and your business; think up new ideas; invent new methods and make yourself a leader in the world just as the Almighty meant you to be, instead of jumping around Sanson street in Philadelphia, and spending your time wondering when they are going to mend the crack in the Liberty Bell. The old bell was busted once, so the question is shall it remain busted? If we mend it where it should be mended it will not be in Quebec but in Washington. And to reach Washington we've got to start from home, every state in the Union from Maine to California. Listen to this: "The minimum of government and the maximum of individual responsibility; that is Charles A. Dana's definition of democracy.—Waco Times-Herald. The founder of the New York Sun had a head on him even if he did come from Boston.

BOSTON'S CONVENTION PARTY.

The following are the Boston mem-
bers of the S. A. F. who are planning
to attend the convention:

S. J. Goddard, Thomas Roland, Geo.
T. Elliott, E. Allen Peirce, Frank Ed-
gar, Herman Bartsch, Geo. Butter-
worth, Edward Welch, Messrs. Mac-
Donald and Dolansky, Wm. Sim and
Mr. and Mrs. B. Hammond Tracy.

The party will not go as a body.
Several of the men plan to leave Sun-
day night to join the New York delega-
tion, while others will leave Boston,
Monday, going direct to Cleveland.

A TOPEKA FLORISTS' SCHEME

According to a newspaper item, W. A. Bollinger, proprietor of The Rosary, a flower shop at Topeka, Kansas, has hit upon a new and very original advertising scheme. The plan is to provide a special room which has a seating capacity of about twenty-five, and quiet restful surroundings where the wedding ceremony may be performed. It seems that Mr. Bollinger has guaranteed that all weddings carried out in this room will be weddings de luxe, so far as flowers are concerned, it being his purpose to provide not only the best of his blooms, but also a bunch of flowers for the bride to carry which will excite the envy of all other Topeka damsels. It is stipulated, of course, that the flowers must be purchased from him. Mr. Bollinger seems to be a keen business man, and his arguments are not without weight. He says that church weddings are exceedingly costly, and that many persons cannot afford them because of the expense of the decorations. By accepting his offer, they can have as

elaborate decorations as may be desired, without extra expense. Mr. Bollinger figures out that he will get a large amount of publicity from the idea, although the weddings will be conducted, of course, with entire privacy. According to the newspapers, Mr. Bollinger, doesn't hold the matter wholly as one of business, but also feels a certain sentimental interest in the plan. I am sure that florists in other cities will be interested to see how the scheme works out.

TRADE EXHIBIT JUDGES

The following have been appointed as judges of exhibits in the Trade Exhibition:

Sections A, B and F. Plants, cut flowers, bulbs, seeds and garden requisites—Irwin Bertermann, Indianapolis; Fred. Meinhardt, St. Louis; Geo. Bate, Cleveland.

Sections E and G. Florists supplies, and miscellaneous exhibits—Chas. Russell, Cleveland; R. C. Kerr, Houston, Tex.; E. A. Feters, Detroit.

Sections C and D. Boilers and heat-

RESURRECTING DEAD DEBTS

Some Suggestions for the Florist Who Has Difficulty in Collecting Accounts

Where is the florist having a business of any proportions who does not possess a private graveyard wherein are buried an assortment of dead accounts which he has charged off to profit and loss? Like any other business man, the florist is bound to be stung. Perhaps, in fact, he is more apt to be stung than the average man in business because he deals in what the public terms luxuries, and the ordinary man does not feel very badly if he strains his account at a florist's shop.

Still a large proportion of the florists' losses might be obviated if the right methods were followed. Of course, the bill collector is a familiar gentleman, and is employed to a large extent. Sometimes, however, he costs more than the value of the collection to be made, and it is quite possible to do a large amount of collecting in a very successful way through the aid of Uncle Sam's mail service. A system has been worked out very fully by a Charleston concern and is described in the Retail Public Ledger. From the moment the debt is contracted, the concern holds, the debtor is a prospect—that is, a prospective payer.

"Never let the prospective payer forget that he or she owes you," is the

guiding principle. "Persist in advertising the debt until the prospect is won over."

Instead of waiting until the first of the following months, as many stores do, bills for purchases are mailed within a few days after the transaction. By this method prompt payment is secured from that blessed class of customers who pay their bills promptly and who would otherwise wait until the first.

In the Mails Promptly

Promptly on the first of the month statements of accounts are mailed to all customers on the books, the statements showing all balances and debits and credits of the preceding month. Most stores, of course, send out statements on the first, but the Charleston store makes it a point to mail the statements on the first day of the month and not on the second, the third, the fourth or the fifth day. In this way it keeps ahead of the competition of the statements that are mailed out later. It advertises the customer's debt before other creditors advertise.

Thenceforth the debtors are regularly reminded of their debts until the accounts are paid, or it is realized that they are so hopeless and worthless that a boll weevil seems like a silk worm in comparison. This does not mean that indiscriminate and incessant dunning is employed. Not at

all. Customers are given ample time to pay and only perfunctory reminders, such as regular statements or polite, meaningless letters, are sent at healthy intervals. This advertising for payments must be as unobjectionable as dunning can possibly be.

It is not until the account shows signs of neglect that special efforts are made. The problem then resolves itself into one of writing individual letters that will do the work. Here the fascinating part of the "advertising" campaign commences. The debtor is tackled first from one angle and then another, and it will be discovered by all creditors who persist that it is a terrifically hard-boiled customer who cannot be in some manner reached. The vulnerable spot is there except in very unusual cases. It may be in a hidden recess in the conscience, or it may lodge in the debtor's sense of pride or dignity.

Perhaps a unique attempt at reasoning may achieve the desired effect or a subtle appeal to the temperament may do the work. Even the customer who has been so indulged by other careless creditors that ordinarily he is impervious to requests for payment, can be won over. That weak spot must be discovered by the collection man. Persistence, combined with an inquiry into the occupation, general circumstances and nature of the customer, will eventually perform the miracle.

The secret may lie in a campaign of attrition. Here is a letter that succeeded after several other letters had failed to bring a favorable response from a customer who disputed a portion of the account, but had made no effort to pay any of it.

KILLS MILDEW - INDOORS AND OUT.

Now, in regards to your "Grape Dust," I must say that when I first heard of it I had but little faith in it, because I had tried all the remedies for Mildew I had ever heard of, but they were of little value. It seems that my location favors Mildew especially. When other Florists are but little troubled, my houses are generally well covered with the Mildew, so when I sent for the first keg of "Grape Dust" my Roses were almost worthless, but since using the "Grape Dust" my Roses are the "Picture of Health." F. J. A. SCHAEFER, Newburgh, N. Y.

"Dear Sir—This is the last letter we intend to write to you about your account. (Here, of course, the debtor, expecting a stern ultimatum, pricks up his ears.) If you do not pay, we will simply charge the amount off to profit and loss, forget all about it, and pray for better luck the next time. In view of your claim in reference to the extra material, we have offered to accept half the amount in full settlement, but you have seen fit to make no response.

"Unless you pay voluntarily we would have no resort save to law, but we prefer losing every cent of the account in preference to taking such a step. We have always prided ourselves on the fact that our customers are of the kind that do not need legal persuasion. We leave it entirely up to you.

"Yours very truly."

For some unaccountable reason, it happens that lawyers, usually on the alert to collect accounts turned over to them, are slow in paying their personal bills, exhibiting at times procrastination that would seem more appropriate to other professions.

At the same time, few professional men have more pride and dignity than

members of the legal profession. Thus a lawyer who was permitting his account to drag on without settlement was induced to pay by a letter asking that if he was unable to pay the entire account, would he be so good as to pay a portion, if possible? Promptly came back a check in full, to show doubtless that he was able to pay in full. Professional pride and dignity had to be vindicated.

"If your neighbor borrowed five pounds of sugar from you, and did not pay it back, you could appreciate how we feel in not receiving payment for goods purchased from us," was the vein of a cheery little note that induced a housewife to pay.

"Study the prospect," then, seems to be the chief need in tackling an account that is getting aged, just as we are told to study the prospects in advertising for patronage and purchasers.

"Don't ever give up an account for dead," states an official of the Charleston company, "until all signs of life have disappeared. Keep an obituary record, recording the names, amounts and dates of all accounts charged off to profit and loss. Perhaps the man who owes you \$50 now

and won't, or can't pay, may be wealthy four years from now, when you can start a second campaign."

Doubtless *salvia virgata nemorosa* is among the worthwhile plants which will be scarce for some time in this country as a result of the action of the Federal Horticultural Board, because in the past it has been customary to import most of the stock used from Europe. Fortunately, however, it is a plant easy to propagate, and there seems to be no good reason why a stock shouldn't soon be accumulated here. These plants are easily raised from cuttings, with the same treatment as any herbaceous perennial, and the cuttings root easily in heat if they are rather soft and in a growing state. When the plants are well rooted they should be potted up and kept in pots until planted out. This is really a delightful member of the sage family, its soft blue being unsurpassed by that of any other plant. It is to be hoped that measures will be taken by nurserymen to propagate it in a larger way for the benefit of small gardeners, and the stock be increased when possible on private estates.

BIG GLADIOLUS SHOW

Combination Exhibit at Boston the
Largest Ever Held in America

The Gladiolus Show held at Horticultural Hall, last Saturday and Sunday was the largest ever staged in this country. Also it was the best so far as quality of blooms and variety was concerned. To be sure, two or three large growers, like B. Hammond Tracy and J. K. Alexander, were missed. Yet the combination of the three societies, the Massachusetts Horticultural Society, the American Gladiolus Society, and the Massachusetts Gladiolus Society, assured a large display as well as heavy attendance. Both of the lower halls were filled to capacity with cut flowers, while the upper hall was given over to the Burrage Orchid display.

The latter was staged in a unique manner, each orchid plant being placed on a pedestal cut from the trunk of a tree. The result was not as effective as at previous shows, when the flowers have been massed, but the arrangement made it very easy for orchid lovers to study the different varieties. Among the new seedlings from Orchidvale, the establishment of Mr. A. C. Burrage, were Brassavola Diggyana and Brasso-Cattleya Eilene Low, the latter being named for Miss Low, the English orchid grower, who visited Boston last spring.

The gladioli represented the choicest blooms of many of the most noted growers in the country, professional and amateur alike. Among those whose exhibits attracted special attention were H. E. Meader, of Dover, N. H., president of the American Gladiolus Society. Mr. Meader had an especially fine showing of Primulinus Hybrids. Madison Cooper, of Calcium, N. Y., editor of the "Flower Grower" and a man who has done as much as anybody in the country to promote the interests of gladiolus growers, had a remarkable collection, which was notable in particular for its blues. Besides Baron J. Hulot, which was also shown in other collections, Mr. Cooper had a fine lot of "Heliotrope," which was the darkest blue of any gladiolus shown.

Theodore A. Havemeyer brought on a magnificent collection of gladioli, among them Golden Measure, a yellow of startling brilliancy which has been much commented upon the past year, and the tremendous spikes of which caused no little interest.

Charles F. Fairbanks, of Lexington, president of the Massachusetts Society and S. E. Spencer, of Woburn, vice-president, each had very large and handsome displays. Mr. Spencer

McHUTCHISON & CO. 85 Chambers St.
NEW YORK

showed a novelty in the form of a seedling with a distinct border which caused considerable comment.

Jelle Roos, formerly of Milton, but now having a large farm at Concord, made an extensive exhibit. Among the promising seedlings shown were several on the tables of C. W. Brown, of Ashland, who showed about a hundred varieties, a large proportion of them seedlings of his own growing.

As usual, W. N. Craig, of Faulkner Farm, and Miss Marian Roby Case, of Hillcrest Farm, Weston, had large and unique exhibits. Mr. Craig had an especially fine collection of vegetables, as well as of gladioli, and Miss Case showed vegetables, fruit and dahlias. Her peaches attracted particular attention.

The list of prizes and gratuities awarded follows:

AWARDS FOR FLOWERS. Hillcrest Prizes. Gladioli Vase of six spikes. White. 1st, H. E. Meader, Lilywhite. 2d, L. L. Proctor, Gentry of Holland. 3d, H. E. Meader, White King. Vase of six spikes. Honorable Mention: Faulkner Farm, New Tomato No. 10.

Vote of Thanks: Hillcrest Gardens, Chinese Egg Plant.

One of the most remarkable gladioli shown was a new seedling from Kunderd, which was given a silver medal by the American Society. This remarkably dainty little flower is white, edged with pink. Gold, originated by Dr. Hogge, received the first prize in the yellow class, and attracted much attention. Golden Measure, shown by Theodore A. Havemeyer, was remarkable for the extreme stoutness of the stems and the size of the spikes.

In the blues, nothing was better than Muriel, also shown by Mr. Havemeyer. Heliotrope was another blue shown in excellent shape.

Mr. A. L. Stephen was awarded a

silver cup each for Mrs. Dr. Norton and Mary Sennell. Mr. Kunderd, who originated them, said that he never saw better specimens.

Dr. Bennett, President of the St. Thomas, Ont., Horticultural Society, had a remarkably fine general display for which he received a medal. Mr. H. E. Meader, of Dover, N. H., received the American Society's medal for the best seedling. He also received a certificate of merit from the Massachusetts Horticultural Society for his seedling Red Cross. Mr. Meader's Lily White won first in the white section.

Mrs. M. B. Hawks, of Bennington, Vt., received the Kunderd gold medal for the best display of Kunderd varieties.

ANNUAL MEETING OF THE AMERICAN GLADIOLUS SOCIETY

The American Gladiolus Society held its annual meeting on Saturday afternoon at Horticultural Hall, Pres. H. E. Meader, of Dover, N. H., being in the chair. As the officers of this society hold office for two years, no election took place. Prof. A. C. Beal offered his resignation as secretary, in order that he might have more time to devote himself to plant research work, but the society refused to accept the resignation and after much urging Prof. Beal agreed to continue his work for some time longer. Mr. Theodore

L. J. REUTER CO. *Plant Brokers* 15 Cedar St., WATERTOWN STA.
BOSTON, MASS.

Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

A. Havemeyer, of New York, was a member of the Nomenclature Committee, and Mr. J. H. Prouty was elected to the Executive Board in place of Mr. Bonnewitz, who had resigned.

The report of the treasurer showed the society to have made healthy growth and to be in a good financial condition. Considerable discussion was given to the matter of the plant quarantine. There was a division of opinion, but sentiment seemed to be stronger against the quarantine than for it. No definite action was taken at the meeting, but probably the association will have a representative at the next conference.

Invitations to hold the next meeting in New York and at St. Thomas, Ont., were received. The place of meeting will be decided by the executive committee.

The annual report of Secy. Real was given as follows:

REPORT OF THE SECRETARY

There are now 351 names on the rolls of the American Gladiolus Society. Of these there were 270 paid up members in 1919-1920. Some are now sending last year's dues with their remittance for this year. Thus it will be seen that actual paid up membership is somewhat fluctuating, but as a rule few members are dropped for failure to send in their dues. This shows a good live membership and it should be our purpose to increase it to a minimum of at least 500 members which would enable the society to extend its activities. There have been inquiries concerning life memberships which this society has not as yet provided. The Executive Committee should be directed to consider and report upon this question. Last year the society voted to eliminate the initiation fee and our experience thus far indicates that it was beneficial to the society.

The society was represented at the recent conference held June 15, 1920, to consider Quarantine 37 and its possible revision. It would seem desirable that this subject be discussed and some action taken by the society.

Among those of our members taken by death during the past year was

PRES. MEMBER OF THE AMERICAN SOCIETY

Maurice Fuld, a charter member of our society as well as one of our most active members. Mr. Fuld was always interested in gladioli and when possible he never failed to attend and to take part in our meetings. His live personality and his keen enthusiasm for the advancement of floriculture will be greatly missed in florist meetings.

Another man pre-eminent in his profession, who recently passed away was Patrick O'Mara of the well known firm

of Peter Henderson & Co. The writer can vouch for Mr. O'Mara's interest and great knowledge in gladioli from correspondence which he had with him. He had great talents of leadership and his wise counsel and forceful personality is very much needed at the present time. His interest covered the entire field of American floriculture and his death creates a gap which it will be difficult if not impossible to fill.

MASSACHUSETTS GLADIOLUS SOCIETY

A meeting of the Massachusetts Gladiolus Society was held at Horticultural Hall, Saturday afternoon, President Chas. F. Fairbanks being in the chair. The most important action taken at the meeting was a vote to change the name to the New England Gladiolus Association, and to make an effort to extend the membership throughout the New England states. It was believed that this will make the organization much stronger and able to do more effective work. A committee was also appointed to consider the nomenclature of gladioli, to prevent misnaming, and to do away so far as possible with the dissemination of worthless varieties. The committee consists of Mr. S. E. Spencer, Woburn; Mr. Jelle Roos, Concord; Mr. John C. Zeestraten, East Bridgewater; Mr. R. R. Walker, Mansfield; Dr. S. Irving Moody, Brockton, and Mr. A. L. Stephen, Waban. The old officers were re-elected as follows: President, C. F. Fairbanks, of Lexington; vice-presidents S. E. Spencer, Woburn, and John C. Zeestraten, East Bridgewater secretary, R. R. Walker, Mansfield, and treasurer, Clark W. Brown, Ashland. Another meeting will be held in November, at which it is expected important action will be taken.

THE TALK OF THE TRADE

For two years past, buyers of field-grown carnation plants have been warned early that there would be a short supply, and that warning was found to be true in each case, but this year is not any different, in fact, I am waking up to the fact that the supply is less this year than at any time in my memory; and to make matters worse, field-grown plants have been small and of poor quality in general. Of course, anyone can get Matchless, it is to be found everywhere; but out-

side of that variety there is a decidedly short supply.

I also find that with few exceptions the plant houses are away behind other years. Anyone who hasn't bought up to this time and still expects to get field-grown plants I advise to get busy without delay.

I was quite taken back about a year ago when I learned from Mr. James Wheeler of Natick that he proposed to grow Godfrey callas planted right into

the ground without any made-up beds, artificial drainage or anything of the kind under them. A number of other growers felt the same as I did; we thought they would be inclined to run to foliage with very little flowering tendency, but those visitors who saw the house of Godfrey callas last year any time during the winter and away into spring know very well that it turned out results.

When I called on Mr. Wheeler a few days ago, I found he was so well pleased that he was going to repeat this same method this year. He told

Attractive Arrangement of Gladioli

me that he tried to dry them off enough so that they would take a rest, and even by closing the ventilators and running the temperature on sunshiny days away up to an extreme heat, he was unable to stop them from growing, so it was necessary to go in with a scythe and cut them back. This house of plants now stands in very good condition. It has a very moderate top dressing of manure, and that is all that has been done to them. They are coming along in fine shape, and unless I miss my guess there will be good results again this year, in fact I look for better than last year.

A trip into DeVito's Conservatories, Wakefield, Mass., will show a big change since Mr. DeVito took possession. He has the houses in good condition and his crops are all standing well. Mr. DeVito is evidently a good grower and I don't think there is any doubt that he will succeed at Wakefield and turn out crops which would be a credit to anyone.

I have mentioned before that in my opinion adiantum would be a fine crop to grow around Boston, and I still feel sure that my advice is right. When I called at M. A. Patten & Company's place last week I found there several

EXCLUSIVE FLORISTS RIBBONS AND SUPPLIES

houses of adiantum in wonderful condition. I don't see how anyone could grow it any better, and they told me there that they couldn't begin to take care of the demand. They could easily take on several more customers if they had the stock. Of course, at just this time cut fronds are not moving so fast, but fortunately this is a crop that can be left standing until the market is right.

Patten & Co. have their houses full of carnations and are ahead of last year, in fact their stock all the way through is in very good condition. The plants are not extra large, but of good size for this season. They have just finished the installation of a new pair of boilers for heating purposes and are fortunate in having a good part of their coal already in, so they have a good start for business the coming winter.

Certainly the Washington florists are progressing. There are few cities from whence come so many enterprising reports. Just now I learn that the Florists' Club of Washington has begun a project to furnish flowers for the military burial of every body returned to Arlington Cemetery from Europe. The Club has made public an offer to all of the Washington war mothers to carry out such an undertaking, and has requested their cooperation in the work. Mr. J. Harper Hetherington, president of the club, says that the florists of Washington feel very proud of the records of Americans on the battle fields of France, and wish to do everything in their power to show respect, loyalty and sympathy.

I understand that the "Say It With Flowers" week was such a success last year tht the Washington florists are planning to duplicate it again this season, but they are going to change the program somewhat and have a Chrysanthemum Show at the same time, held in honor of the Chrysanthemum Society of America. I am informed correctly this show will be held in November, and an active com-

mittee is already at work upon the details. By the way, I wonder how the general proposition of a "Say It With Flowers" week will be considered throughout the country this year. In some places it was a success last season, but in others very little enthusiasm was shown and naturally the results were not very satisfactory. I understand that John Scheepers Co., New York, has been remarkably successful in disseminating the La France raspberry. I am told, in fact, that enough orders have come in to take every plant available. It seems that the high quality of the fruit has given the new berry wide popularity already.

THE LACE FLOWER

In the heart of every flower lies a secret. The dainty lavender flower in my garden shows that the secret of Queen Anne's flower as some wizard saw the purple spot in her white lace and from it bred a flower more dainty than that of the wild carrot or Dancus Carrota, yet retaining its manner of growth.

Last winter this flower was largely catalogued as the blue lace flower. It is not blue, but a lavender suggesting stokesia. It is better so, for we like to think of old lavender and lace.

This is a new flower bred from one which came originally from Europe, but which is now growing wild among us, making pretty birds' nests as it seeds. Yet as we look at this exquisite new flower with the dainty sparkle to its bloom we think of ladies of an older day when Nathaniel P. Willis and Charles Sprague wrote. We will leave the rosebuds to the debutantes, the daisies to the children, but let the old ladies tuck these dainty blooms into their white kerchiefs holding them in place by their cameo brooches over their black satin gowns. Are there any such dear old ladies left? Remember there is a sparkle to these lavender blooms.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

We think it was a good plan to divorce the Gladdened meeting of the American Gladiolus Society by Glads from the convention of the S. A. F. The gathering in Boston last Saturday and Sunday was much more satisfactory in many ways than the session held in conjunction with the big convention. There was a better opportunity for good displays, and less confusion all around. The fact that the American Society and the Massachusetts Society, in connection with the Massachusetts Horticultural Society, could get together for a united display, and for the fraternization of members, was a distinct gain. To have the national society meet with any state society is helpful to the latter, and we feel that the gladiolus growers of Massachusetts will benefit materially as a result of these sessions. The gladiolus has become such a popular flower, both with private growers and among conventional florists, that it naturally awakens a great amount of interest when placed on exhibit. Mention of the most notable among the newer varieties is made elsewhere, but perhaps a word of comment is not out of place concerning the *Primulinus Hybrids*. This class has been improved greatly, especially as regards the size of the flowers. Presumably before long they will appear numerous in named varieties. They certainly are among the best accessions of recent years.

While without doubt the main purpose of Show Decorations a flower show is to display flowers, yet it seems to us that it would be adding much to the popular value of the exhibits if a greater attempt were made to decorate the hall itself. Of course, this is done, and done very well, at the spring flower show in New York, and at some other exhibits, but as a rule the committee is contented to stop when it has provided tables or benches and holders for the flowers.

Now take the case of the gladiolus show just held in Boston. Without doubt many of the growers in New England would have been glad to contribute large numbers of "glads" without regard to variety, for the mere adornment of the hall. The flowers might have been massed in the corners or better still displayed on raised platforms or on shelves, and other decorations might have been added to form a picture of great beauty. This sort of thing, while it might not appeal especially to expert flower growers and those who are familiar with different varieties, would certainly attract the men and women who love flowers simply as flowers, and are charmed by artistic effects, even though they may have no expert knowledge regarding the blooms displayed.

It also seems to us that at the popular shows there should be a more complete labeling of the flowers for the benefit of the uninitiated. With signs marking the different groupings, as for example, the *Primulinus* hybrids, or large collections of named varieties, seedlings, and the like, the amateur visitor would get a much more comprehensive knowledge of the whole exhibit. Many people go to these shows for the express purpose of choosing blooms which they would like growing in their gardens, and sometimes they are handicapped because of the incomplete labeling.

Some very interesting points were taken Nomenclature up by Professor A. C. Beal, chairman of the Nomenclature committee, at the

meeting of the American Gladiolus Society, last Saturday. Prof. Beal had concrete facts to back up the oft repeated statement that there are a great many more names for different varieties than there are varieties themselves. This applies not only to gladioli, but to other flowers as well. He says that when the peony collection was assembled at Cornell, it was supposed that there were 1,600 varieties, but when the committee finished its work, there were only between four and five hundred distinct sorts in the entire collection. In other words, there were 1,100 good names on the waiting list. In one case a certain variety appeared under eleven distinct names.

Prof. Beal also pointed out that while it no doubt would be desirably to have some sort of bureau of registration at Washington, as has been advocated, yet the effort to secure and fix distinct names is only a small part of the question. Trial grounds are needed, carried on by selected growers, where all the leading flowers can be established. In the Professor's opinion there should be a central recording office which should register varieties after these have been passed upon by experts, either while growing on a trial ground in neutral control, or on exhibition before the members of a special society interested in the flower, or by both means. In this way the possibility of remaining any flower, innocently or purposely, would be reduced at least to a minimum.

We think that Prof. Beal is right in expressing the hope that the various societies will keep this matter under their control in so far as the determination of what varieties shall be recorded or registered is concerned. The list of gladioli has been growing with great rapidity of late years, and over a hundred varieties are offered by five or six growers. It has been said that there are altogether 600 named varieties. In any event, the list is too long, and it may be that Prof. Beal is right in saying that 150 varieties ought to be extensive enough. Of course improvement is desired, but as new and better varieties are grown, it should be possible and probably would be advisable to retire the more inferior sorts, and this is good logic as it applies to peonies, dahlias, and other popular flowers.

CONNECTICUT NURSERYMEN'S ASSOCIATION

The Connecticut Nurserymen's Association held their summer outing at Lake Compounce, August 11, 1920.

Owing to the inclemency of the weather the attendance was not quite so large as usual, but those present enjoyed the outing and especially the "get-together" part.

It seemed to be the universal opinion that the other nurserymen and florists of the state—not now members of the Association—were not aware of the benefits they could derive from attending the meetings and outings of this Association, or they would make more of an effort to accept the cordial invitation, sent them, to convene with us.

These "get-together" meetings certainly do make for the betterment of any line of business. They are educators, they are friend makers, not only in the line of business but socially as well, and the short loss of time, in attending, is repaid a hundred-fold in the benefits gained.

We hope, therefore, that the Connecticut Nurserymen and Florists will make a strong effort to accept the next invitation sent them to attend a meeting or an outing of this Association.

At a short business meeting (the regular annual business meeting early in the year had to be postponed owing to illness of officers) it was voted that the present officials continue in their respective offices until the next regular annual meeting in January, 1921.

The present officers of the Association are as follows:

President, C. F. Brainerd, Thompsonville, Conn.; vice-president, H. W. Gotschalk, Manchester, Conn.; secretary, F. L. Thomas, Yalesville, Conn.; treasurer, W. W. Hunt, Hartford, Conn.

F. L. THOMAS, Secy.
Yalesville, Conn.

NEW ENGLAND

The Gardeners' and Florists' Club, of Boston, will hold a field day on Saturday, August 28, at North Abington. They will visit the nurseries of W. H. Wyman and those of Littlefield & Wyman. Both these nurseries are very well known, and are filled with a great amount of high class material, so that this outing should prove of exceptional

interest. Both nurseries are only a short distance from the North Abington station and those desiring to attend but who cannot make the trip by motor can take a train leaving the South Station at 1.30.

Mr. William Slater, the well known florist of Springfield, Mass., with his wife and store manager, Miss Barker, have been enjoying an automobile trip through the White Mountains.

A new flower store has been opened in Worcester, Mass., by Mr. Stephen Bonic, formerly of Los Angeles, Cal., where he was connected with the Broadway Floral Co. The new establishment is at 21 Pearl street, opposite the Randall Store.

GENERAL NEWS NOTES

It is reported that the Blind Floral Co., of Pittsburgh, has secured a large

tract of land from Ernest C. Darvin, together with 17 greenhouses and several other buildings. The establishment is located in Ross township and the price paid is said to have been about \$50,000.

Arthur G. Frost, of Portland, Me., has sold his greenhouse and other property to Louis W. Phinney and Ralph L. Gustin. It is understood that the property sold for about \$30,000.

The Trimble & Oppeneer Floral Co., is a new concern at Lancaster, O., as a result of the purchase by Charles M. Trimble and Herman Oppeneer of the W. E. Gravett establishment.

The Long Island Floral Co., formerly located at 48 Willoughby street, Brooklyn, is now at 331 Jay street. Mr. Louis Michel, the proprietor, is expecting to do a large business in his new location.

Flowers Under Glass

This is a good time to buy plants for the Christmas trade. You can well afford to stock up with poinsettias, cyclamens, primulas, ardisias, ferns, palms, adiantums and screw pines. These are plants for which there is almost certain to be a good call during the holidays.

It is also time for planting freesias for early results, and experience has shown that the long, thin bulbs grow faster than the thick, heavy ones. With most florists it is not a matter of having a big output of freesias at any one time, but of having a continuous succession. Consequently planting must be done with this thought in mind. Have the rows four inches apart, and space the bulbs an inch apart in the rows. Soon after September the bulbs will start into growth quickly, and you should give them full light as soon as the shoots appear above the soil. You will find the bulbs doing well in benches such as are used for carnations and mignonette, with four inches of soil. You must remember that after they get well started they like to be fed liberally.

If you want to get good, symmetrical plants of Begonia Gloire de Lorraine, you should give them plenty of room. They grow fast now, and must be handled carefully. It is well to tie them up after they get good size. This is best done by placing a stake in the center and using loops of raffia placed loosely around each shoot. If you have any plants that have not had their final shift, do the work at once, but do not keep them too heavily shaded from now on. The plants like a compost made of three parts turfy loam, two parts of sand, and one part of well rotted cow manure.

You must be sure to keep your plants of nephrolepis from drying out. At the same time you mustn't keep them too wet. Many of the ferns in houses which are well cared for have made a great mass of strong, erect frondage, and this is an excellent time to get them into salable form. Ferns give good results in a compost made of three parts fibrous loam, two parts leaf mold and one part well rotted and sifted cow manure. Be careful about having pots that are well cleaned, and good drainage is imperative.

Benches that have not been planted to roses should be filled at once so that the plants may get well established before fall. Don't, however, make the mistake of getting the benches too full. Most roses will do well in five inches of good soil, which gradually firm down to four inches. More soil can be added if it is needed, but it is much more difficult to remove soil if there is too much. Try to go over the plants after they have been knocked out of pots to remove all spots that you can find. Sometimes growers do this work after the roses have been planted, but this is a poor custom, as there is danger of bringing the spot into a new house. Precautionary measures are of more value than any remedies which can be used later. If green scum has formed on the ball of the plant while in the pot, be sure to rub it off, but do not take too much of the ball. If you simply rub off the surface, that will be sufficient. When late planting is being done, see that the ball is not broken, as is likely to happen if the plants are pressed into the soil. This plan is followed by some growers, but it is a poor one, for many little roots are most certain to be torn, with the result that the plants get a check. If the ball is kept intact, on the other hand, growth will be started quickly and will go on continuously. Most good growers use a trowel with which they make a hole large enough for the ball, and then set the plant, carefully firming the soil around it. If you are using old plants, see to it that the roots are spread out properly so that they will not be bunched up. Sometimes you see a grower bunch up all the roots so as to make a ball, and then stick the plant into the ground. To a good grower this looks either like ignorance or laziness. Anyhow, it shouldn't be tolerated in these days of high priced plants.

Before long you will begin to need lime at night after watering and syringing, especially in houses that were planted early, and where the plants have made some growth. Air slacked lime is a great help in any house, but it is best to have it well screened so that it can be used readily in a pair of bellows. With bellows you can blow the lime under the plants, but of course you will be careful not to use too much powder, for here as in other respects it is possible to prevent waste and so save money.

George Watson's Corner

"You in your small corner and me
in mine."

Even in these mid-summer days a visit to Craigs at Norwood is interesting to the flower lover. One of the leading features that attract attention is the four big houses full of cyclamen and splendid looking plants; they are in the pink of condition. In the solanum department they have eight or ten of the most up-to-date varieties, many of them already showing fruit in green, blue, mauve, or red. Mr. Murdock and Mr. Cox are to be complimented on the fine condition of the crops in general all over this extensive department. Michael Bogan also deserves a good word. He has charge of the begonia department. *Areca lutescens* is about the only palm grown here in quantity. They make a specialty of it and find a big demand for good sized plants, especially among southern florists.

Probably the largest block of fancy dracenas in the country are to be found at Craig's, including all the brightest and best varieties for florists' use, among them being the new and beautiful dracena Longi, the favorite Massangeana and Killeriana, and about a dozen other fine varieties.

P. B. Mingle & Co. are the oldest in the grass and clover seed line in Philadelphia and they still hold their reputation for reliability and integrity. What Landreth and Buist and Dreer stood for in the vegetable and flower seed line, Mingle stood for in grass and clover seeds. And they are still there at their old corner, Front and Market, live as ever after three quarters of a century. There are no Mingles there now but the old Mingle spirit of truth, honor and courage to walk the path of right, hovers over the younger blood which now rules the destinies of the old firm. They still do a big business, both export and import and their home trade extends far beyond local lines. John W. Koch is now the ruling spirit in the company and few know the inside of that line of trade better than he does.

Edward Reid, who sailed on the *Imperator* July 15, reported from Southampton, July 24, "All well and a fine voyage." He will spend the next three months visiting the horticultural centers in Ireland, England and Scotland, and expects to return early in October.

salesmen and attendants for the occasion.

Elmer Weaver is among the first with Pilgrim in the Philadelphia market. Who said Lancaster county was slow? Bmmmm! Bmmmm! Bzzzzzz! Bmmmm! Bz!! Ronks!! The bees have been moved to Hog Island; but there is still left a little "beesiness" in Lancaster county. The Pilgrims are a little pale; but pretty good for August—just the same. Wait till you see them in the cooler weather. Oh, boy! They will be some Pilgrims then! Some rose! All hail, Montgomery!

We have heard nothing as yet about these other good ones that were introduced this year: John Cook and Crusader—perhaps we will be hearing about them a little later.

And we have heard but little of some other of the wonders—for instance: that fine one of Alick Scott's; and that other one by our Canadian friend, Frank Dunlop. We believe there are developments there of the most interesting nature. If we were an old rosarian like John Burton, who showed us, and whose sons are still showing us, what American Beauty amounts to, when grown by a master hand we would be sitting up nights figuring out the merits of these new ones; commercially first of course; then for the glory of the rose, in all other stages—whether professional or amateur.

But speaking of John Burton, the great pioneer in the American Beauty industry, we must not forget that he announced his retirement a number of years ago. He asserts that now he is only a message boy for his family, and has little say in what goes on, whether it's in the George Burton place, or the Alfred Burton place. These are all on their own hook. Both of them have been very successful for many years and we take our hats off to both George and Alfred.

So, no doubt, all these clever rosarians are figuring things out, and if we could only get John Burton to tell us something it would help. But like all clever business men, he is very non-committal when we run up against him on that point.

August 11th the Robert Craig Co. reported that two-thirds of the greenhouses at the old 49th street place had been removed so there seems little doubt that the contract agreement of "all out by Sept. 1st" will be a matter of easy fulfillment.

Robert Craig, senior, paid a flying visit to Philadelphia on the 8th inst. He returned to his seashore home at Ocean Grove on the 11th inst.

Speaking of new roses the latest sensation is the fine specimens of Dunlop being sent in by the Zieger Company. These have taken the market by storm and were sold on sight at fancy prices. There has also been some good cuts of this variety from the Leonard place at Lansdowne. Jake Deutschy is very enthusiastic over the new comer.

Steve Mortensen is sending in some fine stock of the new rose Pilgrim to the Pennock Co.

Fred Lautenschlager, the popular secretary of the Chicago Florists Club, sent me one of their printed circulars inviting everybody to come by way of Chicago to the Cleveland Convention. I think this was kindly meant; but, my goodness, does he insinuate that Philadelphia is so slow as all that—to go around by the way of Chicago to get to Cleveland. That would be sarcasm for sure if he really meant it; but, let's give him the benefit of the doubt. Otherwise it was a very good circular and worthy of its wide-awake author.

The Cleveland Convention

Roland for President—Washington Chosen for Next Year—Biggest Trade Exhibit Ever Held

Cleveland has been owned by the florists of this country all the past week. While the convention of the S. A. F. this year was not the largest ever held, yet the attendance has been very good and much interest in the development of the organization was shown. Without doubt the trade exhibit was the best which has ever been seen at any of the conventions. Comment to this effect was heard on all sides.

Some of the best known faces were missed this season, P. Welch and Henry Penn of Boston being among those absent. Other Boston men, however, notably Thomas Roland, S. J. Goddard and E. Allan Pierce were active, and many of the members were glad to welcome Edward Welch, prophesying that he would follow in the footsteps of his father.

The opening sessions were carried out as per the program. President H. P. Merrick of the Cleveland Florists' Club welcomed the delegates in well chosen language and ex-president J. F. Ammann responded. President A. L. Miller then made his address, which was in part as follows:

Address of President A. L. Miller

After an interval of twenty-four years, we are again meeting in the Forest City, Cleveland, one of the most important cities on the Great Lakes. Many of us who were present at the previous meeting are impressed with the marvelous advances made in the city of Cleveland in little less than a quarter of a century, not the least of which is observed in the development of our own industry. Our society has, too, advanced in this period of time. The recorded membership for 1896, the year of the last convention in Cleveland, was in the neighborhood of 800, while today, I believe, we are approaching closely to the 3,500 mark, an advance upon which we may surely congratulate ourselves. Still, we have not advanced to the extent that we should have done. I fear that we are somewhat behind the average of trade representation to be found in other industrial organizations, whose interests are not greater than our own.

Reconstruction of Business

In the reconstruction of business following the war, it cannot be said that the florist industry has been affected very much except in the shortening of available help. The scarcity

THE NEW OFFICERS

On Wednesday the following were nominated unanimously:

President—Thomas Roland, Nahant, Mass.

Vice-president—Adolph Gude, Washington, D. C.

Secretary—John Young, New York City.

Treasurer—J. J. Hess, Omaha, Neb.

Directors nominated were as follows: Thomas Joy, Nashville, Tenn.; Carl Hagenburger, Mentor, Ohio; Harry Papworth, New Orleans, La.; Henry G. Berning, St. Louis, Mo.

PRES. THOMAS ROLAND

of labor has been and is a serious problem for many of us, and doubtless there are many who had arrived at a point where they expected to take things easy from now on, but who have been obliged to get back into harness without thought of relief in the immediate future. The high prices of iron, steel, glass, lumber and other material pertaining to greenhouse building have stood in the way of additions to existing plants and of the establishment of new plants, but those of us who must of necessity build, rebuild or expand, may as well meet conditions, for no one can foretell the time when they may change, and in the meantime opportunity counts for a good deal. We have not yet reached the apex of the florist business, and, in my opinion, we never can, for there isn't any apex to it, at least as far as we can judge at this time. Reconstruction has not won-

derful to remark, hindered the florists, it has only made us adapt ourselves to conditions.

The Plant Quarantine

At the last convention our society went on record as opposing the Quarantine Order No. 37. Our opposition against the order was based upon the belief that such a drastic order was unwarranted through conditions as stated, and would work injury to our industry. The action of the society has been endorsed by several other organizations interested, to such an extent that there is now organized opposition to the Quarantine, not so much to the object of it, but as to the manner in which it is enforced and the power the Federal Horticultural Board assumes. The fact that florists can make the best of opportunities presented through stock which is more or less staple in this country is poor argument in favor of this quarantine. It is true that, under certain conditions, growers may bring in limited stock for purposes of propagation, but few growers would risk such importations under the inspection requirements as laid down by the Board, which necessitate delays in delivery fatal to most stock. Our Committee on Tariff and Legislation have this matter well in hand and are watching its development closely.

Reducing Cost of Flower Production

All growers have in the last three or four years had to look closely to their production cost. In the operation of a range of glass the heating cost is a subject occasioning much thought, and in working out conclusions, we are left largely to our own theories and experiences, although occasionally, as at our conventions, we find opportunities to discuss with our brethren our pet ideas in regard to economies which we believe we can effect. With many others, I hold the opinion that an impartial investigation of heating installations and methods of operating them if properly carried out might be productive of a basic system of heat production, which would entail minimum cost for fuel and result in maximum efficiency. Through insufficient knowledge many of us suffer fuel wastes which might be avoided. I am quite aware that an investigation such as suggested, would, necessarily, be attended with considerable expense, and

would be beyond individual effort, but an organization such as the S. A. F. and O. H. could possibly evolve a plan whereby investigation would become possible, and I recommend that a committee of three or more be appointed to consider ways and means for promoting it.

New Organizations

Since the establishment of our society there have been various other societies formed for the advancement of horticulture, mainly along special lines, or in the interests of certain flowers, and some of these organizations are affiliated with our own body. At this convention there is a movement to establish another organization different in character, but with objects, according to its proposed constitution and by-laws, identical with those of our own society. This new organization, if perfected, is to serve as a parent body to a number of local organizations. I refer to the proposed National Flower Growers' Association.

Originally, I believe this association, promoted within our own ranks, was to be formed for the purpose of providing means for obtaining publicity for flowers through the inauguration of local publicity campaigns, a portion of the funds collected for this purpose to be set over to the use of the National Publicity Campaign for national publicity, just as local organizations in Western New York, St. Louis, Texas and, I believe one or two other cities, are doing.

While no discouragement should be given to any such movement, I am of the opinion that none of the functions

of our own society should be abrogated. As a national body, we should be able to take care of all the industrial problems likely to arise in the promotion of floriculture commercially. It is not hinted that local problems cannot best be solved by local bodies, but surely one national or parent body might be considered as sufficient. I am not convinced that the work laid out for the proposed new organization is outside the scope of this, the parent organization, although I am now and always have been in favor of local bodies in affiliation with the S. A. F.

Do not let us rock the good old S. A. F. boat any more than is necessary. We are proud of our offspring, specializing as they do along particular lines, but I am not sure that another organization with objects almost identical with our own can do more than split our work and lead to rivalry which in the end might be disastrous to one or both.

REPORT OF THE SECRETARY

It is pleasing to report at this convention that the Society made considerable headway in the year just closed. Our membership has increased materially. Since August 1st, 1919, and up to August 10th this year, we have taken in 609 new members. Within the same period we have added 848 to our life membership roll. Our total membership is 3,311 of whom 1,509 are life members. This latter total, necessarily, includes a number of members who have not yet made good for their 1920 standing, but we have always this problem to contend

with when we have occasion to go into statistics. I might say, however, that defections from our membership are less now than they have been for some years. There evidently exists a better feeling in regard to keeping up a membership in the Society, and it is hoped that in the future our "dead-wood" will materially decrease. Our dues now are \$5.00 per annum, but it has not yet been found that the increase from \$3.00 has been detrimental. A great deal of missionary work has been carried out in the secretary's office, and the results are shown in the increase in our membership, and particularly in the additions to our life membership list. A few of our state vice-presidents this year have made considerable effort to add to our membership, and their results are worthy of our appreciation.

Our Administration Offices

The prospect of a material advance in office rental, and the need for more working room led to our taking in, April last, office quarters in the Sixth Avenue Building, in New York, in the part of the building occupied by the new wholesale flower market. This has proved to be a wise move in every way and brings the offices in closer touch with the trade, and especially with florists visiting New York. The offices are headquarters at all times

KILLS MILDEW - INDOORS AND OUT.

Now, in regards to your "Grape Dust," I must say that when I first heard of it I had but little faith in it, because I had tried all the remedies for Mildew I had ever heard of, but they were of little value. It seems that my location favors Mildew especially. When other Florists are but little troubled, my houses are generally well covered with the Mildew, so when I sent for the first keg of "Grape Dust" my Roses were almost worthless, but since using the "Grape Dust" my Roses are the "Picture of Health." F. J. A. SCHAEFER, Newburgh, N. Y.

for such visitors, and for meeting purposes, both for our own committees and those of affiliating and auxiliary societies. We have now ample room for our detail work which as we progress necessitates space, and we are able to accomplish more and at less expense than was possible in the limited quarters previously occupied.

REPORT OF GEORGE ASMUS, CHAIRMAN NATIONAL FLOWER SHOW COMMITTEE

My report will be to cover the activities of the National Flower Show Committee since the Convention of 1919, held in Detroit. There was one meeting of our Committee held since that time in New York City, March 17, 1920.

While the New York Spring Flower Show was in progress, after going over places that would be logical for the next National Flower Show, the City of Cleveland was selected as most desirable, in view of the fact that

there is in a course of construction a few blocks from the place where we are now holding our meeting, a wonderful building with plenty of space available.

Easter in 1922 falls on April 16th. The Committee selected for the dates of the Show, to open Saturday, March 25th, and close Saturday, April 1st. Thus far the Committee has had a preliminary schedule set up and printed in galley form, and as soon as definite arrangements are completed for the building which we hope will be very soon, the preliminary schedule will be mailed broadcast.

The premium list prepared, is based on an expenditure of \$20,000.00. This amount, of course, would be greatly reduced by the special premiums that are offered by the various Horticultural interests. We know that there is a feeling of impatience on the part of some, but when the gigantic task is considered, and all the necessities that go to making our wonderful exhibition what we always want it to be, the last word in Floriculture, the Committee must move carefully and cautiously.

The expenses of the last exhibition held in Philadelphia, were approximately \$52,000.00. This does not in-

clude the expense of any of the exhibitors, which possibly was double that amount. So that it is safe to say that the amount of money that is involved outside of the value of precious plants, etc., spent, it's about \$150,000.00.

REPORT OF HENRY PENN, CHAIR MAN OF THE PUBLICITY COMMITTEE

In part Mr. Penn's report was as follows:

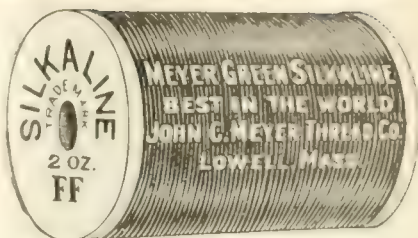

Who of us will deny that one of the most important steps of progress made in the floral world was the influence caused by our Publicity Campaign, and this in view of the small outlay actually expended. It is a tribute to our craft to have had so many who had the spirit of foresight and generosity to link up and put our slogan "Say it with flowers" across, and at such short order as to have already made of it an international by-word.

We have succeeded beyond our own dreams in our national campaign for the small appropriations expended so far, but your committee feels the need of more financial assistance in order to give the impetus to our work for next year, and we hope that some plans will formulate that will make this possible at this time. Everyone acknowledges the importance of this statement, and advertising in order to become efficient must be used frequently, or else the campaign fails. And to do this we should plan to spend at least \$100,000 for next year. The florists are sold on the publicity campaign but we must have a better method of receiving our subscriptions than that which we have pursued the past two years, although we are grateful for the start and the success already made.

Make the convention this year one of the best we ever had, but let the master-hand of Fred Ammann's past effort be one of the salient points of generosity of purpose that might be emulated by others who would like to serve their profession, so that all may benefit by sharing each other's success. And your national publicity campaign is the way to solve your problem for bigger and better business.

Advertising is the spark of electricity that ignites the gas to make the engine go, and with its motion everything else moves. It was this factor that was the weakest part of our business, but thank the stars, we have opened our eyes to its benefits and we are going to keep it up.

Today advertising is synonymous with marketing and many a national advertiser at the recent Advertising Men's Convention held at Indianapolis

Be sure and get Meyer Threads and take no other.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

LEMON OIL COMPANY

Dept. S. 420 W. Lexington St. Baltimore, Md.

and that you are going to keep it moving?

At the evening session, balloting for the next place of meeting showed Washington, D. C., to be the favorite place of the delegates, and the next convention will be held there. The Washington contingent were very active in rooting for the Capitol city and assured the delegates of a warm welcome.

During the evening the President's reception was held at the hotel Hollenden. It was a very enjoyable though entirely informal event. President Miller received many congratulations on the success of his administration.

Wednesday was given over largely to discussions, and to the reports of Henry Penn, chairman of the publicity committee, with an address on Publicity by Major P. F. O'Keefe of Boston. In the evening Max Schling of New York gave an address on the use of flowers in decorations, illustrated by lantern slides. This proved very interesting and profitable.

NEWS NOTES.

At a meeting held at Horticultural Hall, last Saturday, Mr. Theodore A. Havemeyer, of New York, was made a member of the executive committee of the horticultural conference on quarantine 37. Mr. Havemeyer will represent the New York Horticultural Society.

E. M. F. Jessup, who is engaged in the nursery business at Norwalk, Ct., was recently married to Miss Theresa Wilkins.

Mr. A. J. Bothman of Adams, Mass., one of the best known florists in Berkshire County, recently suffered the amputation of his right leg below the knee. The operation was made necessary by a difficulty which has troubled Mr. Bothman for the past year.

of the Advertising Clubs of the world, said that the sooner we called advertising the means of marketing, the sooner we gave it its rightful power, when it will receive its fullest benefits, and we as florists having had only two years of its experiences nationally, have a great deal to be thankful for, particularly in the results already shown.

We have the material and the money but we lack the foresight of going into this publicity campaign in the proper way. We should spend and receive at least three times the amount we have, to show you adequate returns to prove the worth of advertising.

And last, but not least, who among us will not say that since we have begun a national campaign that other lines of big business have had a higher regard for the florist, both as a bigger man, as well as being better known. When it comes to being known, take an unknown concern and one that is well advertised—which of the two will attract you? On the

same idea, who of us after seeing and hearing of the S. A. F. and O. H. and its "Say it with flowers" program, would like to see it discontinued. Hasn't it given you genuine pleasure and pride to know that you are a contributor towards making it a success

The Beardless House At Beardsley Park Bridgeport, Conn.

Know why we call it a "beardless house?" That's a long story—but here are the main points in brief. A prospective customer wanted to see some of our houses. Wanted, also, to see some that were not ours. So we gave him names of both and suggested that uninfluenced by any of us, that he go and make unbiased comparisons.

Which he gladly did. Said he liked the way we were going to stand or fall by the comparison of our houses with others. The last one he went to see was the Beardsley Park house, where we met him.

You have heard a lot of talk about valving or not valving coils. There is no talk in this case. Here are the valves.

His first remark was: "Your houses always look as if they had just had a shave. No rough spots. The workmanship is smooth and clean. Some I have seen looked like they were growing a beard."

So that is why we call the Beardsley Park house, "beardless." To which let us add that our friend bought a Hitchings house. Bought it mind you. We didn't sell it. He sold himself. Or rather our houses sold him on our way of doing things. You know we go anywhere for business.

Or to talk business.

Right down to the very last thing, everything is AS-IT-SHOULD-BE, which means the frames are heated.

Being a park job this attractive little reception or ante room is an essential.

NATIONAL PUBLICITY CAMPAIGN

The Publicity Campaign was a very important topic at the Cleveland Convention of the Society last week. An enthusiastic gathering at the session devoted to it endorsed the work that had been done, and there were many outspoken in their praises of the campaign. Owing to the apathy of a very large majority of the florists of the country, which of late has been very marked, it was a question in the minds of some whether the campaign might not be abandoned. There was, however, a general expression of opinion that any abandonment would be an appalling calamity in view of the tremendous amount of good accomplished for the florists' industry. As a result, the campaign is to be pushed more vigorously than ever.

One feature of the proceedings was the reading of a letter from a large florist concern in England, Bees, Ltd. of Liverpool, enclosing a cheque for \$50.00 as a subscription to the campaign, and containing a request for permission to use the slogan "Say it with Flowers" in connection with a Publicity Campaign about to be started in England. It goes without saying that the permission was granted. The slogan ought in time to have world-wide use.

The fact was deplored that quite a number of florists had not yet met the obligations of their subscription guarantees. This has, no doubt, been due to carelessness. It is hoped that they will now feel the importance of making remittance, and send in their cheques without further delay.

Our committee are pleased to continue their work, but it is up to the florists to give the necessary financial assistance. As has often been said in this column, if every florist would give only five dollars (\$5.00) toward the campaign, it would be fully financed. Several have individually given one hundred times this amount, but that is no reason why ninety-nine other florists in each case should evade a subscription to the fund which is creating so much benefit for them.

At the convention hundreds of incidents were related in proof of the business bringing power of our slogan, and its actual promotion of business. All this was very interesting to these who have thus far subscribed, and especially to those enthusiasts who

have doubled, or trebled their subscription. Now you Mr. Florist, who have not yet subscribed don't you think it is about time we heard from you? You have doubtless, always been proud to pay your own way, and you are assured that in making a subscription to our fund you relieve yourself of any thought that you are benefiting from the generosity of others. You are not really giving anything, you are merely investing a small amount which most surely will bring good returns. This has been proved time and again.

You can also help in another way. Perhaps your establishment furnishes an opportunity for the display of one of our big billboard signs "Say it with Flowers" if so you would help the campaign if you would get one and install it. They are cheap—about cost of material and labor—ornamental, and quite desirable.

Let us hear from you anyway.

JOHN YOUNG, Secy.

43 West 18th Street,
New York City.

PLANNING A MAIL ORDER BUSINESS

The Murphy Manufacturing Co., 275 East avenue, which does a large mail order business in novelties, is making an expansion in its business by taking on a new line in addition to its present output in the form of a floral business. Spacious greenhouses are being erected upon the company's property in which all sorts of flowers and shrubberies, which can be sold by mail, will be grown. The building of the greenhouses is well under way and as soon as completed the new branch of the business will be started.—Norwalk, Conn. Post.

MR. BURR GOES TO EUROPE

C. R. Burr of the Burr Nursery Company recently sailed from New York city for France. He is accompanied by several prominent nursery men all over the country who are going to France to investigate the seedling question. Since the great war this question has been one that has puzzled the American nurserymen. The war has practically put the nursery business in France out of commission. It is for the purpose of looking over the prospect of the business for future trade that these men are going across the water. The party intends to visit Belgium and England before returning in October. —Westchester, Conn. Herald.

NASSAU COUNTY HORTICULTURAL SOCIETY

The monthly meeting of the Nassau County Horticultural Society was held on August 11 in Pembroke Hall, Glen Cove. Thos. Twigg presided and James Michey was elected to active membership and five petitions for active membership were received. Wm. Milstead was first for 12 gladiolus and also for 12 asters. Ed Harris won first for 6 tomatoes. Frank O. Johnson received a cultural certificate for Cyp. Frau Ida Brandt and honorable mention for Cyp. Curtisii.

A letter of sympathy was sent to Mrs. J. Partridge. Mr. Partridge, one of our honorary members, died suddenly last week. A letter was also sent to the brother of the late Wm. Gillis. Mr. Gillis, one of our active members, died after an operation.

The Dahlia Show will be held on September 30 and Oct. 1 in Pembroke Hall.

The exhibits for the September meeting will be one outdoor melon, 12 potatoes, three head of celery.

The annual picnic of the society was held on Thursday, August 12, and can be classed as one of the most successful ever held by the society. The only ones to make a complaint will be the ones who stayed home for they sure missed a good time.

ARTHUR COOK, Cor. Sec.

NEW HYBRID LADY'S SLIPPER

A new hybrid lady's slipper raised in the Garden orchid houses during the last five years has just produced its first flower. This is the first slipper orchid raised at the Garden to reach the flowering stage and will bear the name of "D. S. Brown" in honor of the man who brought the Garden orchid collection up to the present standard. The parents of the hybrid were *Paphiopedilum barbatum* Crossii, a native of the Malay region, and the hybrid *P. Harrisianum* superbum. Both were dark-flowering types, but the color of the offspring is greenish yellow with a prominent white dorsal sepal, the upper portion being flushed with bright purple. The margins twist back with age, resembling *P. villosum*, the parent of *P. Harrisianum*. The general shape of the flower suggests *P. Harrisianum*, with the exception of the broad dorsal portion with its prominent venation, this being plainly indicative of *P. barbatum*.

—Missouri Botanical Garden Bulletin.

The St. Louis Florists' Club elected the following officers: President, W. R. Rowe; Vice-President, William Osseck; Secretary, J. J. Beneke; Treasurer, William C. Smith. Trustee for three years, L. Baumann.

Your Store Window

Do You Know What is the Most Effective Height and Depth?

Have you ever stopped to consider what effect the height or size of your store windows may have on your business? Probably the average florist has never thought of this matter, and yet it is a question which deserves attention. The manager of a very large retail concern in New York has been talking about this question, and has given some views which are well worth the consideration of all retail florists. Among other things he said:

"The effective show window should have a floor about eighteen inches above the sidewalk level and the glass should never be more than eight feet high. Any window space above that height is of no great value for display and is very difficult to trim.

"The eight-foot or less window is far more effectively trimmed and lighted. Windows more than four feet deep require too much merchandise and labor to trim, so that false backs must be used. The window backs should be paneled to the height of the window front and should be painted with a white enamel. The glossy surface adds life to the display and the white never jars with any other color which may be placed near it. Mirror panels also add greatly to the appearance of a window.

"In studying the plans for store fronts I have come to believe that deep set in doorways are all wrong, unless in the case of a very narrow front. The easier we make it for the people to enter the store the more we will get in. Then there is less chance of conversation parties blocking up the passageway.

"We have several instances where

there are two entrances with an island show window in the front, a passage all around back of it and then another window placed between the two entrance doorways. The island window is nothing more than a glass box which must be trimmed to display all four ways, and very little can be done in the upper part without interfering with the lighting or with the daylight getting through to the rear show window. As it is, this rear window must be artificially lighted most of the time. The passageway is a great parking place for baby carriages, with no half-hour limits, and they block all passing and kill the window displays.

"Island" Windows Unprofitable

"I have checked up two such places and have found that 10 per cent of the people who came into this passageway went into the store, and there was a still smaller percentage of people who did go into the store who never noticed the passage at all. Our windows are not supposed to contain samples of everything we have to sell, and a store big enough for two double entrances will always have sufficient show space for the necessary displays. So I am convinced that this style of front, though often very snappy looking, is not worth to us the extra cost of the construction, of the extra floor space taken, or the extra cost of lighting.

"I believe that when we have a large store front and want more window space, then the set-in front can be used, but cutting out the island show window altogether, leaving the front clear and wide open. Such a

space is inviting, rich looking and gives far greater value to the side window displays, and gives the middle window a chance. Such an entrance with white tile floor, white enameled ceiling, and with snappy, well-lighted show windows on three sides, is far superior to any other design. Should we require a basement entrance in the center, same should be surrounded simply by brass handrail.

"The ceilings of show windows and vestibules should always be painted white to aid the lighting scheme. Only in cases of very high entrance ways or where there are great quantities of insects should these exterior ceilings be painted red."

THE MARKET

There is practically no market. To be sure, there are flowers enough such as they are, but buyers are few and far between. There is a tremendous glut of gladioli, which can be bought at almost any price down to one cent each. Asters are plentiful and also selling low. There is a fair demand for helichrysum and even goldenrod is noted in the Boston market.

The Canadian Horticultural Society has elected the following officers: President, W. E. Groves, Hamilton; First Vice-President, C. J. Hay, Brockville; Second Vice-President, Fred T. Clark, Toronto; Secretary-Treasurer, H. J. Eddy, Montreal. The association at its twenty-third annual convention voted to change the name to Canadian Florists' and Gardeners' Association.

At the annual meeting of the ladies of the S. A. F. at Cleveland last week, Mrs. George Asmus, of Chicago, was unanimously elected President. Mrs. Martha Guenterberg, of Chicago, was elected Vice-President; Mrs. A. M. Herr, Secretary and Miss J. D. Fulmer, Treasurer.

THE TALK OF THE TRADE

It is interesting to watch the gladiolus growers in their efforts to produce absolutely pure white varieties. Several of the varieties called white are, strictly speaking, not white at all, but cream, while others have a considerable infusion of some color. There was nothing at the recent show in Boston to equal Europa, as a white glad. I think that most all growers will admit the truth of that statement. It makes a difference, though, for what purpose the flower is wanted. Take Lily White, which was shown by Pres. Meader, of the American Association, as an example. In spite of its name, this flower lacks the snow white character of Europa, but it is a remarkably good florists' flower, much better than

Europa ever will be from that viewpoint. The individual flowers are not very large, and they are set closely on the stem. They are not deep enough to crush readily. They stand up remarkably well and can be used readily for decorative work. As a florists' flower, therefore, Lily White is exceptionally good, but it is always necessary to make a distinction between what is purely a florists flower and what is a show or exhibition type.

If I am not mistaken, there is likely to be a little confusion over the gladiolus known as White America. It will be remembered that Mr. Childs has been putting out a variety under this name, but recently I was shown another and quite different White

America, which I was told had been brought over from Holland. In the work which is being done to prevent duplication of names, I am afraid the committees will have some difficulty in avoiding such duplication where the same name is given to different varieties in two different countries.

It seems to me that the L. Bomb Floral Co., of Detroit is serving both its customers and its own interests with the little card which it sends out. The sentence "Flowers are Alive" immediately catches the eye and leads the reader to follow down the card with the result that the name of the concern is impressed upon the memory. Perhaps other florists will like to adopt a similar plan and I am sure that Mr. Pochelon will not object if

A Field of Well Grown Asters

I reproduce the message:

Flowers Are Alive

If you treat them well they will respond and bloom forth in all their beauty.

If You Abuse Them

or are careless with them, they will quickly fade and die.

We try to send you blooms that will last and be a pleasure to you.

For your own pleasure, will you just notice these blooms and see that they are in a receptacle that holds a generous supply of fresh, cold, life-giving water.

If They Wilt

cut a piece off the stem, put them deep in fresh water, and if possible, place them in a cool dark place for a few hours.

Flowers will wilt in a draught, or without sufficient pure cool water. Some flowers, if bruised, will drop their petals, but with a little care and hardly any attention they will well repay you.

We Work a Year

day and night to produce the flowers—will you spend a few moments and a little care that they may continue their beauty for your pleasure?

Over night, keep them in a cool place free from draught and deep in water.

"SAY IT WITH FLOWERS"

"TRY BEMB FLORAL SERVICE"

Godfrey callas proved to be a good crop for many a florist last winter, and this coming season will probably be no exception. Now is a good time to get your plants started if you have not enough stock of your own; three and one-half and four-inch plants of this calla pushed right along from this time on into the fall will give surprisingly good results. Many who have not had the experience think that large dormant bulbs are necessary for flowering the following winter, but this is not true. James Wheeler says, "Keep a Godfrey calla growing and it will flower for you," and while the flowers from small bulbs will not compare in size to the old-fashioned calla, there are many uses for them, and in fact, many of us like the smaller flowers

better than those big, overgrown monsters that are hard to use in many cases.

The paper white situation has come down to the point where it is a question of getting the stock rather than a question of price. Those who bought early were fortunate. The crop is very short and growers who haven't bought will find that if they are successful in getting any stock from now on, they will have to pay a pretty good price.

Many florists don't seem to realize that bulbs of Spanish Iris are one of the items shut out by Quarantine 37. There are numerous inquiries, but apparently no way of furnishing a supply. I understand, however, that at least one enterprising bulb house has made arrangements with a grower in California to grow on a quantity of Spanish Iris from small stock which came in before the quarantine went into effect. This stock will probably be available in two years; it is doubtful if it will be ready for next year. Let us hope that it will turn out well and there seems to be no reason to believe that it will not be of good quality and useful to the trade.

C. U. LIGGIT

Wholesale Plantsman

Bulletin Building

PHILADELPHIA

I have mentioned it before, but it will stand repeating; stock of vinca is again scarce, as it has been for several years back. There is a persistent call for all sizes ranging from 2 1/4-inch pots through to field-grown plants. Anyone having any surplus to offer will do well to bring it before the trade as it will be quickly taken up and at fair prices. This is a crop which can be made to turn in a good profit and this point should be taken advantage of by growers who have the room to spare.

Field-grown carnations around New England certainly are running below the average. There are a few exceptions where the stock runs strong and even, but generally speaking, not only in Massachusetts, but through the Northern states of New England the stock is only of medium size and of rather poor quality. Plants did not do well in the field and there is quite a lot of late planting. Matchless and Ward are showing up better than most of the varieties. Enchantress types while below what they should be have done better than Pink Delight, Benora and the scarlet and crimsons shades. Possibly we may not see such a quantity of early flowers in the markets as was expected, and I believe that carnation growers will do well to hold their

plants back until they are well built up, as a good crop after November 15, will give much better returns than by turning them loose for early flowers and sacrificing the plants.

The market in general through the East for some time past has been very low, not only during the month of August, but quite a good part of July was below what we had a right to expect. I do feel, however, that the florists throughout the state of Maine are very well pleased with July. Trade seemed to keep up very nicely with them, not only in the general run of retail work, but funeral work also. Outdoor stock did very well, and while sweet peas at this writing are in very bad shape on account of a lot of damp weather, the stock was fine up to August 1. An unusually fine lot of asters are to be seen, and I was particularly impressed with the large amount of garden flowers raised besides sweet peas and asters.

Burr's Greenhouses at Freeport, Me., are preparing for a big business the coming season. Pot plants are in good condition and carnations, while they are just being housed, seem to average a little above the general run of stock. I also noticed an exceptionally fine lot of cold storage lilies coming along at this place, and Mr. Burr shows plainly that he is successful with this crop. While the plant of carnations at Minott's in South Portland, Me., was a little later than they like, the stock that is going in is very good. Mr. Minott is particularly fortunate in having such fine stock of Pink Delight, and expresses himself as very much in favor with Mr. Strout's White Delight. Everyone who has had a chance to observe the latter variety says that it is a strong grower and better producer than the parent plant, and everything that I have seen goes to show that this is true.

MORE BEAUTY IN OUR SHOWS

To go from the hall where red, crimson, pink, yellow and purple gladiolus were exhibited in Horticultural Hall to the upper room where the orchids were shown, each placed by itself on the gray trunk of a tree, was like passing from some busy thoroughfare into the atmosphere of a beautiful cathedral where one was rested and refreshed.

Mr. Burrage had the trees cut at just the right height to best show the flowers. Then the pots were painted gray to harmonize with the trees. It was all quiet, beautiful, restful.

In the thoroughfare where the gladioli, each beautiful in itself, were shown, one felt the gay atmosphere of the Midway Plaisance in the old White City of the Fair at Chicago. One met one's friends and caught the gay word of greeting. Friends meet at Horticultural Hall, the gardeners are our friends, growing for us the beautiful flowers and we miss a pleasure if we are not theirs.

One of the prettiest pictures I saw in connection with this show was of two little Negro children three or four years of age carrying two white blooms of gladiolus away from the hall. The glee in the children's faces, the tall white flowers held by the little crisply dressed black children was beautiful to see. I wished that I were an artist to paint that picture of the show.

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

It was inevitable that the name of the Canadian Horticultural Society should be changed. For some time it has been apparent that there was a strong feeling throughout the membership that the old name did not properly represent the purposes and objects of the organization. Especially during the past year there has been much discussion in regard to the proposed change, and while some of the leading florists recorded themselves in opposition, the majority were free to express themselves as approving a name which would actually include the word "florists." It is not surprising, therefore, that at the recent convention the unanimous report of the committee appointed to consider the matter should be accepted with spontaneity. From now on, therefore, the organization will be known as the Canadian Florists' and Gardeners' Association. It is an expressive name, telling exactly what the Association is expected to represent. We believe that the change is a good one, and that the organization will make more rapid growth now that this matter has been settled.

Of course, Boston and all New England feel happy at the selection of Thomas Roland, of Nahant, Mass., for president of the S. A. F. and O. H. There is a feeling of natural pride in having a representative of one's own section at the head of this great organization. At the same time we are sure that the membership throughout the entire country feels that no better selection could have been made by the convention. President Roland's well earned reputation is not confined by any means to the East. He is known wherever florists are to be found, and everywhere commands the highest respect and esteem. While Mr. Roland is not the kind of man to be described as "hail fellow, well met," he is nevertheless a very companionable and likable man,

especially in the company of his closest friends. He has made a distinct success of his business, growing to perfection certain flowers which are by no means easy to handle. He is a ready speaker, remarkably self possessed, always able to meet any situation which may arise, and never failing to be fair and impartial in his decisions when occupying an executive post. We feel sure that he will carry the S. A. F. through a successful year and justify the confidence which has been placed in him.

President Roland will have the assistance of a very capable list of officers. Mr. Gude, vice-president, holds a high rank among florists, and will make a splendid host when the society goes to Washington next year. No one could doubt the popularity of Secretary John Young who was present when he was nominated by George Asmus and heard the tumult of cheering which followed. Mr. Hess has made a very capable treasurer, and no one could see any reason for making a change in that office.

It is evident that growers in all lines feel the necessity of a more rigid standard in the matter of nomenclature, and favor whatever action is necessary to bring about a proper revision and to prevent the duplication of names. It is true that not a few difficulties are certain to be met with as was stated by Professor A. C. Beal in his report before the American Gladiolus Society in Boston. Probably it will take a long time to overcome all of these difficulties, but the hearty cooperation of the growers in all branches of horticulture will mean much towards bringing about the desired result.

At the report of the Nomenclature Committee before the convention of the S. A. F. some important points were brought out. Many members learned for the first time of the work of the joint committee which represents the American Association of Nurserymen and Ornamental Growers' Association, the American Society of Landscape Architects, the American Pharmaceutical Association, the American Association of Park Superintendents, the American Seed Trade Association, the Society of American Florists and Ornamental Horticulturists, and the American Pomological Society. In the report read at the convention, an interesting recommendation from Harlan P. Kelsey, of Salem, secretary of the Joint committee, was read. This recommendation calls for the establishment at once of a National Plant Registration Bureau, which should pass on all new plant names, and whose decision should be final. This bureau should be equipped to identify any plant material submitted to it, and to register new names. Revision of "Official Catalogues of Standard Plant Names" should be made at stated periods, perhaps five or ten years apart, when necessary changes and additions should be made. New editions should be planned as may become necessary, in which additions but not changes may be made. The United States should establish suitable and adequate botanic gardens for growing specimens of plant materials with their standardized plant names attached.

We know that Mr. Kelsey has given much time to a study of this matter, and no doubt his recommendations will be given careful consideration. Certainly this whole question is coming to the front more insistently than ever before. This is true, not only in this country, but also abroad, and it is safe to say that with so many members considering the question some sort of suitable solution will be duly evolved.

"SAY IT WITH FLOWERS"

If he is "an ungrateful pup," say it with dogfennel.

If she is a sour old girl, say it with catnip.

If he is in the poultry business, say it with old hens and chickens.

If he deals in seafood, say it with oyster plants.

If he deals in watches, say it with 4 o'clocks.

If she is a sensitive soul, say it with touch-me-nots.

If he is a spiritualist, say it with live forever.

If she is going to be married soon, say it with a bridal wreath.

If she got engaged in a fog at the seashore, say it with love-in-a-mist.

If she is a flirt, say it with sprays of the butterfly bush.

If she is divided in her affection, say it with love-entangled.

If they are the parents of a new infant, say it with baby-breath.

If he is bilious, say it with liver-wurst.

If he is tubercular, say it with "love-heal-you."

If she is inclined to be a tyrannical wife to a Hollander, say it with dutchman's breeches.

If he is a Hollander who smokes constantly, say it with dutchman's pipes.

If she is extravagant with footwear, say it with slippers.

If he is going into the sheep business, say it with phlox.

If he's a nut, say it with daffodils.

—Retail Public Ledger.

SNAPDRAGON RUST

Snapdragon rust (*Puccinia antirrhini*) is apparently an American disease having been first found in California in 1895. Since that time it has spread all over the United States by means of infected snapdragon plants shipped from place to place.

In the past, spraying with Bordeaux mixture or ammoniacal copper carbonate has been recommended to hold the disease in check, but experimental work done by Prof. George L. Peltier of the Illinois Agricultural Experiment Station and reported in Bulletin No. 221 of that station proves that the benefits derived from spraying are not sufficient to justify the expense.

The disease attacks all portions of the plants, leaves, branches, stems and even the seed pods, and that all varieties are equally susceptible.

To prevent its spreading among plants already in the greenhouse do not syringe the plants. The spores are carried from plant to plant in this manner, and also it creates conditions favorable to the germination of spores.

128 Chambers St., N. Y. City

When watering be very careful not to wet the foliage, simply water the earth.

The disease is not carried over on the seed. This affords a method of avoiding trouble. Remove the soil from the greenhouse benches that has grown infected plants, replacing it with soil which has not grown snapdragons for one year or longer. In growing the seedlings be very careful to avoid the use of infected soil. By this manner only can trouble be avoided.

Having produced seedling stock the desirable varieties can be selected and propagated by cuttings. Be very careful not to use infected cuttings because even a very few cuttings in a cutting bench can cause the loss of the entire bench full of cuttings, the grower laying the trouble to "damping off."

Flowers Under Glass

You should get your Giganteum lilies potted up as soon as possible. Give them a rich compost and use either six or seven inch pots. After they have been potted, the best place for them is a cold frame, with the pots covered six inches deep with soil. If a period of heavy weather comes on, cover the frames so that the bulbs will not get too much water. By the middle of December they should have made roots enough so that they can be brought in and placed on a bench, with a night temperature of about 50 degrees. The bulbs can be potted any time during October, and will come through all right, but the earlier they get in the pots the better. In any event, make up your compost right away and get it under cover.

It's important to look over the carnation beds every day and give water whenever there is any sign of dryness. Have plenty of ventilation even at night. It will soon be time to think of supports for the carnations and oftentimes there is a little lull at this season, which gives you a chance to get some of them set up.

Do not allow the Miltonias to become dry during their growing season. For that matter, they should not remain dry for any length of time, even when at rest. They need syringing regularly, because Miltonias are often preyed upon by thrip, and there is no better way to get rid of these pests. The best way to grow Miltonia flavescent and spectabilis is in baskets or pans suspended from the roof. Have a constant circulation of top and bottom air, if possible. A winter temperature of 55 to 60 degrees seems to suit these plants, and there is no reason why they shouldn't be more widely known, being exceedingly valuable for decorative purposes. Miltonia candida and cuneata do well in pots or pans, if the drainage is good. Give them a compost of rough chopped sphagnum moss and fibrous peat. Several pieces of broken charcoal mixed with the compost will be of benefit. Give enough water so that the roots will keep moist.

When tying up the roses, see that the plants are not bunched too much. This is an important matter at this season, for too close tying will make

the plants lose many of their leaves. It is a good plan when stringing the wires to have the knots free and loose so that the plants will not be choked as the shoots increase in size. The proper way to handle roses is to tie each shoot separately down between the first and second eye. This will be a great help while cutting later on, and will result in having fewer roses cut in the wrong way. Moreover, the cutting can be done in quick time, the strings serving as a guide. Be sure that the stakes are tight so that they will not slide when the plants are syringed later on in the season. Use white cord for this purpose, and have the knots well tied so that the stakes will not move. See that the stakes are put in on the same side of the plants so that they will be in rows. This at least adds much to the appearance of the house.

It is about time to mulch the Beauties which were planted early so that the roots will be protected from the rays of the hot sun. Give the plants plenty of plant food so that the soil will be rich all the time the plants are growing. The best time to apply manure is when the plants are starting for another crop and with the new growth about half grown. True some growers claim that mulching protects the plants for a week or more, but other good rose growers say that they have never seen any such result when the work has been done properly. Of course the manure must be well decayed, and it should have been turned over for at least once a week for several weeks before it is put onto the benches. Clean up the plants well before putting on the dressing, making a point to pick off all the broken and dead leaves, as well as the leaves on the bottom that might touch the manure. After that give a good top dressing of bone meal and work it generously into the soil. It should be practically rubbed in, and steel scratchers should be strictly tabooed, for with them there is much danger of destroying many roots. Don't put on too much manure at one time and give a good watering as soon as it has been applied. The water will remove any heat that may remain, while at the same time it will wash much of the ammonia into the soil, making it available to the roots. This matter of watering right after mulching is important, for otherwise the plants may be burned.

"You in your small corner and me in mine."

Charles Henry Fox has never been much of an S. A. F. man, he says, and he did not attend the convention. But he is a strong adherent of the F. T. D., and means to attend their general meeting without fail. The F. T. D. appeals to many, just as it does to Mr. Fox. It is well to remember, however, that the S. A. F. some thirty-five years ago, started in to pave the way for all these later developments, and she is still a hale and hearty matron lady, and deserves affection from her many children.

Charles Sim writes from Kelso, July 29, where he is staying with his brother for a month after making a tour of the North of Scotland by way of Forfar, Aberdeen, Inverness and back by way of Perth. He is well and enjoying his vacation. He will return on the White Star Line, sailing from Liverpool in September.

Words of wisdom. What good are they if people give no heed? For years uncounted have we listened to the sage advice:—never bring in your crop at a time it is not wanted. And yet—here it is mid-August and we see oceans of asters and gladioli and countless other things being thrown into the market, while there isn't a single buyer for a thousandth part of it! Time wasted, labor wasted, money wasted. Instead of covering yourself with mud and whiskers and a wringing shirt—why not go fishing?

We cannot say much for the man who stays at home, while all these wonderful things are happening out at Cleveland, "say Jim that gives me an idea." "I've got a hunch—there's millions in it!" We can hear the boys talk, out there, just that way, and they are right too. There is nothing like getting together for developing new ideas. So the old fossils, like myself, who stays at home are back numbers

We regret to have to disagree with our boss the managing editor of "Horticulture." His weekly sayings are so wise and forceful and to the point that we had about come to believe him infallible. But when he argues that

August is not the best month to have a Florist Convention we beg to differ. That's the time they all have plenty of time, and that's the time to get together! The old sages who founded the S. A. F. knew what they were doing, and they hit the psychological moment. J. C. Vaughan and John Thorpe and Robert Craig and all the

rest of these old timers knew what they were doing. Peter Henderson and Edwin Lonsdale and William J. Stewart and all the other progressives of that day, came a running, and the society was a success from the start. Don't get the thing mixed up with exhibitions. That's another story altogether.

Michell's Recleaned Grass Seeds

For Putting Greens, Fairways, Bunkers and Teeing Grounds, and in fact for every purpose, are immediately recognized by authorities to be of a superior quality.

Many varieties of grass seeds are short in supply—better cover your wants now.

August, September and early October are the right times to sow grass seeds.

Write for illustrated large catalog and list of satisfied golf club clients.

MICHELL'S SEED HOUSE 518 MARKET STREET
PHILADELPHIA

WHEN TO SOW GRASS SEED TO INSURE A GOOD TURF

Beyond a doubt, as has been proven, late in August, all of September, and up to the middle of October, is the best time to sow grass seed in the latitude of Philadelphia, for all purposes, particularly for lawns, putting greens and fairways.

It used to be that the spring months were considered the best time to sow grass seed; but the seed sown in the fall has given better results.

Probably the chief good reason, if there are no others, for late summer and early autumn sowing, are the facts that the nights are cooler and there is a certain amount of natural moisture furnished by heavy dews if there are no rains. Furthermore, the growth of weeds and other undesirable plants is practically over at that season, which is an important factor in the elimination of a poor sod. Again, the spring months are busy times for all other kinds of work, and it is not always possible to devote the care of preparing the ground for sowing seed for a permanent sod, which is available later on.

Most of the Landscape Gardeners are using the above time for making a

new lawn. It is frequently thought that the approaching winter has a serious effect upon the young grass, but as a matter of fact, this is not generally so, the more snow we have, the better, as it seems to feed the roots.

Grass established in the late autumn or early autumn will make rapid growth early the following spring, long before you could think of getting the seed sown and the ground in a workable condition. The time as advised above will gradually replace all others for sowing season.

J. F. BRADLEY.

NEW ENGLAND NEWS NOTES

A recent attempt was made to burglarize Conant's Florist Shop on Essex St., Salem, but proved unsuccessful. This is the second attempt of the kind.

Mr. A. W. Higgins, a well known florist of Westview, Mass., recently lost a barn from fire, the barn being struck by lightning.

Edward S. Haskell of Fairhaven, Mass., long a leading florist in that section, died recently at the age of 63. He was prominent in politics as well as in florist trade.

Wm. Dillingham, aged 70, is dead at

his home in Randolph, Mass. Mr. Dillingham was a well known florist supplying many of the stores in Brockton and other places.

The horticultural building at the Rhode Island State College was recently destroyed by fire.

Mrs. Sarah Joyce, prominent in the florist trade, is dead at Pottsville, Pa. Mrs. Joyce was born in Ireland in 1839, and was known as the oldest business woman in the vicinity of Pottsville, where she had been engaged in the florist business for almost 60 years. She was the mother of fourteen children.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am told by one of the ladies who has been making the rounds of the most famous gardens in the vicinity of Boston, through an arrangement with the American Civic Federation, considers the Larz Anderson garden, in Brookline, the finest of all which she saw, with the Brandegee garden at Faulkner Farm, also in Brookline, next. Of course this is only one woman's opinion, and other visitors may have thought differently, because tastes do not run alike in these matters, any more than they do in any others. As one thinks over the gardens around Boston, one is surprised at the wide diversity in character and interest

which they show. Also it seems difficult to understand how anyone can make the sweeping statement, as I understand some of the women who returned to Chicago after the North Shore Convention did make, that the Chicago gardens are more attractive than those of New England. Truth to tell, it is very difficult to make such comparisons. Probably the purely formal garden is more in evidence in the Middle West than it is in New England, where even the so-called formal gardens often have a suggestion of informality quite commonly associated with the New England States.

In the Greater Boston district there certainly is little comparison to be made between such gardens as that on the Anderson estate, where Italian features prevail to a large extent, and which is impressive largely on this account, and say the Hunnewell Garden at Wellesley, with its topiary effects, or the Crane Garden at Ipswich. Of course, the Wellesley estate is famous the country over, but more especially for its trees and its shrubs than for its perennials. Indeed, the pinetum here is one of the most noted of those to be found on any private estate.

The most delightful feature of the Crane place is the rose gardens. The setting is admirable, there being an enclosure which gives a most delightful feeling of privacy and intimacy to the garden. The roses are in great variety and carefully kept. They thrive far better, too, than one might

perhaps expect in such an exposed situation as that of the Crane estate, located as it is close beside the open sea of the North Shore. Of course, however, the protection which has been given the garden by the surrounding planting accounts largely for the satisfactory way in which the roses winter. The formal garden on this place is also most delightful, the water effects being especially attractive. When it comes to the planting of trees and shrubs such as are needed to make the place really complete, much yet remains to be done, and probably Robert Cameron, the present superintendent, and one of the best known gardeners in New England, has plans made along this line. He is certainly to be congratulated at the success which he has had in restoring the lawns which occupy several acres and had become badly browned. Because of the infinite possibilities of this estate, its increased development is being watched with keen interest by gardeners and other estate owners; and the fact that its owner is a Chicago resident adds to its interest for western people.

Quite different is the Bayard Thayer place at Lancaster. Possibly this estate would not make so prompt an appeal to the mere amateur, but those who are familiar with trees and shrubs, and especially those of the rarer kinds, find endless delight in wandering over this estate, and of course, all flower lovers, even though they may have no Scot blood, are delighted at the great patches of heather which appear here and there. Perhaps there is no private estate in the country where the heather has apparently

been made to feel so thoroughly at home as here.

Another exceedingly interesting feature of the planting is the hedge of Japanese Yew. Of course, this Yew is rather expensive at the present time, but its value for hedge purpose can hardly be over-estimated. It grows well, and its light, feathery appearance is most charming.

At one end of the sunken garden here, the visitor also finds an almost unrivaled specimen of *Euonymus radicans* and the various varieties. It was the growth of this garden which demonstrated to some of the leading horticultural authorities of New England that the so-called *Euonymus vegetus* is really a form of *Euonymus radicans*, that is, the form which the latter plant takes when it reaches the fruiting age. On a single plant here may be found the typical leaves of *Euonymus radicans*, *Euonymus radicans vegeta*, *Euonymus radicans variegata*, and *Euonymus radicans Carrierei*.

A few weeks ago I made the statement that the herbarium at the New York Botanical Garden was the largest in the country because of the combination of the Garden's Herbarium and the Torrey Herbarium. I find now that there is some question as to whether this is a true statement of fact, if the three herbariums of the Harvard University are considered as one. The Gray Herbarium, the Arnold Arboretum Herbarium, and the Herbarium of Cryptogrammic plants at the Harvard College Museum are all under the general jurisdiction of the Uni-

versity. Together they make a herbarium which is probably unsurpassed by any. The Gray Herbarium at the Harvard Botanical Garden is one of the most famous in the world, and one of the best kept. In fact, under the care of Dr. Robinson, the curator, who has been responsible for the reconstruction of the building which houses the collection, it has become generally recognized as a model. While the herbarium at the Arnold Arboretum is much newer, it undoubtedly is the most complete of any herbarium devoted wholly to woody plants. According to Prof. Sargent, the director, it likewise contains the best collection of conifers to be found in the world. In a comparatively few years it has achieved a wide reputation, and without doubt its value will be enhanced by the material which Mr. E. H. Wilson will send back as a result of his trip to Australia, India and other countries of the southern hemisphere.

THE GROWERS' CONVENTION

W. J. Keimel of Chicago Elected President at Largely Attended Meeting

The Growers' Association was made a permanent fact at a meeting held in Cleveland last week during the S. A. F. convention. This meeting was very largely attended and the whole question was thoroughly threshed out. There was some opposition to the formation of such an organization, but all objections were swept aside when Thomas Roland of Nahant made a rousing speech in favor of going on with the work.

The election of officers resulted as follows: President, W. J. Keimel, Chicago; vice-president, E. Allan Peirce, Waltham, Mass.; secretary, Fred Ammann, Edwardsville, Ill.; treasurer, Wallace R. Pierson, Cromwell, Ct. The constitution and by-laws were accepted, subject to changes to be made by the directors and reported upon at the next meeting of the Carnation Society at Washington.

There is every reason to believe that the new organization will be a great success and do much for the growers of the country.

IBOLIUM PRIVET

It is Proving Popular with Nurserymen and Private Growers Alike

When one considers the extended range over which Ibolium Privet will thrive as compared with California Privet, it is not to be wondered at that a very active interest in it is already asserting itself, and no doubt as soon as sufficient stock for propagating purposes can be disseminated its propagation will be taken up on an immense scale. The practical propagator will be interested to know that Ibolium Privet can be propagated with the same facility that has made the producing of California Privet so easy and inexpensive. It comes with equal freedom from either hard or soft-wood cuttings.

Another important characteristic of Ibolium Privet of value to the nursery-

No. 1

man is its can't-be-killed character, standing without seeming complaint all the hardships and exposures the most careless of nurserymen imposed upon nursery stock. There is seemingly no season of the year when it cannot be dug up and transplanted, even during its most active season of growth, in fact, as an all-round plant, it is sure to be the nurseryman's favorite and "best seller."

The experiment stations of the United States and Canada have plants of Ibolium Privet growing in their experiment grounds, and will be able to give information as to its character which will be of great local value. To those who wish to get up a stock right away for propagating purposes, the originators make the statement that

No. 2

it is unquestionably hardy wherever Ibolium Privet will thrive.

The accompanying illustrations indicate the lusty character of the plant and its excellent appearance at all times.

No. 1 illustrates a plant photographed as the new growth was just emerging this past spring, and shows how free from winter injury it stood the severe winter of 1919-20, practically every bud including the terminals coming into growth without the slightest injury whatsoever under winter conditions which played havoc with California Privet in this section, in many cases killing it quite to the ground.

A report recently reached us from the Arnold Arboretum stating that Ibolium Privet lived through the past winter without injury. In other words, there is no doubt that this new

California Privet and is a feature in Ibolium Privet's favor.

Photograph No. 3 shows a typical Ibolium Privet coming two years old, dug from nursery row July 15.

The mature foliage of Ibolium Privet resembles the California Privet to a marked degree, being perhaps in comparison with it a little less glossy and of a somewhat lighter shade of green. Under the pruning knife it quickly conforms to any required shape thickening up rapidly owing to its disposition to throw out lateral growths freely.

Ibolium Privet matures its foliage a little earlier than California Privet, in the late fall, taking on before maturity the richest bronze hues.

Ibolium Privet when left untrimmed develops into a graceful shrub, which flowers so profusely as to give it a place among the best flowering shrubs, see photo No. 4, followed with clusters of fruits which remain on to adorn the plant well into the winter.

ECHOES OF THE CONVENTION

Everybody agreed that at the close of the convention in Cleveland last week that it was the most businesslike gathering of the kind ever held. The members attended the meetings faithfully, paid close attention, and for the most part cut out mere pleasure seeking, although many of them visited the greenhouses around Cleveland through the courtesy of local growers.

The election of Thomas Roland of Nahant as president was received with great enthusiasm. At first Mr. Roland was a little reluctant to take the honor, but could not well withstand the pressure brought to bear upon him. The directors elected were Carl Hagenburger and Thomas Joy.

Perhaps the only disagreeable feature about the convention was the acoustics of the hall. Most of the speakers had great difficulty in making their voices heard. Major P. F. O'Keefe of Boston was an exception, in fact, Mr. O'Keefe may be put down when he spoke and everybody listened with the closest attention.

BOSTON MEN AT THE CONVENTION

Greater Boston was well represented at the S. A. F. convention in Cleveland last week. Among those present were Thomas Roland, S. J. Goddard, E. Allen Peirce, Geo. Elliott, W. D. Howard and Wife, John O'Brien, Major P. F. O'Keefe, J. J. Slattery of Galvin's, Edward Welch, and Mr. and Mrs. B. Hammond Tracy. Some of the Boston representatives came home as soon as the convention was over, while others lingered along the way. Mr. Elliott took advantage of the opportunity to visit friends in Chicago. Of course, all the Boston people were enthusiastic over the election of Mr. Roland as president.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopaedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 216 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely Illustrated. 400 pages. 5½ x 8 inches.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

LAGER & HURRELL, Summit, N. J.

S. A. F. & O. H. Department

The publishers of "The Delineator," "Everybody's Magazine," and "The Designer" in a recent advertisement published broadly in the newspapers to carry home their declaration, "Whatever the idea be, to eat more citrus fruit; to line our chimneys with clay, or to use granite for monuments, that idea may be 'sold' to an entire nation by national advertising," featured our Publicity Campaign, calling particular attention to the great service of the F. T. D., and also to our slogan, remarking of the latter, "With the aid of the florist even the mute may be silver-tongued, for, whatever the occasion, we are being taught by advertising that we 'Say it with Flowers.' The florists must 'sell' an idea to the nation."

The trade should highly appreciate this making an example of our campaign, this reference to the purpose of our effort to extend the use of flowers. We have "sold" the idea to the nation, and it is up to the trade to see that the idea remains sold. This would appear to be an easy task. All that is wanted is the support of those who have been hesitating to make a subscription until they might see that they could not lose anything. All uncertainty as to the benefit to accrue from the campaign is dispelled. Our main object has been attained. The slogan "Say it with Flowers" has gone home. The Shotwell Floral Co., Fargo, N. D., sent us a letter they recently received from a customer, which reads as follows: "It might be of interest to you to know that through the kind offices of the little motto 'Say it with Flowers,' and, perhaps, who can tell, by virtue of several dozen dark red roses furnished by the Shotwell Floral Co., Miss T—— is now Mrs. Roy B. F—— and we live at ———." No need to publish the names, although the writer of the letter in his happiness probably would not object. Goodness only knows how many others the slogan has helped through its suggestive force.

Its up to the florists to keep the slogan working all the time. If you have not contributed what you think should be your just portion of the expense, why not attend to this important matter at once? Help to keep the idea "sold," it is to your interest to do so.

CARNATION STEM ROT

From the data and experimental evidence at the Illinois Experiment Station it seems clear that the control of stem rot (*Rhizoctonia Solani*) of carnations lies along the line of careful control of growing conditions of the carnation plant and in the use of a clean soil. The disease is a soil disease. The organism lives in the soil, under ordinary conditions, as a saprophyte, but under more favorable conditions attacking the carnation plant and causing its destruction. The conditions influencing its spread and development are high soil temperature and soil moisture.

Soil Disinfectants of Little Value

The results of these experiments indicate that the usual soil disinfectants, such as sulphuric acid, lime, Bordeaux, copper sulphate and formalin, applied to the soil have but little effect on the fungus and that they are consequently of little value as a means of controlling the disease. No chemical solution was found which, when applied to the soil in quantities not harmful to the plant, eradicated the fungus. The fungus is very resistant in soil to weak solutions of acids and alkalies. It is also resistant to low temperatures and drying. Evidence is presented that it lives in soils for years, resisting all the rigorous conditions of a cold winter and a hot summer.

Steam Sterilization Effective

In order completely to eradicate the fungus from the soil, steam sterilization alone seems to be effective. Dry steam forced through the soil at forty pounds pressure for one hour will destroy the fungus. There is no indication that such sterilization of soil is accompanied by evil effects on the growth or the production of carnation plants. Sterilized soil grows equally good carnation plants as unsterilized soil. However, aside from the labor and expense involved in sterilization, unless the plants brought in from the field are free from the disease organism the disease may again be introduced into the soil of the benches. There is, of course, but little assurance that the fungus is not present in the field. In order to prevent the introduction of the disease from the field into the benches, only healthy and uninjured plants should

be used. Every plant should be carefully examined at the crown for evidences of the disease and any plant showing symptoms should be discarded.

Temperature and Moisture

The first month the plant is in the bench is the most critical point in the life of the plant, especially if the transplanting is done early. The temperature of the greenhouse is high at this time, and still more important, owing to the large amount and the frequent use of water concomitant with transplanting, the humidity of both soil and air is high. Experiments have shown that high temperature and high water content of soil, especially when existing simultaneously, offer a most favorable environment to the fungus. High temperatures in the cutting bench and in the carnation house give *Rhizoctonia* a two-fold advantage; they lower the vitality of the cuttings and plants and give the fungus optimum conditions under which to develop. In other words, when normal temperature for the best development of the plant is furnished, no stem rot occurs; while if high temperatures are maintained, the vitality of the plant is lowered, thus making it more susceptible to stem rot. At the same time, high temperatures favor the growth of the fungus, increasing its virulence. A

careful watch, therefore, of the growing conditions of the plants is necessary at this time. The temperature should be kept as low as possible and no more water applied to the soil than is absolutely necessary for a healthy growth of the plant.

These statements apply also to the growing of seedlings and cuttings. Steam sterilization of soil and sand is recommended whenever it is possible. The cutting bench offers a most favorable environment for the growth of the fungus if it is present in the sand. A relatively high temperature and high percentage of moisture of the sand, as well as the high humidity of the air resulting from artificial shading, are characteristic of the cutting bench. Under such conditions it is extremely difficult to control damping-off if it is present in the sand. It is therefore recommended that the sand be sterilized with steam and careful attention given later to the moisture and temperature conditions. A relatively high temperature of soil together with a high percentage of moisture is conducive to infection. It is important, therefore, that the temperature be kept as low as possible for a good healthy growth of the carnation plant. This temperature, since it is lower than that of the optimum temperature of the fungus, will prove an important factor in the control of infection.

L. J. REUTER CO. *Plant Brokers* 15 Cedar St., WATERTOWN STA.
BOSTON, MASS.

Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

THE FLORISTS' AND GARDENERS' FIELD DAY

Although the attendance was not as large as it ought to have been, those members of the Gardeners' and Florists' Club, of Boston, who attended the field day at North Abington, last Saturday, were well repaid for the effort which they made to be present. Conveyances met those who came by train to North Abington, although many members drove over the road from Boston. Mr. D. D. Wyman, of the Bay State Nursery Co., was on hand to act as host for his company, while Mr. W. G. Wyman, of Littlefield & Wyman Co., represented that concern.

After inspecting the well arranged nurseries of the former company the machines toured the grounds, viewing the evergreens, of which there is a remarkable collection, comprising all of the stock commonly handled by nurserymen, including a fine planting of box. The stock was in remarkably fine condition, and those present expressed their surprise of the fact that the fields were so green, considering the difficulties in getting labor which prevail now. A considerable number of men are employed all the year round in these nurseries, but the number is greatly augmented in the fall when digging begins. This work will be started now in a few weeks.

From the evergreen nurseries the machines traveled to Littlefield & Wyman's greenhouses, a short distance away. The principal house is 318 feet long by 24 feet 8 inches wide, and is filled entirely with carnations. Most of the standard varieties are grown, but in addition there is a good stock of Eastern Morn, a remarkably good pink, of which this company has all the stock. Mr. Wyman called the attention of the visitors to one long bench where a very marked difference in the

character of the soil was to be distinguished at a certain point. At one side the carnations were much farther advanced and more thrifty looking than at the other. Mr. Wyman then said that an experiment had been tried, with quite surprising results. In one case the manure had been mixed with the soil in the spring. It was in the half of the bench where this soil had been used where the plants were least thrifty. On the other half the soil and manure had been mixed just before the benches were filled, and the condition of the plants seems to give evidence that this was by all means the most desirable method.

The next place visited was the herbaceous grounds of the Bay State Nursery Co., on the road to Rockland. A large area was found given over to perennials, and there was an especially fine block of Mallows and Phlox.

The trip was then resumed over a fine road into a section of Rockland with which most of the visitors were not familiar. In fact, few of them realized that the Bay State Nurseries had another branch in this part of the town. Here two farms had been purchased and partly planted. Conspicuous among the stock seen here were the rhododendrons which were in the best of condition. Although little propagation of rhododendrons has been done, Mr. Wyman hopes to take up this work if the right location can be obtained.

A road which runs through this nursery penetrates a dense forest and at a most romantic spot in the midst of the woods, with a running brook at one side and wild flowers blooming all around, a table had been loaded with sandwiches and soft drinks. The refreshments had been provided to show the hospitality of the Bay State Nurseries and Littlefield & Wyman, and

were in great abundance. After the inner man had been satisfied, a little speech making was indulged in, President Barsch, of the club, Secretary Craig, Mr. F. G. Palmer, and Gustav Thommen being among those who spoke. All of the speakers praised the condition of the nurseries and expressed their appreciation of the hospitality of the owners. President Barsch also gave a little account of his recent trip to Canada during which he attended a meeting of the Canadian Association of Florists. Mr. Wyman made a grateful response and discussed at some length the hardships of the various embargoes now in force which are especially inimicable to the best interests of New England. He said he thought it would be only fair if some sort of reciprocal action might be taken against states which profit because of the bars which have been raised against New England stock.

The trip was then resumed, and led to the nurseries of Littlefield & Wyman Co., where some very excellent shrubs and trees were inspected. Although this concern has not been in business long it has made rapid progress in developing both its trade and its equipment. This was the last stop.

The Bay State Nurseries have nearly 300 acres under cultivation, making one of the largest establishments of the kind in New England. It has filled many very large orders, and now has one such order under way. It calls for several car loads of shrubbery to be sent to the Walter Reed Hospital, at Washington, where the government plans to make very extensive and elaborate plantings.

A new store has been opened in East St. Louis, by Haun & Weiss. Mr. Haun was formerly connected with Grimm & Gorly.

No. 10

THE TALK OF THE TRADE

We have hardly finished with carnation blooms when the first lots of under glass flowers show up on the market. One doesn't have to look very far or for very long to decide what varieties are good for early cutting. As usual, Matchless heads the list in white, and Morning Glow comes right along on an equal basis. It has good color, wonderful fragrance, and the keeping qualities run ahead of most varieties at this season. There will be a lot of Morning Glow on the market this winter, but I am inclined to think that flowers of this variety will be taken up nicely and that there will be no surplus.

It is too early to say anything about any of the other newer varieties, but so far as the plants go at this time, I have been very favorably impressed with the condition of Ruth Baur. During the spring and very early summer, there was some complaint about the stock not being in good condition, but from what I can see now this variety seems to have constitution strong enough to give it a good come-back, and I have had the pleasure of seeing several lots lately in very good condition. I certainly hope that Ruth Baur will give all that has been promised, and I can't help thinking that I have faith in this variety

From all directions I hear good reports about field-grown hydrangeas. There is a fine lot of stock in the field ranging from small plants up to as large as any grower will want to handle. The stock, generally speaking, is in excellent condition, and no grower in need of pot plants for retail trade can afford to do without a good, liberal proportion of hydrangeas, particularly the French sorts. Any who haven't all that they need will do well to buy in at this time, as good stock is available and at reasonable prices.

Marguerites as flowering plants are very satisfactory. It is an easy crop to handle, is not so slow growing that it cannot be handled at a profit even at moderate prices. I am of the opinion, however, that the best of the whole lot is the old-fashioned single white called Paris Daisy. It throws an abundance of blooms, is very easy to

grow, and in every way I think is the most satisfactory. Of course, the yellow is also a good sort, but not so easy to handle. At the same time it is well worth the extra trouble needed to finish it properly.

Since the Federal embargo has been in effect, there has been a decided shortage of field-grown roses in ramblers and baby ramblers, but sufficient time has already elapsed for a number of up-to-date growers to get nice stocks started for their own use

and I can't see why every grower who has a piece of land available doesn't grow his own ramblers. It can easily be done and three years will give fine forcing stock. Two year old baby ramblers will give good results, but three year plants are better. Such varieties as Baby Rambler, Orleans, Erna Teschendorff and Jessie are among the best, and of course, in the large ramblers there is none any better than Tausendschoen, although Dorothy Perkins and Crimson Rambler are also very satisfactory varieties.

While speaking of pot plants for win-

Snow King, a Very White Gladiolus

ter use, why don't more florists handle *Coleus Brilliancy* and *Salvador*? A single stemmed plant in a four to five-inch pot of either of those varieties is mighty attractive, and branched plants also make good specimens. They are not expensive, and of course, outside of a little trouble from mealy bug are about as easy to handle in the green-houses and about as satisfactory after the customer gets them in the dwelling houses as any plant that is offered.

I doubt if Pres. Thomas Roland felt very much flattered when he saw the picture of himself published in the Chicago trade papers. Certainly nobody will recognize him from these cuts, which must have been made long ago. Pres. Roland is too good looking a man to have himself misrepresented to the trade in this way. That is not saying that the pictures used do not show a good looking man. They were all right for the time they were taken, but if anything Mr. Roland, like good wine, has improved with age. The use of old cuts, by the way, showed how much of a dark horse Mr. Roland was. Of course if his election had been anticipated in Chicago, new pictures would have been secured. However, the Chicago members of the association are thoroughly well pleased with the choice of Mr. Roland, and will support him to the limit.

REGISTRATION OF ROSES

The following roses have been approved by the registration committee of the American Rose Society, and unless objections are received within three weeks of this publication the registration will become permanent:

Name—Red Columbia.

Class—Hybrid Tea.

Parentage—Sport of Columbia.

Description—The general habit of the plant, character of the foliage, and freedom of growth and hardiness is the same as Columbia. The flower is a long-pointed bud of good texture, and of a brilliant scarlet color which is similar to Hoosier Beauty. The petalage, however, is not as full as Columbia. Freedom of bloom and lasting qualities all that can be desired.

Offered for registration by the Joe. H. Hill Company.

Name—Betty Alden.

Class—Polyantha.

Parentage—Tausendschon × Dwarf Polyantha.

Description—Vigorous growth with glossy, dark green foliage; medium in size; very vigorous and hardy bud; flowers single, in clusters; color, apple-blossom pink changing to pure white.

Offered for registration by R. & J. Farquhar.

Name—Beacon Belle.

Class—Polyantha.

Parentage—Tausendschon × Dwarf Polyantha.

Description—Habit of plant, character of foliage, freedom of growth and hardiness similar to Betty Alden. Flowers in clusters, very double and many petaled and close; flesh color becoming pure white when in full bloom; fragrance slight.

Offered for registration by R. & J. Farquhar.

Name—Boston Beauty.

Class—Polyantha.

Parentage—Tausendschon × Dwarf Polyantha.

Description—Habit of plant, vigorous with leathery dark green foliage; hardy in growth; flowers in clusters full and double. It is clear pink in color with strong fragrance.

Offered for registration by R. & J. Farquhar.

(Signed) E. A. WHITE, Secy.

MISS MAEDER PROSPERING

Miss Ruth Maeder's flower shop at 706 North Third street is to be enlarged and beautified within the next couple of weeks, she has announced. A couple months ago Miss Maeder took over the entire first floor of the Montgomery building, which she occupies and provided a store room, work and storage rooms.

The growth of the flower business has made it necessary to enlarge the store. During the last couple weeks Miss Maeder said there has been an exceptionally heavy demand for flowers.—Harrisburg, Pa. Patriot.

THE BULB OUTLOOK

Some Differences of Opinion, but Certain Kinds Are Known to Be Short

According to Bernard Rynveld of F. Rynveld & Son of New York, as quoted in the seed world, the bulb crop in Holland is not as good as last year's, and yet is fair and ought to provide plenty to go around. The demand from Scandinavia has fallen off, which development would normally send more bulbs in this direction. However, the demand from England gives promise of being heavier than usual, which may use up any anticipated surplus. The bulk of the English orders will probably be placed during August enabling a clearer view of the situation to be obtained by September.

French bulbs are decidedly scarce,

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00
PRINCESS OF WALES..	10.00	95.00

especially Soliel D'Or narcissi, and candidum lilies. Even of paper-whites, says, Mr. Rynveld, the supply is such that there will probably be fewer on hand than was anticipated. This condition in France appears also to be true, in part, to labor troubles, and partly to the fact that increasing

numbers of growers are electing to leave their bulbs in the ground and sell the flowers during December and January. Ordinarily this might not pay, but with the price of blooms where it has been for the past season or so, it has been a decidedly attractive proposition.

All in all, the bulb situation appears, to Mr. Rynveld, to be brighter than it has been; the fact that Holland prices show a downward tendency, he says, does not indicate that previous prices have been exorbitant, but simply that a slightly larger supply and lessened yield are getting in their work. The attitude of the associated growers, or rather exporters of that country is not one of desire to make excessive or wartime profits, but simply to get enough to make the growing of bulbs a moderately profitable venture for those who are carrying it on.

Mr. Scheepers' Opinion.

Nevertheless, the retail trade has yet to feel really satisfied with the bulb situation. According to John Scheepers of 520 Fifth avenue, of Soliel D'Or there is only about eight per cent of a normal supply in sight. Formosum lilies will be late and probably will not arrive until the end of October because the Japanese dealers are while buyers refuse to pay their prices. At this end the steamship companies are acting in a discouragingly independent manner as to the delivery of bulb shipments to consignees, until the loss of several cases out of a shipment and no end of confusion in locating them are common occurrences. "Never," says Mr. Scheepers, "have I seen such a situation as regards the transportation of bulb stocks."

Of domestic sorts, he reports a big shortage of Freesias in all sizes above five-eighths of an inch. Personally he favors moderate sized, solid, well ripened bulbs—say about three-quarters of an inch in diameter. But there is a very live demand on the part of amateurs and some professionals, for big ones and the shortage of these is bound to cause a howl.

Mr. Scheepers is of the opinion that although the general discussion of the Holland bulb situation may have done considerable good, still there is a chance that the independent growers and shippers may undo it if they attempt to revive the old time auction sales which are usually thought of in connection with the stock untrue to name, of questionable quality, etc. However, the statements of Mr. Rynveld have a bearing here. Provided the expected large demand from England materializes, there will be so small a surplus of bulbs on hand that there may not be enough to justify auctions here or anywhere else.

Of course there are in the nature of a last resort and it is not probable that any grower or exporter would make use of that method of clearing up his stocks if he could see any other way out.

Owing to the absence from New York of many enthusiastic and important horticultural patrons during the summer, comparatively little has been done of late regarding the Horticultural Hall project, says Chairman Scheepers. However, the plan is still very much alive and alternative projects are being put in shape so that with the beginning of another season definite steps will be taken without delay.

GROWS BULBS IN WASHINGTON

Bellingham, Wash.—The citizens of this town and district have started a movement to become competitors of the tulip bulb growers of Holland.

The federal government's only tulip, narcissus and hyacinth bulb experimental farm is located here. Not until this year has there been a concerted endeavor to start and commercialize a great bulb-growing industry, not only in Bellingham's territory at the north end of Puget Sound, but in considerable of the Puget Sound country. This year the bulb experimental farm will dig up 1,000,000 bulbs, it has just been stated by those in charge.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

The situation is still confused as regards the bulb outlook. Some importers contend that the prospects are brighter for a good supply at a reasonable price; others insist that they fail to see such favorable tendencies. Certainly there is bound to be a scarcity of French bulbs of several kinds. Whether this will apply to Paper-whites or not remains as yet to be seen. There also seems to be a shortage of Freesias, especially the larger sizes. One unpleasant feature of the situation is the attitude of the transportation companies, especially the steamship companies, which as Mr. John Scheepers, of New York, has pointed out seem to have little consideration for bulbs, with the results that losses are numerous and hard to trace.

Although the meeting of the Florists' Telegraph Delivery Association held in Cleveland was an informal affair, much was brought out to show that the organization was doing an active work, and that much may be expected at the annual meeting, which will be held at Indianapolis in October. The Association has had a somewhat peculiar situation to handle in the Canadian Exchange matter, and has done everything that could be done to smooth out the difficulties which confront the florist on both sides of the line.

Secretary Pochelon felt moved to issue a warning against any extension of the 20 per cent discount established by the F. T. D. He pointed out several instances where florists have taken off much more, and it seems that they are amenable to discipline from the F. T. D. Mr. Pochelon even intimated that such a thing as a law suit might be possible.

We are not just sure how the members felt about the new publication, the F. T. D. News, copies of which were distributed, but in any event it probably will be some time before the exact position of the new paper is established.

It was to be expected that there would be some differences of opinion in regard to the formation of a National Growers' Association. It is quite natural, too, that some of this opposition should come from the older members of

the S. A. F. who have given years of active effort to the building up of this society, and who feel that the multiplication of other organizations tends to weaken the parent society, or at least to divide the allegiance and activities of its members. Under certain circumstances this might be true, and no doubt there are those who still feel that it is true as regards the National Flower Growers' Association. On the whole, though, the consensus of opinion seems to be that the new organization has a genuine reason for existence, and that the proof of this fact will be evident a few years. Certainly many of the leading growers of the country feel very certain that they can bring about better business conditions by a closer co-operation.

While the S. A. F. is open to many activities, still it covers a very wide field, and many of the growers felt they could not get the leverage which they desired through its medium alone. Of course the Growers' Association is to be in no sense a rival to the parent organization, but will supplement its work, and work to its advantage rather than otherwise. Mr. Ammann, the secretary, is an exceedingly active, energetic man, a man of broad ideas and pronounced foresight, a forceful and eloquent speaker, and possessed of that magnetism which goes far towards making a successful executive.

We feel that a very wise choice was made in the selection of W. J. Keimel for president. Few men have had wider experience in the trade, or understand the growers' situation better. Mr. E. Allen Peirce has been active among the growers of New England in the formation of the new society, and New England growers seem to have taken a prominent part in all the proceedings at Cleveland. For that reason the choice of another New England man as treasurer, Mr. Wallace R. Pierson, was well merited. Mr. Pierson is so well known throughout the trade that his name will go far towards creating confidence among prospective members.

Much is expected from the Growers' Association, and we believe that much will be accomplished by it. When the next regular meeting is held in January in connection with the annual meeting of the National Carnation Society at Washington, the work of the new organization should be so well under way that a good report of its activities can be made.

It is to be hoped that the owners of private greenhouses will show a disposition to keep them open, and, in fact, to enlarge their activities the coming winter, now that the prospect is good for coal enough to go around. Of course the price is high, and a greenhouse is a luxury, but most men who make money freely spend a large part of it for luxuries, and it is difficult to find anything which will give a greater return for the money invested than a greenhouse properly stocked and carefully cared for. The labor problem is easing up, too, and it should not prove very difficult to get reasonably competent greenhouse help this winter, especially in places which are not too remote from the cities. It's a pity, though, so many of the well stocked greenhouses of the country have been allowed to run down. This sort of thing is detrimental to horticultural interests all along the line, and the result has been reflected in some of the shows. Everybody will see a greatly increased tendency towards the enlargement of greenhouse establishments, the making of better gardens, and the creation of worthwhile landscape effects; and certainly no little credit should be given to men, like Mr. Albert C. Burrage, who has consistently and continuously exhibited his orchids at Horticultural Hall throughout the winter and summer. It is due to him in large measure that the Boston shows this season have been so noteworthy as to attract attention all over the country.

THE LANCASTER COUNTY FLORISTS' ASSOCIATION

The 97th regular meeting of this association was held at the home of Mr. Elmer Weaver, Thursday, August 26. "Get that 97th a centenary meeting will soon be due."

The first duty of a real florist is to inspect greenhouses if any are within a hundred miles of him and this was followed out by the entire bunch with T. J. Nolan along to tell us about the good and bad points of construction, but when it came to Chas. M. Weaver's acres of gladioli he wanted to know if they were pineapples.

At Chas. M. Weaver's the usual fine lot of sweet peas are being housed from paper pots; these and pompons will be a feature in the Philadelphia and Pittsburgh markets within the next few months. He has his winter's supply of coal on hand and has no worry on earth excepting the digging of his immense tracts of gladioli bulbs.

At Elmer's the carnation continues to occupy considerable space, one big house to sweet peas well under way, one real rose house filled with Pilgrim roses coming into bloom, over twenty thousand having been cut for August. A big side issue here are the mushroom houses now being filled and spawned and a good sized colony of bees. There are two growing young florists here, Messrs. Paul and Lloyd Weaver who are running mushroom houses of their own and use any space that might be idle in the greenhouses for a few days or months in growing something to add to their bank accounts.

The meeting was held on the porch and after the regular routine of business Mr. Albert M. Herr and Mr. T. J. Nolan reported on the Cleveland Convention. Herr was strong for the new Plant and Cut Flower Growers' Association, but the members want to see something more tangible than the indefinite plans now offered before they will affiliate. It was finally suggested by A. M. Herr that the members attend the meeting of the American Carnation Society in Washington this winter and find out for themselves what has been done and what is under consideration; the majority of those present expect to do this.

Messrs. H. K. Rohrer and Iral Landis reported on their trip to the Gladioli Show in Boston and their side trip to the Gladioli Farm of B. Hammond Tracy where they saw so much new and interesting stock that they considered this alone worth the trip to Boston.

The secretary then reported that he would like the members to individually

Flowers Under Glass

Roman Hyacinths are going to be scarce owing to the action of the French Government in prohibiting shipments, but we understand that a considerable number of these hyacinths have been allowed to come across. If you are going to grow them, you should have the flats and pans in shape so that you can care for the bulbs as soon as they arrive. It is very important that they should have proper drainage, but you can get along with any good compost. Have the top of each bulb pushed down level with the soil, and make the soil fairly firm. Then you can water the pots well and place them in a bulb cellar or outside. If the latter practice is followed, have them set level and cover them with four or five inches of soil. You must give water enough so that they will not dry out.

Poinsettia cuttings can be made up to the first week or two in September, but the last plantings are the least desirable. You must use care when the cuttings are put in sand in the matters of shading, watering and spraying. Never let these plants flag, and when they have become well rooted pot them off, using a mixture of fibrous loam, leaf mold and a little sand. Keep them in their little pots where they will be shaded somewhat and spray often. Later when they are well up to the glass, you can give them full sunshine. Shift to three-inch pots when they become pot bound and plunge them in ashes.

Are your geraniums labeled true to name? This is a matter sometimes overlooked, and it is a good plan to go over the plants while they are in bloom and to tag any that have not come true. Unless you are a geranium expert you will not be able to separate the plants after the flowers have gone. You can make good, stocky plants from left-over geraniums by shifting them to five or six-inch pots. Probably they will be just as hardy as field grown stock, and probably less liable to damp off.

Chrysanthemums should be kept growing steadily with plenty of fresh air day and night. They must have water in abundance, too, and it is a good plan to syringe them several times a day, besides wetting down the

walks. You will need a good insecticide with which to keep the plants clean, and light fumigation every ten days will be a help. You must remember that the black fly will be very persistent from this time on.

If you haven't given your boilers an overhauling, do it now. This is an important matter in a year like this, when coal is scarce and high. You can't expect to have the boilers running a 100 per cent perfect unless they are in first-class shape at the beginning of the season. Among other things you should be careful to look over the smoke pipes and replace any which show signs of weak spots caused by rust. Sometimes it is possible to take the pipes from several boilers, pick out those which are in fair condition, and put them together, buying new pipes for the boiler which is left. In this way you save yourself considerable refitting and patching in future years. Repair the grates if necessary, and see that they are adapted to the fuel which you will have to burn this year. Of course, you will clean out the flues carefully, and if you have steam boilers, you should take out the man holes and get as much dirt off of the flues as is possible. Finally, remove all scales from the inside of the boilers. Sometimes it is allowed to remain on the bottom, but this is a great mistake, as it forms a crust which keeps the water away. This part is exposed to the hottest fire, and will burn and weaken until if high pressure steam has to be carried it may finally blow out. Of course, you will not leave any melted clinkers in the stationary grates. Nothing will choke a fire quicker than having the grates clogged, and the situation is always worse when a poor grade of fuel is burned.

When you fumigate the rose house where cutting is being done, make a point of cutting a little closely the night before. The roses cut the following morning are sure to have some odor of tobacco, but the smoke will not penetrate to the buds left on the plants.

The Wm. Fischer Greenhouses, at Milldale, Conn., have been bought by Fay C. Curtis. Mr. Curtis is a prominent grower of vegetables under glass, but it is understood that he will keep the Fischer plant in flowers.

All the returned pilgrims to the Cleveland Convention seem to be unanimous that it was one of the finest ever held which is a great compliment to the Cleveland boys. Even their grand old man, Adam Graham, who was supposed to be retired 20 years ago, comes in for a high meed of praise. He looked well, spoke well, and acted like a veteran of 50, instead of the 82 the old lady has tagged on him.

And they actually elected Tom Roland! Well, believe me, there is some common sense still left in the good old S. A. F.! And Adolphe Gude, my gudeness, you couldn't beat that, for vice-president. If yours truly had been there, there would have been some shouting. No "balmy zephyr" as Edward Dooner now terms it. The old sarcasm "Caledonian Cyclone" would have been far more appropriate! And the rest of them are fine too. There's a cheering outlook, and J. Horace McFarland has no kicks coming. The billboards didn't get it all their own way.

Wm. J. Muth, representing the King Construction Co. in this latitude, reports three new operations started on by his concern this week (August 23): One at Chadds Farm, one at Chestnut Hill, and one for Macaw Bros. at Norwood. Mr. Muth lives in West Chester, but still retains offices in the Harrison Building, Philadelphia, where he is a daily visitor.

Bert Schilder is making a good success in his operation of the old Aldrich Pennock place. He is making a specialty this season of carnations, chrysanthemums, callas, longiflorums and bulbous stock of various kinds.

Duncan Macaw of Macaw Bros., Norwood, left on a trip to Ireland on the 24th of August. He was accompanied by his mother. His brother Thompson Macaw will manage the place during his partner's absence.

Aug. Doemling has about finished making repairs on the lightning catastrophe to his greenhouses in Lansdowne, but it has been a tough job for him all summer while the other fellows were having a good vacation. However he sees daylight again and

hopes to get a week or two off in September.

Robert Craig, Jr., is back from the Convention and highly pleased with the enormous business his firm did in Cleveland. He says the attendance was wonderful and everything was carried out to the queen's taste.

George S. Faulkner reports business better than could be expected for midsummer at the Cartledge Flower Store (late Biesler) 1410 Susquehanna avenue. A. B. Cartledge, Jr., is also owner of the Cartledge Flower Store in Wilmington, which he manages personally, and Mr. Faulkner takes charge of the Philadelphia institution.

Mr. Cartledge is a graduate (third generation) from the old firm of Pen-nock Bros.

John Habermehl met with severe injuries in an automobile accident at Atlantic City on August 19. He was taken to the Atlantic City Hospital where it was found necessary to put thirteen stitches for cuts about the head. On the 26th he was reported to be still under the care of a trained nurse in a special suite at the seaside resort, and was doing as well as could be expected.

Pilgrim, the newcomer in the rose world, gets a good word from the re-tailers who one and all, are quite frank in their expressions of approval as to its merits. H. H. Battles is especially enthusiastic and declares it is the best rose for harmonious combination on the market. Its lightness of coloring he considers its chief beauty. Where some of the darker roses like Russell make a discord when combined with say delphinium the Pilgrim on the contrary matches perfectly and makes an artist's dream. Coming from the source it does this is praise indeed, and ought to make the rank and file sit up and take notice.

We told the substance of the foregoing paragraph to our distinguished veteran rose grower William Munro. He was very much interested and wished to know why in thunder we hadn't told him all that last February. In which case he would have planted a house of it. The reason for that is simple enough. Mr. Battles only told us the last week in August so how could we quote him seven months ahead of his remarks. But Mr. Munro has a fine house of another one of the good new ones (the Dunlop) and he is very much pleased with it so far. It is making splendid growth.

Some two years ago we quoted Mr. Munro on the Hadley as being the great rose and the one that would hold its own with them all—through thick and thin—for those who knew how to grow it. He is still as firm in his belief on this point as ever, and has a large area of his extensive establishment planted with it. The plants look fine and run from young stock to one year, two and three year—several houses being devoted to the latter.

Some grave and important legal questions are brewing. The law is the law. When we get behind all our little laws, Blackstone looms! And all the little lawyers of the present day,

sit down instantly, when that oracle of a thousand years begins to talk to them. So when the Bill Board men of the S. A. F. start in to loot the reserve fund of that grand old society without warrant they run up against Blackstone and the fundamental laws of the universe from time immemorial. Of course Blackstone covers only what is right. When it comes to burglars that's different.

HOW THE FLOWERS LOVE THE SUNSHINE

All the way along the turnpike to Cape May there seems to be, just now, an old-fashioned flower festival. There's old Grandmother Hollyhock, that your mother loved and talked about so much, and nearby is Grandfather Sunflower, tall and dignified, as if on guard. Gladiolas, phlox, marigolds, bachelor buttons, zinnias, larkspur, coxcomb, heliotrope, fox glove, four-o'clocks and Rose of Sharon are abundantly spread before you to remind you of your old country home.

Take a day off and go back to the happy days when you and mother made garden together

It might be the best way to get a new action started in your life.

Be at home when you like in this hospitable mansion of merchandise, where everybody feels at home.

(Signed) JOHN WANAMAKER.

Aug. 18, 1920.

The nurserymen, seedsmen and florists take their hats off to "America's greatest merchant." The above from one of his recent ads. is one of the many reasons that have endeared him to the horticultural world as well as

people in general. It is a very human touch, and makes everybody love the man as well as his business. Henry Penn and the other publicity men owe him a hearty vote of thanks.

The market shows a better tone this week and flowers have moved off nicely and in marked contrast with early August. Asters are very fine and can be had in all sizes and colors and in ample quantity. The supply of gladioli has dropped down to reasonable proportions and the glut seems to be about over. In roses the good ones sell well but the demand is rather slow on the short stemmed stock. American Beauty made its appearance again this week after an absence of about two months. Two of the new ones, Pilgrim and Dunlop, are also in evidence and are quickly picked up every morning by the wideawake buyers.

Frank B. Michell has been appointed manager of the Michell nurseries at Andalusia, vice Harry A. Bunyard resigned. Mr. Michell is a son of Fred Michell and a nephew of the president of the company. He has had a thorough training from the ground up (both inside and outside) in greenhouse and hardy plant growing for the past six or seven years and in his new responsibilities he promises well, and we extend our best wishes and wish him the biggest kind of success.

Let us quote you special prices on choice quality DAGGERS and FANCY FERNS during September.

HAMILTON BROTHERS

Millington -- -- Mass.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Secretary Rich, of the Massachusetts Horticultural Society, has some good ideas about increasing the value of the flower shows, and incidentally of the societies conducting them. Mr. Rich, in conversation, just after the gladiolus exhibit, said that he believed it would be a splendid idea to have a lecture or talk by some competent man at all shows of that kind. It could be given on one or both afternoons, in one of the halls, and should cover the details of growing, cutting and exhibiting the flowers, as well as taking up different improved varieties. No doubt a great many questions would be asked, too, especially by enthusiastic amateurs.

I think that this would be a strong feature of these shows, and would help to increase the attendance. Probably such talks would be received with greater interest at that time than in the winter, although I should be very

loath to see the series of winter lectures given up.

Another plan which might be carried out to advantage, it seems to me, would be to have a docent at the different shows. Of course, it would be difficult to find a man familiar with the whole range of varieties, but with a little previous coaching, an expert should be able to lead parties about the hall and tell them all they desire to know about the various flower shows.

The Journal of the International Garden Club, dated December, has a remarkably complete, valuable and interesting article on Pacific Coast lilies and their culture, written by that well known grower, Carl Purdy. There are a number of excellent illustrations, including a fine picture of *Lilium Parvum* in color. An article of this

scholarly nature, showing an extremely intimate knowledge of the subject discussed, adds much to the value of any magazine. It is far and away the most important article in this number of the Journal, although Henry Nehrling's description of "My Garden in Florida" makes excellent reading, and seems to be full of information.

Much attention has been attracted this year to the magnificent place of Dr. and Mrs. Homer Gage, called Irlstrophe, at Shrewsbury, Mass. Allen J. Jenkins, in charge, has won a remarkably large number of prizes at the shows this season. He was especially successful at the sweet pea exhibit, when he took 26 prizes, including the Hutchins memorial cup provided by the National Sweet Pea Association in memory of Rev. W. J. Hutchins, who did much towards the development of the sweet pea. It was Mr. Hutchins who wrote the much quoted tribute to the sweet pea:

"The sweet pea has a keel that is meant to seek all shores; it has wings that were meant to fly across all con-

tinents; it has a standard which is friendly to all nations; and it has a fragrance like the universal gospel; yea, a sweet prophecy of welcome everywhere that has been abundantly fulfilled."

Mr. Jenkins also won for Iristhrope a special gold medal given by Jas. Vick & Sons, seedsmen of Rochester, N. Y., for the most meritorious exhibit. The founder of this firm, James Vick, was the first to introduce the sweet pea into America and his son in presenting the medal stated that at that time his father could not sell seed and in order to introduce it gave a free package of the seed with orders with cultural directions for growing the new flower. A bronze medal was also awarded to Iristhrope for an exhibit of a novelty the "Doris," a cerise flower, that bears the name of Mr. Jenkin's five-year-old daughter.

Considering the reputation acquired in such a manner, it is not strange that Iristhrope is being visited by many of the leading horticulturists of the country.

Mr. G. F. Stewart, superintendent of the Lyman estate in Waltham, Mass., always has something of special interest to exhibit at the shows in Horticultural Hall. At the Gladiolus Show he had a remarkably handsome specimen of *Depladema Splendens Profusa*. It was a tall plant, covered with blooms, and was greatly admired by all who saw it. In connection with it was shown a seedling plant much smaller and yet blooming well. This seedling has been named by Mr. Stewart, "Ella

Sewall Lyman." It is to be wished that more of the gardeners on private estates around Boston would bring out their treasures for the enjoyment of the public at the different shows, even though no class may be provided for them.

Herman Bartsch, president of the Gardeners' and Florists' club of Boston, made a little change from his usual routine and attended the convention at Hamilton this season instead of going to Cleveland. He reports a very enjoyable stay and while away visited a number of growers. He said that the Canadian greenhouses were looking none too good, showing that the labor problem was being felt there as well as this side of the line. He speaks of the difficulties arising from the sharp differences in exchange, a condition which is leading some Hollanders to remit through New York and get an extra profit. Mr. Bartsch said that at one of the meetings a very interesting talk was made by Mr. Koster, for whom the Koster Blue Spruce was named. Mr. Koster said that the Federal Horticultural Board's rulings had ruined a number of growers in Holland, and that thousands of plants barred out from the United States had been thrown on the rubbish heap. A visit to the rose growers, Alfred & Son, at Hamilton, was quite interesting. He said that these growers had extensive houses and were doing a good business.

As everybody familiar with the W. W. Edgar Company knows that Mr.

Bartsch is an authority on cyclamen, and an enthusiast where these plants are concerned, it will be realized that he had special interest in the visit to the greenhouses of Wm. C. Hall at Montreal, where remarkably good cyclamen are grown. Mr. Bartsch said that Mr. Hall had some of the finest plants that he had seen and he grew them largely in frames outside.

Karl Foerster in his new book on Modern Hardy Herbaceous Flowering Plants (published in German) classes the peach-leaved campanulas among the "floral nobility" of the garden, in rank close to *Lilium candidum*. *Campanula persicifolia* and its various improved forms have been introduced to American gardeners and landscape architects and offered on the lists of leading firms for a score of years, but whether there has ever been any concerted or even one notable effort made to bring out and use this most beautiful type of bellflowers to its full effect may be still doubted. Some years ago the members of the German Society of Garden Artists and Landscape Architects went on a tour of inspection of parks and gardens in Great Britain. Their report was full of interesting criticism, but all appeared most favorably impressed by the skillful and artistic work in English gardens and I noticed special stress was laid on the beautiful displays of peach-leaved campanulas they had seen. What has the best type of American gardens of the present day to show of such displays? I am afraid very little indeed. Beds or good-sized plantations of *Campanula persicifolia* at flowering time offer such magnificent subjects for the camera that reproductions of photos would have appeared as star illustrations in every volume of our horticultural periodicals by the dozen.

Galgay, the florist, of Cambridge, Mass., is enlarging his store, and greatly improving its appearance. Although in business only a short time he has become well acquainted.

Frank Windler, of the Windler Wholesale Floral Co., St. Louis, was recently married to Miss Frances Kelletta.

SEPTEMBER

There is a sparkle in the air today, the leaves glisten in the sunshine, the grass is radiant and the fields are full of goldenrod and yellow tansy. The sumachs have lighted their red torches. Queen Anne is dropping her laces and building nests. The dreamy charm of listless August is passing into the vigor of the autumn. We must bestir ourselves and prepare for the gathering of our harvests, the red apples and purple grapes. The summer flowers are passing, but the charm of the Michaelmas daisy is by our roadsides. Even the clouds seem to be getting busy for they are no longer forming great dreamy pictures in the skies. In the West there is a golden haze. Did George Fuller paint all his pictures in the witchery of September? We do not know, but as we take our Westward way and see the trucks hauling the harvests home, we think the old order changeth, but the elixir of the autumn is the same as in the old days when Emerson wrote.—
"One harvest from thy field
Homeward brought the over strong

A second crop thine acres yield
Which I gather in a song."

M. R. CASE.

Hillcrest Gardens, Weston,
September 1, 1920.

THE JAPANESE BEETLE

The daily papers have given considerable publicity to the green Japanese beetle (*Popillia japonica*) now occupying a territory of about 15,000 acres in Burlington and Camden counties in New Jersey not far from Philadelphia. It has also been found around Torresdale, Pa., just across the river.

This insect was imported from Japan, probably upon nursery stock. It was first noticed in 1916 by inspectors of the New Jersey State Department of Agriculture. In Japan the beetle is not considered a serious pest, but in this country without its native parasites (as is the case with all imported pests) conditions are favorable for its development and spread.

The adult beetle does the destructive work feeding upon weeds, truck crops, especially corn; as well as orchard, and shade trees. They work in

the day time, instead of at night as is the case with a similar species, the common May beetle. The leaves are skeletonized causing them to turn brown and eventually fall. Most of the beetles are in flight during July and August.

The Japanese beetle is a little larger than the potato beetle and more elongate. The head and thorax are shining bronze green and the elytra or wing covers are brownish, tinged with green at the edges. On the sides are conspicuous white spots which are characteristic of this species and distinguish it from other beetles of this size.

The eggs are laid in the soil during the summer. The grubs when full grown are nearly one inch in length and white with a tan colored head. They resemble the common white grub. It has been found, however, that they do no appreciative harm to growing plants since they prefer decomposing vegetable matter to living roots. The grubs mature the following spring, there being but one brood a year.

Control. At present efforts are being made to prevent the spread of the

pest, to find practical artificial control measures, and to introduce parasites from Japan. Some of the difficulties are: it is a strong flier, it feeds on a large number of host plants, it is difficult to poison, it is repelled by most arsenicals, and it spends about five-sixths of its life underground where it is difficult to locate and hard to reach with insecticides. Some of the controls already tried are spraying with arsenate of lead, and with lime-sulphur; dusting with powdered lime-sulphur or arsenate of lead and lime; cleaning up roadsides and using salt and fire to keep down vegetation; soil insecticides, such as sodium cyanide in solution; clean cultivation, hand picking and a strict quarantine within the known infested area.

There is no question but what this insect is a serious pest. When first noticed only a few beetles could be collected in a day while now 15 to 20,000 can be captured in a day by one person. The skeletonizing and defoliation of trees year after year will soon weaken and kill them. It is evident then, that if the Japanese beetle is not soon controlled it will be classed with the gypsy and brown tail as shade tree pests.

PITTSBURGHERS HAVE AN OUTING

The annual field day of the Pittsburgh Florists' and Gardeners' Club held on Wednesday, August 11, will linger long in the memories of the members and friends who attended. It was a success in any way you take it. Promptly at 10.20 the long line of autos left Sewickley Station for the day's pleasure and it certainly is a treat to visit the beautiful estates of Sewickley Heights. The first stop was made at Mrs. J. B. Oliver's (F. B. Reig, gardener). Everything showed good care, and the walled garden was very good. G. A. Woods (A. Etherington, gardener) was the next stop. Effective plantings of shrubs and evergreens was noted on this place. R. H. Boggs (Geo. Shaw, gardener) and Col. Schoonmaker (John Carman, gardener) was the next stop; both places give credit to the men in charge. Next in order named was J. F. Rogers (A. E. Bonsey, gardener). The Country Club (John Pressler, gardener) and Van Vorhis (H. A. Baumgarten, gardener) —all these places reflected the skill of their caretakers.

The noon lunch stop was made on the estate of J. W. Lyon where our genial president, John Barnet, holds sway. Everything was in tip-top

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

When You Buy—Get a Kroeschell

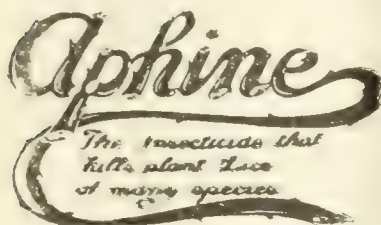

2,016,386 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1918.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

Kroeschell Bros. Co., 400 W. Erie St.

shape. The lunch committee, Mr. Barnett, Mr. Curran, Mr. Boxell and Mr. Thompson, certainly deserve much praise for the bountiful layout. It was simply perfect and everyone enjoyed it. After lunch and a few speeches, especially noteworthy the one of Mr. Cook, inviting us all to Cleveland, not only for the convention but at any time, we were off to our next stop, W. B. Schiller (E. E. Norton, gardener). This place we found in good shape. The next stop was at W. P. Snyder's (Wm. Thompson, gardener). It is a magnificent place and well taken care of. Especially noteworthy were two specimen Staghorn ferns (Platycerium Alcorni) and the formal garden planted solid with pink geraniums. At the next stop, W. R. Willock (R. Boxell, gardener), a fine vegetable garden greeted us and everything else was in good shape. Mrs. E. M. Horn's (Manus Curran, gardener) was the next stop. Everything painted to creditable management and the onions were some onions. The next stop in the order named: H. D. Darlington, Jr. (Rob. Clark, gardener), Alex M.

Laughlin (Thos. Sturgis, gardener), Mrs. Wm. Thaw, Jr. (John M. Jones, gardener). All these places showed skillful care and attention. The annual and perennial gardens on the Laughlin estate, the rockery and fine lawn on the Thaw place, and the hot-house grapes on the Mason place are well worth mentioning. The last stop was at the summer home of Mrs. H. R. Reah (Alex. Davidson, gardener). The evergreens and perennial borders are worth seeing. Mr. Davidson certainly deserves much credit for his able and efficient management. We all went home with a happy heart and joyful anticipation of another field day next year.

CARL BECHERER, Secretary.

THE MARKET

The market remains very dull with sellers ready to accept almost any price that is offered. Business is always quiet in the summer and this season is no exception. But few changes have been noted this week. *Lilium longiflorum* has made quite a jump in several markets and has been

quoted the past week at 20c. Valley is coming in slowly and has gone up a little. Cattleyas also have taken an upward turn and good stock is now selling at \$2. In the Boston market Russell and Premier are again the top notchers in the roses and bring 12c.; most other short-stemmed stock is down to 3c. Naturally there is a great flood of gladioli. It seems that this branch of production is being a little overdone. The prices run up to 3 cents, and some stock is practically given away. The same applies to asters, although very good asters bring 4 cents. It is everybody's market and dull after the first hour.

A MESSAGE TO THE LADIES' SOCIETY OF AMERICAN FLORISTS

It was a very great disappointment to me to leave convention activities before the session closed, and a matter of deep regret that I could not thank the Ladies' Society of American Florists, personally for their gracious gift. I am not only proud to possess this beautiful silver bowl as a testimonial of the loyalty and friendship of the members, but proud to possess it through having served you as your president. It is now filled with luscious pears and apples and in daily use, it will be a constant reminder of years of pleasant association with the L. S. A. F.

With very deep appreciation and gratitude and with all good wishes for the future welfare of the association, I am

Most sincerely,
MRS. B. HAMMOND TRACY,
(President of L. S. A. F.)

Poehlman Bros., of Chicago, have added Edwin G. Westman, formerly of the Burdette Floral Co., St. Louis, to their staff. It is expected that Mr. Weiss will represent the company on the road.

Mr. Nick Shroeder, of the Swiss Floral Co., Portland, Ore., has started for his home in Switzerland, where he will spend a short vacation.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 2,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings, which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.50

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN

It was pleasing at the close of last month to receive from the Broadway Music Corporation, New York, a check for \$302.20, royalties due us on the song "Say it with Flowers," composed by Albert Von Tilzer, and sold to the public. Over 30,000 copies were put out, and we can only imagine the amount of publicity we have received, and are still receiving as the song is rendered. We must not forget, too, the very large number of occasions when this song has been featured, sometimes with special stage settings, and prominent artistes, in theaters, music halls and cabarets throughout the country. Additional publicity has also been gained through the distribution of the song as a phonograph record, the Columbia Graphophone Co., having, we understand, sold many thousands of records, all of which, it is fair to believe, are in constant use.

Another important addition to our fund is the sum of \$1,000 subscribed at the convention of the Texas State Florists' Association, Fort Worth, July 20-22. This is an example of effective organization work. The subscription, of course, although made up of individual subscriptions, is outside of the individual subscriptions from Texas already reported.

The members of our Publicity Committee feel greatly encouraged over an increased interest in their work which is becoming apparent. If every florist in the country would but give proper thought to the campaign, the necessary funds to carry out the committee's plans would soon be forthcoming. They have accomplished wonders with the amount of money made available for them. Mr. S. R. Latshaw a noted publicity expert, recognized this in the address he made before the Cleveland convention of the society. He said: "You have a wonderful slogan, one of the best, probably, in all of the various forms of advertising. With the amount of money that has been put at the disposal of your committee, I say to you from twenty years of experience, during which time probably more than \$100,000,000 of advertising has passed through my hands, that I know of no case when advertising has been done so successfully for so trifling a sum as has been expended up to the present by your society. You have in your catch line, 'Say it with Flowers,' a

very valuable asset, because it conveys such a big idea in such a simple fashion. You have made a magnificent start—you have a real opportunity; there is no question as to the feasibility and profit of educating an entire nation, by national advertising, to the enormously increased use of your commodity."

Can we get away from this "surface-scratching" procedure, and secure the full benefits that will undoubtedly follow a prime effort? We can, if the florists will think enough of their own interests to back them up with their subscriptions to the Campaign Fund. Such a little support from each one is required that it need occasion no hardship. Let us hear from you.

JOHN YOUNG, Secy.

43 West 18th St., New York City.

PRODUCTS OF CHILDREN'S GARDENS AT HORTICULTURAL HALL, BOSTON

It has been my pleasure today to serve as a judge at the exhibition of the Products of Children's Gardens in the hall of the Massachusetts Horticultural Society. The display on entering was pleasing for the flowers were well and simply shown.

A few years ago I visited the Children's Exhibition on Sunday—the second day of the show—and was so impressed by the wilted appearance of the flowers that for the following year I offered two prizes for the Children's Exhibition. One for the flowers which were freshest at the end of the second day of the show, the other for the best arrangement of the flowers. These prizes were later withdrawn, for there are enough prizes and gratuities given to the children. The judges are weary before they all are awarded. Yet the children should be taught how to have their flowers fresh for the show. The flowers should be gathered the morning of the day before the show and kept in water in a dark place where no draught can strike them for

twenty-four hours before the exhibition. When the flowers are brought in from the garden they should be put on a table with vases at hand into which each flower should be put up to its neck in water, after its stem has been cut. Dahlias and flowers with succulent stems should have two slits in the stems from an inch to two or three inches up from the end of the stem. Roses should be cut on the slant, while asters and strong, woody flowers can be just cut across the end of the stem. The reason for these cuts is to open the pores of the stems and give them a chance to get all the water that they need. The following day when the boxes in which they have been carefully packed for the exhibition are opened at the hall immediately before the flowers are

placed in the vases in which they are to be shown the stems should be cut in a similar way. For they have had time to seal over since they were taken from the vases in which they had been kept through the previous day and night and their pores must again be opened.

The flowers have been brought in from the garden, they have had their stems cut, and they have been placed up to their necks in deep vases full of water. They should not be crowded in the vases. If there is a room in a cellar where the vases can be kept with no draught blowing over them, they can be taken there and carefully sprayed with an atomizer or watering-pot with a fine spray to its nozzle. The following morning those who have never tried this way of keeping flowers

will be surprised to see that they are fresher than they were when they were first brought in from the garden. For twenty-four hours they have been quietly filling their stems with water. If no cellar is available the vases can be put in a deep tub covered so that no draught will strike the flowers. This matter of freshness has been dealt with at length because two of the best collections of flowers failed to get first prizes today because they were not fresh.

Flowers can be packed quite tightly in their boxes. It will keep them from being jarred, and from moving about in the boxes. It is better to pack them in boxes or to wrap them carefully in paper when taking them to the shows for they will then retain the water with which their stems have been filled and be fresh on reaching the hall.

We are hoping to get more artistic exhibitions of our gladiolus, sweet peas and iris, but for the present it seems best to encourage the children to show each flower by itself with its name on a label, placed in the glass vases to be found at the hall. There was a fine display of wild flowers made today. Each flower was named and each was shown in a vase by itself. They were all delightfully fresh. Such exhibitions should have every encouragement for they are educational and pleasing. We like to know more about these early autumn flowers.

The children also deserve praise for their fine display of vegetables and for the canning they had done.

Miss L. Gertrude Howes had an interesting and extensive exhibition of the Mary Hemenway School. Connected with this were flower songs and dances by the children of the school.

No. 11

THE TALK OF THE TRADE

There is every indication that Snapdragons will prove as popular with the public this season as in the past years. In any event, many growers are proposing to devote considerable space to these flowers. They seem to pay especially well as a spring crop. It is true that of late years difficulties have attended the growing of Snapdragons, and yet the grower who is careful usually gets good results; and if he has his flowers in the market early enough he is certain to make a good profit.

I find that New England delegates to the S. A. F. convention at Cleveland come back enthusiastic over the outlook for the success of the Grower's Association. I doubt if anywhere in the country, unless it be in Chicago, have the new organization's plans been accepted more spontaneously. No doubt Secretary Ammann will be in New England again this winter, and in that event it is to be hoped that he will make a longer stop, taking advantage of the opportunity to get out among the growers' houses. Wherever Mr. Ammann goes he arouses enthusiasm because of his forceful and eloquent manner of talking.

In his talk at Cleveland Secretary Ammann brought up several points which appealed, I find, to growers not only in New England but also in other parts of the country. I refer to his discussion of plans for collecting publicity funds. He pointed out that while in many communities already organized in a cooperative way, funds are readily collected on a percentage plan, and that the plan works well where sales and purchases go through the commission houses. He went on to show, however, that many other growers throughout the United States sell their own products direct, either at wholesale or retail or both, and that it is not an easy plan, or in fact a feasible practice to apply the percentage plan of collection to such growers. The National Growers' Association meets this situation by putting into its constitution a clause that an amount equal to not less than one dollar per thousand square feet of ground covered with glass shall be collected for local dues, and that an amount equal to not less than fifty per cent per

thousand square feet of ground covered with glass owned or controlled by members of any local unit shall be paid as dues into the national organization annually. Of course this does not mean or say that every local district shall collect on the square foot basis. It can use any plan the members may adopt, the square foot plan, the per cent plan, or a direct assessment per member. Each local district can decide for itself as to method so long as

the lump sum collected is equal to the amount stated. I think this covers a point which has been discussed more widely than any other matter having to do with the publicity campaign.

John C. Meyer, of the Meyer Green Thread Co., of Lowell, tells me that he has been having an excellent trip through the White and Green Mountains. The trip was made by motor, and Mr. Meyer says that he is now back at the mills ready for another season's work, turning out their famous silkline and threads. I under-

WELL GROWN SNAPDRAGONS

stand, by the way, that Meyer & Co. were the first manufacturers to introduce the green smilax and florists' threads throughout the world.

Mr. John Scheepers of New York saw my recent note about the scarcity of Spanish iris and tells me that his firm has been growing this iris for two years now in California, the first planting having been made in the late fall of 1918. Mr. Scheepers says that the second shipment from these plantings is already on the way east. While considerable success has met the effort to grow this iris in the west, there have been plenty of difficulties to encounter, among them a plague of gophers which has carried off a great many bulbs. It is necessary to charge an unusually long price in order to make the venture pay.

Ex-president A. L. Miller, of the S. A. F., seems to have a fine thing in *Primula malcoides Townsendii*. He is pushing it by sending out attractive cards carrying a picture of the plant, but not being in colors the picture cannot show the pleasing lilac-rose shade of the blooms. Evidently the plant has made a hit wherever shown because it has received first class certificate of merit from the New York Florists' Club, the Nassau County Horticultural Society, and the Oyster Bay Horticultural Society. The flowers are pleasing, not only for their color but also for their size, individual blossoms being as large as a twenty-five cent piece. Altogether, *Townsendii* seems to be a revelation in the baby type of prim-rose.

Mr. F. R. Pierson, of Tarrytown, is acquiring a wide reputation as a speaker, especially on horticultural subjects, although that is only one of the many topics about which he talks well. He is about to speak before the Western New York Floricultural Society, on September 17, in Rochester, and the Rochester people gave him a flattering advance notice. The Chronicle says: "Mr. Pierson is credited with having introduced the commercial cultivation of Easter lilies, both in Bermuda and United States, as well as doing recognized work in the improvement of ferns, roses and carnations." His subject on September 17 will be "The Advancement of Rose Growing and Horticulture in General."

A seedman's windows on a main travelled street should always be made educational. When one goes by a good seed store and sees the windows filled up with five hundred little peck bags of lawn grass—how tame and uninteresting that is! If on the contrary

one passes another where the lawn is shown, with the seed standing, and in various stages of development with plenty of pictures and attractive accessories all around, what a difference! And note how the crowd will stop to study the latter, while they will pass the former with hardly a glance. When the season is passed for sowing, then is the time for blooming plants. And have the boys around to book the orders for later delivery. The boys should not be too forward about the booking. Let them be apparently for information. The business will come natural enough, in due course, without being forced. Don't jew them. That ruins the whole thing.

Some will say my gracious we haven't time to bother about windows. We are too busy as it is, everybody working overtime now. That may be true, and yet there is a valuable asset going to waste and the wise executive should find a way. Never leave the window dressing to the apprentices. Job belongs to the best man in the house. And he should be given command of everything and every body and all the assistance needed. It is like the catalogue. Who writes and illustrates the catalogue, the lumpers of the house? The apprentices? The stenos? Not much! That job belongs to the best man in the house and the head of every department has to jump in and co-operate. Well, it's the same thing with the window but, glory be, that gets as far less attention as a rule.

Why not use your connection with the F. T. D. in a business-like way. A plan adopted by Samuel Murray of Kansas City has merit and is worth the consideration of other florists. Mr. Murray gets out a neat little folder for distribution in the trade. It is called "Facts About the Florists' Telegraph Delivery" and reads as follows:

The Florists' Telegraph Delivery Association was formed for the purpose of enabling the retail florist to give better and broader service to his patrons.

It is possible now for anyone buying flowers to have them delivered through his local florist via the Florists' Telegraph Delivery, anywhere, any time, any place, and feel assured of guaranteed service through the seventeen hundred members belonging to this wonderful organization.

The Meaning of Guaranteed Service

Each member of the organization puts up a cash bond when he joins the association, guaranteeing to fill all orders entrusted to him by his fellow members, promptly and carefully.

The customers can feel assured at

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

SAMUEL MURRAY,
1017 Grand Avenue,
Kansas City, Mo.

I am sorry that the coal situation has become so serious, because it is sure to interfere with the operation of private greenhouses. In fact, a good many estate owners have decided to run their houses only in part this year, and of course that is going to interfere with the best horticultural development of the country. Sometimes it is possible to get along with less heat and still get fairly good results.

Now that coal is a little easier in many sections of the country, it is to be hoped that there will be an increased inclination on the part of estate owners to keep their houses in operation. Apparently the help situation is improving, and that is an item of importance, although it is true that wages are high and likely to remain so around town.

I should be interested to know how the plan of using girls for greenhouse work on private places is working out. I know of one estate where the scheme has been given up entirely, but it may be that in other places it is proving a success.

AMERICAN DAHLIA SOCIETY'S SHOW

The sixth annual exhibition of the American Dahlia Society will be held at the Hotel Pennsylvania, New York, September 27, 28 and 29. Additional special prizes of \$25.00 have been offered by William J. Mathewson of New York for the best collection of Cactus Dahlias, 50 varieties, short stems, and the best collection of Decorative Dahlias, 25 varieties, short stems.

The judges for the exhibition will be James Duthie, Oyster Bay, L. I.; Prof. Geo. W. Fraser, Storrs, Conn.; Prof. J. B. S. Norton, Hayattsville, Maryland; James Kirby, Huntington, N. Y.; J. S. Vincent, White Marsh, Maryland; Peter Duff, Orange, N. Y.; John MacNicoll, Cedarhurst, N. Y.; E. Stanley Brown, East Moriches, N.

HORTICULTURAL SOCIETY OF NEW YORK

The regular fall exhibition of this society will be held November 4 to 7, at the American Museum of Natural History. Schedules are now ready for distribution, and will be sent on application to the secretary, George V. Nash, New York Botanical Garden, Bronx Park, N. Y. City.

The premiums are quite different from those of other years, a number of prizes being offered for fruits and vegetables. Substantial premiums are offered for groups of greenhouse foliage and flowering plants, the first prize including, beside the cash, the

society's silver cup valued at \$100.

Send for your schedules early, so that you may get your material in shape, and be able to make your entry at an early date. This will greatly help in the arrangement of the show.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

One of the most significant features of Reconstruction President Miller's address at the recent convention in Cleveland was his reference to reconstruction since the war as it has applied to the florist business. Mr. Miller pointed out that in spite of the many changes which have upset most lines of business, the florist has continued to prosper. Not only has his business increased in volume, but prices have ascended, oftentimes out of proportion to the increase in cost, great as that increase has been.

The question is often asked, "How soon will the point of saturation be reached?" In other words, how soon will it be before the public has reached its limit in the matter of buying flowers? Mr. Miller's answer to his own question is that that point will never be reached. He pointed out that the apex of the florist business recedes as it seems to be approached, and that as far as can be judged there is no prospect of getting beyond the ability and willingness of the public to buy.

Remarkable as it may seem, reconstruction work since the war has not hindered the florist but on the other hand has tended to increase his business. There are reasons for that, however, which do not always appear on the surface. One of them probably is the work which has been done in the way of increased publicity. Sometimes the objection is made that this publicity work has not brought as big returns as it ought to, but the fact is often overlooked that a peculiar situation has had to be met. Under normal conditions it is quite likely that the publicity campaign would have brought about a much more apparent increase, but on the other hand nobody can tell how great the returns might have been if the campaign had not been inaugurated just at the time it was; that is to say, this campaign has been the buffer which has withstood the natural tendency towards a falling off of business. Every florist knows that a large proportion of his old-time customers, especially among the wealthy classes, has been lost, at least in part. They also know that many new customers have been added to their lists, and it is more than probable that these people have been influenced largely through the publicity material appearing in the magazines and papers.

We think, therefore, that Mr. Miller is perfectly justified in the optimistic attitude which he has taken, and that there is no reason to expect the falling away in business which some pessimistic florists like to harp upon. It is true that there may be a certain readjustment and that prices may run more even than during the past year, but probably the florists themselves will not be displeased to have something of this sort come about.

One matter which was stressed at the convention of the Canadian Florists' and Gardeners' Association was the desirability of having gardeners visit each other professionally and socially to a greater extent, as well as getting together on more formal occasions. This is something which ought to interest all members of the profession because the best interests of the profession cannot be attained unless there is a certain amount of co-operation and team work. It seems to us that every private gardener ought to belong to some association, and ought to attend the meetings, and ought to take part in the discussions. If he can also attend the national association meetings, so much the better. Many large minded employers would be glad to pay the expenses of their superintendents to these meetings if the matter were brought to their attention. In any event, the feeling of aloofness which seems to characterize many private gardeners is not for the best interests of the profession, or of their employers, or for that matter, themselves. Let us hope that there will be a greater mingling at social and business meetings, and a decided augmentation of the membership of the gardeners' societies.

Apparently there is great confusion in the seed market. According to the New York correspondent of the Seed World, who keeps his finger on the pulse of the trade at all times, the dominant feeling seems to be an expectation of inevitable lower prices. It is even predicted in some quarters that the bottom is going to fall out of the market when new seed begins to flood it, and that there are plenty of red lights to be seen ahead, and but few green ones. Others predict simply a period of stagnation, lessened demand and lower value, but do not believe that the outlook is as dismal as some experts would make it. Nevertheless, everything seems to point to lower prices. Orders have been cut down, and deliveries interfered with, owing to labor and transportation difficulties. The fact that less land was planted last spring has brought about a surplus of seed in some quarters. Probably the carry over is as large, if not larger, than in most past years. As is pointed out by the writer mentioned, this condition in any other line of business would mean the general shutting down or curtailing of production. Of course this sort of thing is not possible in the seed business. The new crop is coming in, and it must be disposed of. Within a very short time that crop will be on the market, regardless of the demand. Meanwhile, everybody is guessing just what the ultimate result will be.

Another interesting feature of the seed trade outlook is the probability that ten cent packages will be the usual thing next season. According to the Seed World, many of the larger seed houses are contemplating the adoption of a standard price of ten cents per packet, and whether or not it would affect the total amount of sales nobody can decide in advance. In any event it would simplify matters for the seed dealers, and probably the public would soon become as accustomed to ten cents as its unit of value as it has been to a nickel in the past.

Flowers Under Glass

As soon as the nights begin to get cool do not delay putting on the steam. If the thermometer outside goes as low as 50 degrees, the temperature in the houses will go too low for best results with roses. That does not mean that it is necessary to close the ventilators, however. It is better to have plenty of ventilation and enough heat to keep the temperature up to 64 at night. It will be especially necessary to have plenty of air during the day. While the grower may hesitate to use high priced coal so early in the season, the results will be shown in the increased vigor of the plants. You can prevent the appearance of mildew by using a little sulphur on the pipes every eight or ten feet, but be careful to add a little lime to the sulphur if the pressure in the pipes exceeds five pounds because the lime will keep the sulphur from vaporizing too rapidly. Otherwise some damage may be done. It is necessary to be especially careful with the houses from now on because while roses with plenty of tops will take water in abundance, it is very injurious to keep them soaking wet. When the soil dries out enough so that it is merely moist, then is the time to give the plants another good watering with the water dripping freely through the benches. Avoid using too much pressure, for in that case you may wash the surface of the soil too badly. When you apply the water gently the soil does not pack, and is kept open for the entrance of oxygen. This is a fact not always realized by greenhouse growers but when water is applied with great force it produces a film of mud over the soil, and unless the soil is afterwards raked over the roots will suffer from lack of air. Moreover, there is danger of tearing the roots by the force of the water. If you are watering old plants that have been cut back and transplanted, it is best to withhold water from those that are not strong, as they will come along very well if kept on the dry side, while over watering them will surely cause them to perish quickly. An easy way to mark them when they are growing among tall plants is to scatter a little lime around them on the surface. The lime will show up at once so that the oper-

ator will be able to distinguish these plants from the others.

Asparagus and smilax must be well fed now, as they should have a good supply of roots, and with good feeding they will grow very rapidly. Remember that you can get much better growth with these greens while the days are long, with plenty of sunshine. If you happen to have a little chicken manure, use it regularly but sparingly. Without it you will do well to apply a little nitrate of soda. Use these fertilizers about every two weeks.

There will be no falling off with the demand for tulip bulbs this season. It is evident that the growers are planning for a big sale in spite of the probable high prices. In potting up tulip bulbs use a light but moderately rich compost, say two-thirds loam, one-third old manure, with the addition of a little leaf mold and some sharp sand. If you can make it up beforehand and have it well mixed, so much the better. Do not add commercial fertilizers of any kind to the soil, as you will do more damage than good. After planting the bulbs, water them thoroughly and place them outside under five or six inches of soil where they can stay until needed.

There is likely to be much warm, humid weather before the end of September, and for that reason the Cattleyas should not be given too dense shade. It's a great advantage to have rollers or other movable shades for orchid houses because then the plants can be given a maximum of light when it is needed most. Do the watering in the morning, and give it most liberally to C. labiata, Trianae, Mossiae, Percivaliana. Such plants as C. Gaskelliana, Dowiana and others just starting into growth will need less moisture. The Cattleyas are improved by a spraying every clear afternoon, but early enough so that they will dry before nightfall. Run your Cattleya houses from 50 to 65 degrees at night, but leave some air on no matter what the outside temperature may be.

Your freesia bulbs will need to be kept well up to the glass and have the soil moist, although never too wet. You will need supports to keep them upright. Plants which are several inches high should be moved into a sunny house in order to get them into flower as early as possible. Oftentimes a house can be used in which there are shelves where the freesias can be grown.

George Watson's Corner

"You in your small corner and me
in mine."

Steve Mortensen reports his planting of the rose Pilgrim as having turned out very satisfactory. He put in two thousand plants last Spring and it has paid so well he wishes now he had put in ten thousand.

Back to work again, boys. Summer loafing is over. Most of the wholesale flower stores announce the usual Fall and Winter 7 a. m. to 5 p. m. on and after September thirteenth.

The latest slogan of the S. A. F. secretary in regard to publicity work is fine, up to the last paragraph where he tries to sell some more of those billboards. The florists best way is to Say it with Flowers, not with a billboard. There may be some excuse for a seedsman saying it with a billboard but for a florist or nurseryman none whatever. The latter can say it with the things themselves in all their glory. A seed is a hidden proposition but even in the seedsmen's case there are better ways than billboards.

In regards to the slackers on the subscription list they are very human. About ninety-five per cent of the human beings born into this world alive are looking for "something for nothing." So long as they can get something for nothing they are tickled to death. If the other fellow is willing to put up for the advertising he's a brave laddie. Of course that is not said out loud. Oh no! The only thing to do with the slacker is to go after him personally and make him cough up. If he won't then you have the publicity weapon on the contra side and he is very much afraid of that. Nine times out of ten he will come across to the courteous and affable argument, but to a screed in the paper about the other villians (he is never one of them) nothing doing. You may talk there, until the cows come home. Systematize the thing and go after them personally. That is the only way.

Dahlias are now beginning to show up in the market and some really good flowers are to be seen. When good specimens of such varieties as Madame Lumiere, the beautiful crimson and white of the decorative type, are to be seen, we may conclude that the

season is on for fair, and that the dahlia will hold a conspicuous place from now until frost.

It is a far cry to the City of Mexico from the Quaker city. And yet the conversation of Ralph Faust of the Pennock Co. takes you right there and holds you by the hour while he tells

you interesting stories of his sojourn among the Mexicans. He sold them tanned kid leather (made in Philadelphia) at first; then he started a tannery down there and showed the Mexicans how to get their own "goats." Which is a bad pun; but you can imagine it turned out to be a good "kid" for the Dons!

Helps for the Retail Florist

Important Suggestions Made by S. A. McFadden of Toronto

Among the most valuable and important papers read at the recent convention of the Canadian Florists and Gardeners' Association was one by Mr. S. A. McFadden of Toronto. It was as follows:

If you are a retailer and not in love with your calling, you are in the wrong business. The selling and working with flowers is a lovely occupation, and if you are not in love with it, don't stay with the business. Choose the line you are in love with, if you want to make a real success. Sometimes in the rush of business, with its worries and perplexities, we do not see the beauty of the product we handle. Commercialism crowds out the beauty for the time being, but it is there just the same, and if we realize and appreciate it, we are made much better men and women.

Qualifications of Retailer.

The "running" of a retail flower shop is "some job." It is a man's job, and calls upon one to be resourceful and up-to-date in every way. The retailer must not only be a merchant and know something of finance, but he must be an artist as well. Unfortunately, the majority of us have not all these qualities combined. Some of us are artistic, but have not the executive ability; others are experts in store management and financial matters, but have not the eye and touch of the artist. Fortunate are we

indeed if we have all these qualities combined. Just in proportion to the measure of these properties we possess, will be the measure of success of our business.

The retailer must also be honest, for honesty is the best policy, giving value and service for every dollar spent in his store. Not having two prices—not trying to get more from one customer than from another for the same article—but ever endeavoring to practice the Golden Rule: Not trying to get the best of any one, but doing unto those—customers, employees, wholesalers and growers—as he would they should do unto him. Gentlemen, this is an old, old rule, but one that is not used enough. If used every day in every transaction, the wheels of our dealings with our fellow-men would run more smoothly. Our character would be built up; and soon, for some of us at any rate, our reputation and character would coincide. Reputation is what a man is known by; character is what he really is.

Buying and Selling

The buying of stock for a retail establishment should be left in the hands of one person, especially in the large stores where there are a number of employees. He will know better the needs of the place, and will be better in touch with the market, the quality of stock and where the

best comes from. Do not over stock, but have a good variety and keep it looking fresh and clean.

Keep your old stock out of sight, for a vase of stale, wilted, half dead flowers sitting around in view of your customers is not a good advertisement for your business. A vase of good fresh bloom will often sell itself, with little or no effort on the part of your salesman. Do not let old flowers be sent out from your store. It will react on you some time, and it will be hard conscientiously to explain to a customer why such stock was sent.

Satisfied customers are a necessary asset to any business. I know of one firm of retailers whose salesmen go on the principle that the customer is never wrong. Acknowledge you are wrong before a customer gets angry. Remove the cause of the "kick," and you still have your customer. Of course, there are always a few chronic "kickers" in every list of patrons, but in time you will know these and can deal with them accordingly. Be on the job. Don't be always out. Customers like to see the proprietor or manager around the store. It tells them you are there looking after their interests. Get to know your customers by name and speak to them, even if you are not serving them. It invites confidence in your establishment.

Keep your invoices of stock of the busy seasons. Also keep a list of what is left over and what did not sell. It will be a great aid to you when ordering for the next season. You will be able to order in a systematic way, and will not have to guess at the quantity you need.

Good salesmanship does not consist alone in selling the most stock and in making the most monetary sales, but also consists in profitably serving yourself and patrons.

Art and Harmony of Colors

Art is a prime necessity in the flower business. Nature is a wonderful teacher, and the more we keep to nature the more artistic we will be. Study the nature and the growth of the flowers you use and embody these as much as possible in your designing and making up. Do not overlook

color combinations. Some beautiful artistic effects are spoiled by the introduction of some colors that "fight" with the others. Because you have some flowers that need using, but do not go well together, is no reason why you should make them up.

Don't make a pillow like I saw in a florist shop not long ago. In it were cattleyas, Columbia roses, Ward carnations and a few odds and ends of other flowers left over. The effect was enough to "jar" the least artistic sense of any person. If the dead person to whose funeral it was going was artistic in the smallest degree, it would wake him from his lasting sleep. Pardon me for saying that the effect of this pillow was "fierce."

Have your designs and made-up pieces simple and with a harmony of color. It will save you flowers. Art is not extravagant, but is economical. You will agree with me when I say that a mass of flowers is not artistic. It may be effective, but not always pleasing to the eye. A few flowers in a vase, design or bouquet is far more pleasing. Getting an effect that is pleasing to the eye is the first lesson in art. Right proportion and harmony of color follow.

Floral Arrangement

Art in floral arrangement is a big subject and one worthy of a paper by itself. I have said enough here, I hope, to make you think of what effect your work has upon the aesthetic senses of your customers. A florist has great possibilities. He has the beautiful natural material, and it is his opportunity to use it to advantage to show his original ideas.

Keep your store clean and up-to-date. Do not overcrowd it with stock. A few specimen plants and a few artistically filled vases or baskets will be more effective and pleasing. The same remark applies to your window. The day is past when an up-to-date florist crowds all his stock into his window, irrespective of whether the different flowers and colors go well together or not. The window display is the best advertising the retailer has, and it should always be lovely and beautiful with seasonable stock and new ideas. It tells the public the kind of business you are conducting. Does your window say you are a first-class florist or a second-rate one?

The question of prices is worthy of some consideration. I am not a believer in high prices, but I think the retail florist should be paid well for his product and ideas. "A laborer is worthy of his hire." Nor am I in favor of the cutting of prices. Bar-

gain sales in flowers do not to any great extent benefit either the grower or retailer. In times of surplus of stock, some other way than the cutting of prices could be found to move the surplus. It cheapens the product we handle to cut the price. This is a matter for consideration and co-operation between grower and retailer, and one I would like to hear discussed at this convention.

Income Tax Beneficial

The enacting of the income tax law has been a good thing for the retail florist. It has also been good for other merchants. It has shown some of you retailers that you are not conducting your business on a paying basis. When you figured out your business for the year, the way the taxing officer wanted, you were surprised to learn that you had nothing or very little to tax. Why? Because you have not been conducting your business in a systematic way. A few years ago you were satisfied that a certain percentage on cost would pay your losses, your overhead and run-

ning expenses and leave a fair remuneration for you. You have kept on doing this during these years of high cost of everything without keeping an accurate account of what it is now costing you to do business. Your tax returns, if you have made one, has shown you that this percentage on original cost is not enough for these days of high prices. Be systematic. Put some business methods into your business. Keep an accurate account of what it is costing you for rent, repairs, boxes, wrapping material, wages and delivery. Then, and then only, will you know whether or not you are getting something for your enterprise and efforts.

Selling to Undertakers and Agents

This matter of working for little or nothing brings me to the question of selling to undertakers and agents. Be honest now. Are you giving to the original purchaser a square deal, and the same value he would get for his money if he came direct to your store? Or, are you adding to your regular price the percentage of discount you

allow your agent? I do not want to criticize the practice, along this line, of any retailer. The point I want to bring out are these:

First, if you are adding to your regular prices the amount of discount you allow your agent, then, allowing him to deduct this amount for his profit when paying you, you are not giving the original purchaser a square deal. In other words, you are not paying your agent for getting the order, but you are making the purchaser pay.

Second, and I wish to emphasize this more than my first point, if you allow your agent a discount off your regular prices, nine times out of ten, he makes more money than you and does not work so hard for it, unless you allow a very small discount. The large and varrying discount allowed is the iniquity of the system. I know of some firms that allow 33 1-3 per cent off. Now, if you can allow this amount off your regular prices, get up at all hours to catch an express train, fill your 12, 14 or 16-inch design at your list price when stock is scarce and high-priced, and make for yourself the amount of discount allowed, you are some financier!

These are days of reconstruction and cooperation. Retailers, get together with your brother retailers and discuss matters like these I have mentioned! If there is an injustice or iniquity in the practice of giving discounts let it be removed. Let us reconstruct our business, if necessary, along progressive paying lines, never forgetting the rights of the other fellow.

Matters That Need Remedying

There are other matters which need remedying, such as the proper grading of cut bloom, the equitable adjusting of damages from poor packing, and the sending in of stock in an unmarketable condition. These and other questions can only be adjusted by cooperation and working together, for "in unity there is strength."

More Echoes From The D. & P. Range

Come to think about it, that word echoes just doesn't fit at all, at all.

An echo is a noise, after the noise has stopped noising.

And you know, and we know that although the noise Duckham and Pierson is making, may not be so loud, still the things they are doing are good and big.

By big, don't exactly mean big houses, and big costs, so much as a uniform bigness.

A bigness that results in such a dependable quality and quantity of roses, that rumor tells of prices uniformly above the market.

When it comes to the houses, and equipment in general, we frankly believe it's one of the very finest things we have done.

Furthermore, both Mr. Duckham and Mr. Pierson have been most courteous in welcoming visitors we may take to see the houses.

One of the things for which the range is particularly worth visiting is the heating plant.

It's entire freedom from pumps, traps and any of the usual complications will open your eyes.

With coal costs what they are, a perfect working gravity system is like the ads. say of Diston's saws: "a mighty handy thing to have about the place."

Soon firing time will come around again.

Long before it does, why don't you let us take you over to see this heating?

You may get some ideas that will save you a lot of grief.

The way the wind scots down across the valley is a caution. But the gables are both end and side braced against it.

The other photo shows the side braces from the inside. This one from the outside.

NATIONAL PUBLICITY CAMPAIGN.

The Publicity Committee is to meet in Indianapolis on October 12, during the convention period of the Florists' Telegraph Delivery Association. At this meeting plans will be made for additional publicity, and various details in relation to the campaign will be discussed and arranged.

One very important matter will engage the attention of the Committee, and that is the non-fulfillment of the subscription guarantees of a number of subscribers. The committee have, all along, been hampered in their plans, because of money expected not being available. The secretary has a bunch of guarantees which have no negotiable value, and unless those who made them will honor them, they only serve as reminders of so many broken pledges. Statements were recently mailed to all these delinquents, but the response would hardly seem to have warranted the postal expense. It is hoped that these obligations will be discharged before the committee meets, as the list of them will not make pleasant reading.

It should be a pleasure for every florist, as well as a duty, to subscribe to our campaign fund. There is absolutely no doubt as to the benefit which has, so far, been accomplished. Many of us remember what Mr. Latshaw told us, in Cleveland, the raisin producers had accomplished through their magazine publicity. He said: "The raisin growers were unable to market their entire crop, even at most unsatisfactorily low prices—ruinously low in fact. The per capita consumption of raisins per year in this country at that time was one pound. The problem was to increase the consumption of raisins. The Raisin Association did it with a national magazine educational campaign. They purchased beautiful color pages illustrating luscious raisin desserts that made the reader's mouth fairly water in anticipated delight. They suggested to the housewife new, better and more profitable ways to use raisins. And as a result, in three years they raised the consumption of raisins to three pounds per capita. The price for raisins today, while low, is satisfactory, and instead of there being thousands of tons to carry over, the crop is thousands of pounds short."

All we need is that the florists enthruse a little in this publicity work.

We used to point with pride to the florists as being remarkably generous body of men, yet we find that their generosity was outside of their calling—they certainly are not showing much generosity to themselves, if we are to judge by the general contributions to the fund. Mr. Latshaw said truly: "Comparatively few have borne all the expenses up to the present. But the benefits have been shared by all. When you, as a whole, understand the problem before you, and the opportunity, and realize that you have a practical method for solving that problem, and improving the opportunity, surely then, no man would be such a cheap skate and a piker as to wish to benefit and ride on the shoulders of his fellow florists who pay his bills for him."

NEW SUBSCRIPTIONS

The following subscriptions are in addition to those previously announced; annually for four years unless otherwise stated:

NATIONAL ASSOCIATION OF GARDENERS

Annual Meeting Held at St. Louis—
Much Important Business Transacted—
New York Selected for Next Convention.

The annual convention of the National Association of Gardeners was held at the Hotel Marquette, St. Louis, Sept. 14-16, and much important business transacted.

Dr. Moore, director of the St. Louis Botanical Garden, welcomed the visitors.

W. N. Craig, of Boston, in his report of the Quarantine Committee, announced that a committee of country estate owners had been organized to support the association in its attempt to secure modifications of the Federal Horticultural Board's drastic rulings. The work of the committee was endorsed and the committee authorized to proceed in its labors. Those present took the stand that as Americans they stood for all things American, although with safety first in all that concerns the country.

It was voted to start a countrywide propaganda to create public sentiment against signboards and to interest national advertisers in the matter so as to keep them from desecrating the highways.

In the course of the convention a reception and a largely attended banquet was held. The delegates visited the floral display houses of the Botanical Garden, and on Thursday listened to an address by J. Horace McFarland

of Harrisburg, Pa., who was the association's luncheon guest. Many of the fine estates around St. Louis as well as the Park System were visited, and on Thursday evening there was a barbecue at Forrest Park.

On Wednesday, the following officers were elected: President, W. N. Craig, Faulkner Farm, Brookline, Mass.; Vice-president, George H. Pring, St. Louis, Mo.; Treasurer, Peter Duff, Orange, N. J.; M. C. Ebel, Madison, N. J. was reelected Secretary.

BOSTON

Patrick Welch has returned from his summer spent at Old Orchard, Maine, looking very fit. He says that he had a splendid vacation and is in fine shape for a hard season's work.

The first meeting of the Gardeners' and Florists' Club of Boston for the season will be held at Horticultural Hall, Tuesday evening, Sept. 21.

There was an excellent exhibition of flowers at the Waltham Fair, and several florists in that section took a prominent part, among them being E. Allen Peirce and Frank Edgar. Henry Stewart also did much to make the show a success.

John K. M. L. Farquhar is expected home any day from his summer in Europe. He sailed from Havre early in the month.

After working for several years in New York, Frank Deery is again connected with Thos. F. Galvin, Inc.

ASPARAGUS PLUMOSUS, 8 inch, \$80.00 per 1,000.

VERONA FERNS, 2 1/4 inch, pot bound, fine plants, \$55.00 per 1,000, \$6.00 per 100.

SEPTEMBER 18, 1920

No. 12

THE TALK OF THE TRADE

When I heard of the severe hail-storm that struck the green-houses and truck gardeners outside of Providence, I was very much inclined to think that reports were exaggerated, but it was a mighty unpleasant trip that I made down there to look over the plants that were wrecked. From Roger Williams Park out through Auburn before I got into the greenhouse and truck gardening section, it was plainly evident that a mighty severe storm had swept through. Trees in some places were stripped bare of leaves, others, depending upon the variety, were cut in ribbons, and in the Park and along the green stretches by the sides of the avenue men were working raking up the leaves, trimming trees that had been badly broken and clearing away the debris. Block after block of dwelling houses on the west side plainly showed the effects of the storm, as probably 80 per cent of the window lights were smashed out entirely. Awnings were torn into ribbons and I knew plainly before I got out to the greenhouse section that there was little to hope for in the way of glass left standing.

I visited personally only one place, namely the Budlong Rose Company, and when I tell what happened there it will serve to tell what happened to such other places as the greenhouses of J. E. Koppleman, rose growers, Edgar L. Nock, orchid grower, who estimates his loss from \$40,000 to \$50,000, also the Potter Farm which specializes in pansies and estimate a loss of 200,000 plants and all the glass over them. Other market gardeners lost every bit of stock that was out in the fields. The big Budlong range was stripped practically bare of glass. The storm came from the west, starting at 9.45 a. m. and by 10 o'clock the work of destruction was complete. On the northern side of the houses there isn't a pane of glass left; on the south side, here and there one may find one, two or three lights scattered along. The carnation houses were stripped and broken down so that they are absolutely useless. Of course the rose plants in the houses were badly cut and broken, but they will come along again as soon as they are covered in and started up. Mr. Budlong

estimates a financial loss of \$250,000. The unfortunate part of the entire affair is that not one of the growers, either outdoors or under glass, carried any insurance.

It will take not less than 8,000 boxes of glass to cover in those houses, which he will start up as soon as he can. Every bit of glass that was available anywhere nearby in the East was immediately bought up and hustled over the road by truck, and as is usual with the Budlong Rose Co., not a minute of time was wasted. When I got there Tuesday a big force of men were already glazing and closing in the houses. House after house was covered with roofing material of all kinds and everything possible was being done to save the stock from any greater harm than is necessary.

I understand that the American Plate & Window Glass Co. have instructed several factories to go on to 16 x 24 greenhouse glass entirely and that Providence has priority shipment on all glass coming into the East. Two carloads of glass left Pittsburgh by express Monday night attached to a passenger train, and this glass with what was picked up in the East will keep the big force of men going until further stock will come in, but it is

a wicked sight to see the ruin not only under glass but in the field. One hundred and fifty acres of Mr. Budlong's vegetable crops were an entire loss. Line upon line of lima beans in frames, and acres of carrots, beets, peppers, egg plants and crops of a like nature were an entire loss.

Even the stock that was in the ground will not be fit for market as it had not reached maturity, being late vegetable crops. They were sending into the market beets and egg plants to the amount of one thousand dollars per day, and every bit of this stock is wiped out. Furthermore, an excellent crop of potatoes had been dug and were lying on top of the ground. The hail cut them up so badly that they are only fit for hog feed now.

Before this article is in the hands of our readers, however, some of the houses will be closed in. No time is being wasted and the plant will start up piece by piece just as fast as it can be covered. All the growers hit by the storm in that vicinity have the sympathy of everyone in the trade, and any help that can be offered is being cheerfully sent in from all directions.

A surprising development in the way of lilies is the latest report that the crop is going to be unusually short. This applies not only to gi-

Propagating House at A. N. Pierson's, Cromwell, Conn.

A. N. PIERSON, Inc.
CROMWELL, CONN.

... particularly to Azores and longiflorus. In many cases at the present time large sizes are entirely sold, and only small sizes are being offered.

Contrary to what everyone expected, field-grown carnations are showing up much more plentiful and prices are consequently unsteady. It would seem from present indications that some of the growers held their stock at too high a price, and now there is more

or less of a scramble to get out from under. Some varieties are in heavy supply. Of course we expected Matchless to be plentiful but there is a lot of stock of Enchantress Supreme, White Wonder, White Perfection and Beacon so any grower who hasn't fine heavy stock of his own for planting had better double up on them and buy good stock, as there is enough to go around and it will certainly pay better to start out with beds well filled and be sure of good results.

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW—before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00
LADY CAMPBELL	12.00	100.00
PRINCESS OF WALES	10.00	95.00
MARIE LOUISE	10.00	95.00
GOV. HERRICK	12.00	15.00

DAHLIA SHOW AT BOSTON

There was an excellent dahlia show at Horticultural Hall, Boston, last Saturday and Sunday, and seldom has the hall looked more attractive at these so-called small shows. This is because of the new policy of showing foliage with the flowers. There were many amateur exhibitors, but of course the most extensive displays were made by commercial growers, like J. K. Alexander and Fottler, Fiske, Rawson Co. Both of these growers had elaborate exhibits, very well staged. In addition to 700 varieties of dahlias shown, Mr. Alexander had 150 gladioli. A new colossal dahlia, crimson purple in color, called the J. K. Alexander, excited considerable comment. Thomas Murphy of Peabody, Mass., showed some excellent seedling dahlias, some of them not yet named.

Mr. John Hays Hammond was notable for his gladiolus exhibit. Albert C. Burrage, of Beverly Farms, had an interesting display of orchids, including some rare specimens from the Philippines. Arthur N. Cooley, of Pittsfield, Mass., exhibited Laelia-Cattleyas imported from England. From the Edwin S. Webster estate at Chestnut Hill, Peter Arnot, gardener, came a splendid exhibit of Celosias.

AWARDS FOR FLOWERS.

Josiah Bradlee Fund. Dahlias Show and Fancy, twelve blooms, named varieties: 1st, C. Louis Alling; 2d, S. R. Loker. Cactus Twelve blooms, named varieties: 1st, C. Louis Alling; 2d, Alfred E. Doty. Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1879.

We heard recently of a prominent nurseryman who had accumulated a large stock of *Diervilla florida venusta* for which he could not find a market. He has threatened to dig out a large proportion of them and throw them on the rubbish pile. This is one instance of the conditions which lead nurserymen to say oftentimes that it is impossible for them to go in heavily on novelties because they cannot get their money back, owing to the lack of interest on the part of the public. *Diervilla florida venusta* is one of the handsomest Weigelas that grows. It has been recommended for several years by the Arnold Arboretum, and always attracts attention when in flower there. Yet the public ignores it and goes right on buying the older but inferior kinds.

Obviously some of the strictures to which the nurserymen have been subjected on the part of advanced garden makers who are always on the lookout for new things have not been entirely warranted. It is true that a certain number of buyers welcome novelties, and give credit to the nurserymen who produce them; but this number is very limited compared with the great mass of people who keep the nurserymen going from year to year.

Now it is a question whether some sort of plan could not be devised by which nurserymen having a surplus of any kind of novelty might bring it to the attention of the public in such a way as to awaken interest in it. It would seem as though the Nurserymen's Association might help in this matter. Suppose that each member of the association should report to the secretary that he had a certain number of plants not commonly known for which he had not been able to find a market. Possibly the secretary might find buyers among other nurserymen so that the stock would be fairly well distributed, and then start an advertising campaign which would emphasize especially the value of these particular offerings. Articles about them, with photographs, might easily be given a place in different publications. If certain definite novelties are brought before the buying public in such a way as to arouse its curiosity or cupidity, sales are certain to result.

It may be argued that the returns will not be enough

to warrant this special effort and expenditures, but isn't it true that a campaign of this kind would be of lasting value in educating the public so that it would accept new things more readily in the future. At any rate, any advertising of this kind is certain to be of value in the long run, for it is the kind of publicity which excites interest and comment. As conditions are now, some kind of effort is necessary to bring about a closer relationship between the buying public and the nurserymen in such a way as to encourage the latter to accumulate stocks of the most worthwhile new plants which are available. It would seem as though the nurserymen's association might serve as a kind of clearing house in this respect.

If flower shows were intended only for scientific purposes, and were expected to be attended only by experts and experienced growers,

it might be well enough to arrange the blooms in bottles in long rows on bare tables, without any attempt at decorative effects. The fact is, though, that flower shows as a rule are aimed to give pleasure and satisfaction to the general public, including a large number of amateurs who know little about the technical end of the undertaking, but who find real joy in beautiful flowers and growing plants. That being the case, it has been obvious enough that a flower show ought to be staged in such a way as to make a favorable impression upon the senses. With this point in mind, it is possible to have an exhibit which shall receive the applause of the multitude (and they must be considered) and yet serve the interests of professional growers and the expert amateur.

In the past many of the shows, especially those devoted to such flowers as the peony and the dahlia, have been very drab in their general effect. Those in charge of the shows at Horticultural Hall, in Boston, have decided upon a new policy, and the effect was most marked at the dahlia show last week. On that occasion, practically all of the dahlias were arranged with their own foliage. That is, each flower instead of being displayed alone was set off by a background of leaves. This experiment was exceedingly satisfactory. The whole appearance of the hall was altered, and while much praise of the arrangement was heard, not a word was offered in criticism. There seems to be no reason why this experiment should not be carried still further. It is not at all difficult to arrange a background for extensive exhibits which will double their decorative value. Gardeners are still talking about the exhibit made some months ago by Mr. Butterworth, of Framingham, when he exhibited a large number of orchids arranged against a background of evergreen boughs. It is to be hoped that this plan of using the shows not merely to exhibit specimens but to create an atmosphere of floral beauty will be continued. The results so far justify all that has been done in this direction.

Florists everywhere extend their sympathy to the victims of the recent hailstorm in and around Providence, R. I. It would seem as though the elements have been on the rampage

all over the country this year. Only a few weeks ago a hurricane did a tremendous amount of damage in Central New York, houses and barns being hurled to the ground and smashed to bits like so many egg shells. There have been hailstorms in the South and the West, and now comes a particularly severe storm in southern New England. The moral of it all seems to be that it is a mistake not to carry at least a certain amount of hail insurance. To be sure, it may not be needed, but when a storm does come, it is a great satisfaction to have your losses made good.

Flowers Under Glass

This is a good time to be preparing the soil for use on the benches the coming season. If you are wise you have had the compost ready for some time, but it should be turned over and kept well broken up. The only way to get the ingredients properly mixed is to have them chopped finely. When adding bone meal or tankage to the compost, you will find about 50 pounds to a yard of soil the right proportion. You need a compost which will heat enough to kill the larvae of insects that might do damage later on.

Field-grown hydrangeas should be lifted about the middle of the month. It is a mistake often made to lift them too early, before the wood has properly matured, but of course the time for doing the work varies with the location and climatic conditions. As soon as the plants have been potted up, give them a good watering and place them in an open situation out doors until the weather gets dangerously cold. You can rest hydrangeas to advantage in a good cool cellar, but must be sure the frost does not reach them, and they must not be allowed to become bone dry, which means that you will need to look at them every two or three weeks.

The best way to get good sweet peas for winter market is to grow them in solid beds, although benches are often used. With the solid beds the plants get a deeper root, and the roots are kept cooler and more moist than when raised benches are used. It takes a lot of feeding and watering to keep bench peas growing properly for a long season. You can get good results with sweet peas by trenching the beds 12 to 18 inches deep, working in a good supply of well decayed cow manure. Don't make the mistake of sowing the seed too thickly, for otherwise you will have to do a lot of unnecessary thinning. Have your plants stand two or three inches apart in the rows. While planting directly in the rows is a common plan, some growers prefer to use flats filled with sand or fine loam and transplant the seedlings.

If you find it of advantage to use

bone meal on your rose benches apply it in the fall and early winter. Although it is a first-class plant food, it is not very rapid in action, particularly if you use the coarser grades, and the roses will not get as much benefit from it as they should if it is applied too late. It is a good plan to put it on just before you apply a mulch, as it will mix well with the manure and will be ready for the roots when they need it.

It is not too soon to begin using liquid manure in early planted rose houses where heavy cutting has been done. Only good cow manure should be used, however, and be sure that the houses are well wet down before it is applied. It is always a good plan to put on clear water first and follow it with liquid manure. Of course you will watch your plants carefully and if they show any signs of becoming soft you will stop using the liquid manure at once, withholding it until the plants are in a condition to use it again.

This is the proper time to lift and pot up Canterbury Bells from the field. You will find seven inch and eight inch pots about right for most plants, but extra large specimens will need eight inch or ten inch pots. Use a good compost and keep the plants out of doors in a sunny place until frosts come, when you should put them on a bed of ashes in a cold frame. Even then they will stand some exposure to the weather, for a few degrees of frost will do them no harm. During the winter they can be buried in dry leaves in the frames, but can be started in a gentle heat for spring blooming any time after the middle of December. Campanula medium has long been an excellent flowering plant for florists, especially those in the small towns.

George Watson's Corner

"You in your small corner and me in mine."

Frank A. Ross had a birthday on the 8th inst., and the Inquirer complimented him by putting his picture in the paper. We join our contemporary in wishing him many happy returns. We never thought Frank had so big a forehead; but he laughed at our remark, and said, "Go to —! The camera don't lie."

Howard M. Earl of the Jerome B. Rice Co. was at Hamlin, N. Y. on the 6th inst. en route for Detroit. He expects to be in Philadelphia again about the 20th inst.

There's Jersey beetles around! Ergo-Jersey must be quarantined. All business must stop. Fruit and vegetables and flowers and all other delectable products of bounteous Mother Nature must go to waste—because we are fighting the beetle. Quarantine. That's the only cry! Even fighting the Germans wasn't quite so serious. We could still go on sowing and cultivating; harvesting and marketing—in fact we had to—to keep the boys at the front in fighting trim. But beetles and gypsy moths and things like that! Quarantine. That's the only cure. Talk about Bolshevism. It's not half as crazy as this quarantine craze. They, the Bolsheviks, are only crazy for their own bunch. Quarantine, according to the way Washington works it, is simple lunacy—and will in time bring the country to the verge of absolute Anarchy. Common sense and moderation seems to have vanished entirely from the minds of officialdom. They are rushing to a fall. The only cure seems to be—Abolition for the present Oligarchy! It seems to be entirely independent of party control, or the voice of the people. An absolute monarchy in a democratic country!

When you meet a flower grower these early September days and ask him about roses or other flowers—you ask him what he's growing, and so on. All you get out of him is a dissertation on coal. My Lord! What are we going to do about coal. The getting of it. Awful! The price of it. Worse! Coal. Nothing but coal, coal, coal. However, the fever will pass in a month or two, as it always has, and then we'll get some sense out of him

besides his "saying it with coal." Very unpoetic!

Speaking, however, in a more serious vein about the coal situation, here is an interesting clipping from a daily paper which covers a phase of the situation we seldom hear of and which is worth thinking over:

"It is to be hoped that the Government will take prompt notice of the fact brought out by the disgruntled mine workers that the anthracite operators raised the price of coal on April 1 in anticipation of the recent raise in wages, and that they will have, after paying the wage award, about \$22,000,000 in surplus profits.

SAID WITH FLOWERS

By Mrs. Lion Roberts

Lewis Benton stretched himself with a weary sigh and ran his hand through his curly brown hair. He looked with tired satisfaction at the pile of papers on his desk, in his gray eyes the contented light of work well done.

"It's been a hard week," he muttered, "but I've caught up again now. Well, it's Saturday afternoon and I guess I'll take a holiday. I told Bella I'd sure be home early today and take the children out, but I guess I'll call it off."

In the theatre, crowded with people enjoying their half-holiday, Lewis watched and laughed and forgot his business worries.

"That's a pretty thing," he murmured as a quartet of flower-laden girls tripped on to the stage.

"They can sing," he thought as their sweet young voices sang the old-time melodies, while the quaint hoopskirts festooned with flowers swayed back and forth in sedate minuets and graceful waltzes.

At the hearty encore they smilingly returned, bringing large flower-filled baskets on their arms, tossing roses on the stage as they sang a tender little love song:

"The rose will tell that you love her dearly,

The violets that you love sincerely,

The lily speaks of devotion

With love as deep as the ocean—

Each little flower will tell that you love her."

Over and over, as the quartet glided away, came the chorus, first loudly and then softly and hauntingly:

"Say it with flowers, the fairest that grow—

They'll bear a message from you.

Say it with flowers—

Tulips, carnations and violets, too—

Say it with flowers."

The lights and people faded away and suddenly Lewis saw again the square hall of the big, old church in the little town of his boyhood, on a drowsy Sunday morning. He saw himself standing at the foot of the stairs waiting for Bella. She came down slowly, her fair hair shining in

taken from the consumers' pockets. Are they to be allowed to keep it?

The Dreer windows on Chestnut street have been very interesting the past week with a fine display of outdoor flowers, twenty-five or thirty big vases, every day, all accurately and distinctly named—so that the passer-

by receives a lot of valuable, interesting information, otherwise not easily attainable. Delphinium, Helianthus, Helenium, Eupatorium, Veronica, Solidago and many other families, are represented in several varieties of each. Conspicuous in the display are the blue and rose perennial asters, (Nova Anglaecoruleum and roseum).

the noontime sun, her blue eyes sweetly serious as she listened to the white-haired lady at her side.

When they reached Lewis the little old lady shook a playful finger at him as she twinkled, "Did you hear that sermon, young man? Don't wait until people are dead to bring them flowers. Your sweetheart will need them all her life; flowers of tenderness and kindness as well as roses that match her cheeks and forget-me-nots to match her eyes." Then she had chuckled at the young man's embarrassed face and the young girl's blushes as she walked away.

"Say it with flowers." How long had it been since he had brought Bella any of her beloved carnations? How long since he had heard her delighted cries as she buried her face in heart-refreshing roses?

Lewis sighed and came back to the present. He had lost his taste for the show and glanced idly around him. He saw women in furs with big bunches of violets, girls in silk with arbutus tucked in their coats, women with white hands and flashing jewels, girls with sparkling eyes and rosy cheeks.

"Bella is as pretty as any of them," he thought with pride. "In spite of her hard work she has kept her hands white and her hair lovely and when she's dressed up she looks good enough to go anywhere."

"Say it with flowers." Lewis stirred restlessly as he thought of his desertion that afternoon, the many nights that business had kept him working late and the Sundays he had been called away, leaving lonely hours for his wife and the children.

"Say it with flowers,"

"Yes, I will," he said half aloud as he rose and left the building. Straight to his former favorite florist he hurried, his quick, decided step ringing on the pavement as if he was going to meet his sweetheart. He picked out a dozen carnations, pure white and rose-pink, her old favorites as he remembered tenderly.

He ran up the steps whistling cheerily and let himself in, calling his wife's name boyishly.

"Oh, you're home nice and early." cried Bella in pleased surprise as she hurried to greet him.

Lewis waited until she was almost in front of him and then brought the flowers from behind his back.

"Lewis, dear!" Bella exclaimed with shining eyes and radiant face. "What a treat! I haven't seen anything so lovely for years."

The tears came to her eyes as she threw her arm around her husband's neck, and he began to realize how

starved for the little ways of love she had been.

"They are coming home with me every week after this, dear," he said gently. I've been a selfish old grind and haven't half shown you how I've appreciated your work and sacrifices. We're going out together too; things don't have the right flavor when I go alone. We'll take the kiddies off for good times every little while, and have some parties at home and be a regular family from now on."

"Oh, yes!" said Bella half laughing and half crying as she buried her face in the cool sweet blossoms, "I'm the most fortunate woman to have you!"

"Humph!" said Lewis as he swung the children up to his shoulders where they shrieked and giggled with glee. "I'm not so sure about that, but I know what it means to me to have you. I don't know how to tell you, so I guess I'll have to 'say it with flowers.'"—*Boston Post.*

ROBS FLORIST WHILE HE FILLS HER ORDER

While Theodore Antos, a florist, of 2980-A Boulevard, Jersey City, was picking out an assortment of American Beauties for a blonde lady, aged about 25, with bobbed hair and a beauty spot on her left cheek, the young lady helped herself to a \$70 fifteen-jewel hunting-case Waltham gold watch which was in the florist's coat hanging on the wall.—Hudson, N. J. Observer.

The Williams Flower Store at Pittsburgh has been formed into a corporation under the laws of the state of Pennsylvania with a paid in capital of \$40,000.00. The officers of the company are:—President, Harvey C. Sheaff, Secretary and treasurer, Em Brunner; Directors, Frank E. Hehman, Charles G. Ulmer, and the president and the secretary. The public notices of the new company formation have just been sent out. The date of incorporation was Aug. 18th.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 1,000 text engravings. 500 Collaborators. Approximately 1,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement in to one set of books. It is both an Encyclopedia and a Manual.

A FEW OF THE MANY IMPORTANT NEW FEATURES

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees Mature Trees and Odd Methods of Pruning and Training. Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely Illustrated. 100 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN

Through a clerical error, the date of the meeting of the Publicity Committee in Indianapolis was stated to be October 12th. The meeting will take place on Monday, October 11th.

The city of Cleveland will, officially, "Say it with Flowers," at the opening of its magnificent new Auditorium on March 25th, 1922, arrangements having been completed for opening the building with the Fifth National Flower Show, which will be in progress from March 25th to April 1st in that year.

Last week we reported a subscription of \$50 to our fund from Bees Ltd., of Liverpool, England. In making this subscription, Mr. Horton, of the firm, says, "We have had the pleasure of executing a large number of telegraph orders in behalf of United States florists, and are confident that much of this business is the outcome of your publicity campaign. If you have time to read the English horticultural press, you may have noticed that I am interesting myself in a national publicity campaign to promote the increased consumption of flowers, and the British Chamber of Horticulture, in conference with delegates from associated bodies has approved the idea, and I am now engaged in preparing one or two draft schemes to lay before the executive. It occurs to me that as we shall use slogans for flowers, fruits and vegetables, it would add immensely to the forcefulness of the advertising if one slogan was used for each throughout all English speaking communities. Please ask your executive if they see any reason why "Say it with Flowers" should not be the slogan for flowers here as well as in the United States, and whether they do not think that United States florists stand to gain and not to lose by its use in a campaign on this side. Traveling Americans would see your slogan emblazoned over here, and traveling Britishers and overseas cousins would all help to spread the phrase. Between us we could make "Say it with Flowers" a spontaneous expression wherever English is spoken." In a postscript, Mr. Horton mentioned that the sum he had promised for the commencement of the British campaign was \$500, with an additional \$500 if any firm would make a like contribution. And yet there are many florists on this side of the water who

F. T. D. ASSOCIATION BIG BROTHER MOVEMENT

Have you been interested in the nation-wide work of the Big Brother Movement helping to lift up and look after the interest of those who need aid? Many of you have undoubtedly received wonderful satisfaction from the results obtained, and the pleasure, —money couldn't buy.

Well, doesn't the work of the F. T. D. from its earliest inception to the present day strike you as the best parable possible? From the very beginning when only a handful could see its merit and when it builded on foundations strong enough to carry on under present day methods with its added weight and modern machinery, we are still able to add to our structure without its foundation having to be reinforced, and that's going some.

What has the florist to gain by joining our ranks? That old-time question has been asked so often by florists who have lost their reasoning powers, or else every reliable shop that retails flowers would have been enrolled as an F. T. D. member. If you are a member come to Indianapolis, October 12th and 13th. If you are not a member come and see what you have been missing. Join the big brother movement and tie-up to the F. T. D. principles and you will have done the best thing for your own purpose that you have done for a long while.

Our association has been behind every movement of progress and will continue to do so, and by giving your support to the various functions which our committees are interested in, you will directly benefit yourself.

There are so many benefits to be derived that it would take days to explain. But, best of all, go to the convention and you will come away with the satisfaction of having spent two days that will be the best paying dividend you ever received.

Many florists get an order now and then, who do not belong to the F. T. D.

New Violet "Duchess"

This is a great improvement on Princess of Wales—Deeper Shade and more uniform, also a much better and surer producer and better keeper and shipper, also more fragrant. General appearance when bunched away ahead of other varieties. Exceptionally easy to propagate. Should be planted in the beds earlier than Princess.

It will pay you to go in for DUCHESS. And DO IT NOW before this fine lot is all grabbed up. We offer Large field grown clumps of DUCHESS, and the other two as follows:

	100	1000
DUCHESS	\$15.00	\$120.00

W. D. HOWARD

150 South Main St., Milford, Mass.

feeling that membership is unnecessary, and am somewhat reminded of the old-time story where a small store-keeper put up in his window an elaborate new blind. Quoth his neighbor "Nice blind of yours Isaac." "Yes," was the reply. "Who paid for it, Isaac?" "The customers paid." "What! You say the customers paid for it Isaac?" "Yes, I put a leedle box on my counter and labeled it "For the Blind," and they paid for it."

So with many who are not F. T. D. members, they get a few orders now and then but overlook the many that would come their way were they properly enrolled.

HENRY PENN

MR. FARQUHAR'S VIEWS OF CONDITIONS ABROAD

Mr. John Farquhar of Boston has just returned from a lengthy trip to Europe. He says that he found horticultural conditions in England and France very much better than anybody could ever have expected. The outlook in England is particularly bright, there being a large demand for horticultural material of all kinds. Mr. Farquhar said that the seedsmen of France were very rapidly recovering their oldtime business position and that in fact the extent to which they have regained their trade is astonishing.

The greatest blow to horticultural shippers according to Mr. Farquhar has come in the action of the Federal Horticultural Board of Washington barring out a great many plants and bulbs. Growers in some cases have been almost ruined. The Dutch bulb growers Mr. Farquhar said had rather over-reached themselves. They sold about half their crop at jobbers' prices; the other half will have to be dumped on the market and probably will result in disposing of them at auction sales in New York.

THE MARKET

Yom Kippur had a marked effect on the market last week, all the Jewish salesmen being out on Wednesday, and many of the flower stores being closed. The disaster which overtook Budlong, the rose grower, of Rhode Island, has also been reflected in the Eastern markets. Budlong shipments were so great that he could practically control the price. With these shipments out and likely to remain out until the first of the year, there is a shortage of roses which has resulted in an increase in price by other shippers all along the line. The market in general has been fair. Carnations, although poor, are selling at

No. 13

THE TALK OF THE TRADE

I think that Houghton-Gorney, of Boston, make friends with the attractive little cards which they enclose with the flowers they deliver. The card has an attractive violet border, and at the top the excellent trade mark which has been adopted by this concern, showing the notable spire of the Park Street church, on the ground floor of which the store is located. The message on the card reads as follows:

"Our way of showing appreciation of an order is not merely thanking the customer, but trying to fill the order better than was expected.

"We are always careful to check over and inspect every order before shipping, but regardless of the fact that we are operating the best inspection system we can invent, errors will occur in a business which handles hundreds of orders daily, as we do.

"We therefore suggest that you examine these flowers as soon as received and make sure they are satisfactory. If not, notify us at once, as we desire every recipient of Houghton-Gorney flowers to be a little more than satisfied.

"It is this desire to serve that has built our business."

I noticed in the New York market last week some very fine stock of Chrysanthemums, Golden Glow and

Early Frost. They were particularly well done, and the stock was bringing good prices for this time of the year, \$3 being probably the top notch, but real good stock would go easily \$2.50.

What would anyone have thought ten years ago if valley had gone to \$15 and \$18 per 100 wholesale, and now we find day after day valley selling in the wholesale market from \$20 to \$25 per 100 and it is by no means fancy stock. The time is probably not far distant when there will be a better supply coming in from abroad and then the price will come down a bit, although it will never get anywhere near the prices that prevailed in former years.

I find that rose growers in and around New York are doing pretty well with the variety Frank Dunlop. I have predicted from time to time that this rose would make good and I feel now that it has, even if it is early in the season. I haven't found a grower yet who hasn't been able to make it step right along in a lively way. The flowers are of fine size and color particularly for this time of the year. Crusader also seems to be doing very well. It is a good grower and has good size for so early in the season. With such roses as Premier, Columbia, Dunlop and Crusader, we have a fancy strain that works in finely with the other older varieties, and to this list may be added Madam Butterfly. Although it is a trifle early yet to judge fairly, I believe this is going to be a standard sort and has a fine chance of displacing Ophelia. It certainly is a fine grower and that will count a lot.

It is very easy to put off from week to week the propagating of roses, but it is by no means too early to start on this work right now. I know of one grower who started the past week and is going to keep at it just as heavy as he can, believing that there is going to be a heavy call for stock. Of course it will be quite heavy on own roots stock on account of difficulties in securing manetti from abroad and the uncertainty of getting shipments in. The call for Premier, Columbia and Dunlop in particular is sure to be very heavy, and many growers have found that these varieties are apparently as

strong on their own roots as on grafted stock.

Changes in the lily situation follow thick and fast, and with the information that all stocks will be in short supply comes the natural tendency to increase the call for cold storage stock. There is very little cold storage stock offered excepting 7/9 size at this time, at least that size is the bulk of the order, but with the shorter quantity of formosums, Azores and multiflorums coming in, the natural consequence is an increased value on cold storage liles. During the early summer there was very little profit in cold storage stock, but now they are coming along with a natural good quality and increased percentage of blooms, and the call is also increasing. That means better results for everyone in every way.

Speaking of bulb stock I am reminded again of the continuous change in the market on paper whites. They are making a steady incline, and anyone who has not bought all that is needed will find higher prices prevailing from day to day, and that means buy at once if you are going to need them.

Regarding Dutch bulbs, there seems to be a tendency among the Hollanders to send in very near to what has actu-

W. N. CRAIG

Newly Elected President of the National Association of Gardeners.

F. R. PIERSON

Re-elected President of the New York Federation of Horticultural Societies and Floral Clubs.

ally been sold or contracted for. Surplus stocks are not particularly in evidence. I believe, however, as I have said several times before, that Dutch bulbs will not go to the very high prices which were originally quoted, but there is not the same chance for gambling on them as originally appeared. It isn't too late now to order; there will be plenty of stock to go around, but I don't think you had better wait until very late and depend upon a surplus which you may have thought could be picked up at a very low price.

Stocks of Baby Rambler roses from the field, two and three years old, are short, but on the contrary the climbers such as Crimson Rambler, Dorothy Perkins and Tausendschoen are in fairly good supply. I mention this because it is a crop which the grower will have on his mind at this time. If you need Baby Ramblers and can find them, it will pay you to make sure of them now.

As to other pot plants from the field for fall delivery, I would again mention hydrangeas, both French and Otaksa. For a time there seemed to be an over supply, but lately I find that stocks are shortening up, and while there probably are enough to go around, all fear of a surplus seems to be eliminated. I am glad to say, however, that the quality of field grown hydrangeas offered is of the very best, and the stock is of exceptionally good value at prices quoted.

Through the New England section of the country in particular, pansy seedlings have been short, mostly due to heavy losses in the seed beds. This also applies to *Bellis perennis* and *Myosotis*, consequently anyone having a surplus of any of this stock will find a ready sale for it.

MONARDA FISTULOSA MENTHAE-FOLIA

Among the American wild flowers now in blossom at Hillcrest Gardens is the *Monarda fistulosa menthaefolia* which grows in Glacier Park, while the plants in our garden were brought to us by a friend from Illinois.

It grows from three to four feet high in thick clumps, so that it can be easily propagated from the roots. The shrub or plant branches out a foot or more above the root. The lanceolate foliage is dark rich green, the midrib and veining showing distinctly in a lighter shade.

The lovely lavender blossom is more compact than that of the *Monarda*

didyma, having the pincushion effect of the common pink clover. There is a soft velvety pubescence to the petals which with the long filaments give the blossom a delicacy in its growth and exquisite color which is lacking in the bee balm or didyma. We have had two plantings of *Monarda didyma* this season; one in the open sunlight we are going to take out, the other was on our wood road where its red color contrasted well with the green trees and the trunk of the white canoe birch

just behind it. So much of the beauty of a flower depends upon where it is placed.

M. R. CASE.

Hillcrest Gardens, Weston,
August 23, 1920.

The Parkhill Flower Shop, of Manchester, Ct., have installed two large refrigerating boxes at the South Main Street Greenhouses, adding not a little to the capacity of the store.

A. N. PIERSON, Inc.
CROMWELL, CONN.

ROSE MIDGE

One of our correspondents has trouble with the rose midge, and asks us what to do about it. We have looked up authorities and here is what they say about it:—

"The maggots becomes full grown in 5 to 7 days then leave the rose buds and complete their transformation in the soil. Fumigation with hydro-cyanic acid is of value for killing the flies before egg laying; best time is March—does not give such good results in summer. Watch plants carefully and pick off all infected parts. Rotate with other crops, if that be possible and get new plants from districts not infected."

The maggot is microscopic and is recognized first by its effect; the midge lays its eggs beneath the sepals of the flower bud, or between the folded leaves of the leaf-bud; hatches in 2 days; begins to eat, and then in 5 to 7 days, drops to the soil, and becomes another midge. The work of the maggot does not affect the growth of the plant; but the buds fail to develop, so that overgrown plants that fail to flower are evidence of the presence of the maggots. Very serious pest and no precaution too much—even to removing all plants and soil for a season, and growing other crops.

NASSAU COUNTY SOCIETY

The monthly meeting of the Nassau County Horticultural Society was held on Sept. 9th in Pembroke Hall, Glen Cove. Thos. Twigg presided, and F. Faulkner, C. O. Geissler, D. Watson, G. G. Collings and S. Dutton were elected active members. Five petitions for active membership were received at this meeting. Frank O. Johnson received 1st for 3 sticks of Celery, Joe Boler received 1st for one outdoor melon, Frank O. Johnson received the thanks of the Society for a plant of Cyp. Rosettii. Messrs Noonan, Barlow and Wickie did the judging. The schedule of the main show was read and the date set for Oct. 28-29 in Pembroke Hall. The Dahlia Show will be held on Sept. 30 and Oct. 1st in Pembroke Hall. There are sixty four classes in the schedule and the show should be a record breaker. John F. Johnston and Wm. Carter received the heartiest good wishes of the Society, both gentlemen plan to cross the pond in the near future. Exhibits for the October meeting will be 6 onions, 25 pods of peas and 3 heads of cauliflower.

THE BLUE LACE FLOWER

Dear Sir:—M. R. Case is somewhat incorrect in referring to the above as a new flower bred from one coming originally from Europe. Although related to the Carrot Daucus this plant is of Australian origin like all other members of the family. Formerly known as *Didiscus Coerulea*, it is now known as *Trachymene Coerulea*, an annual introduced into Europe in 1827.

The other members of the family are all tender evergreen plants. The botanists, however, have grouped four of the five other species in the genus

Sieberia, two of them white, the other two yellow. The remaining species, *T. pilosa* is blue.

T. A. W.

Philip J. Lucking, who has been gardener for C. K. G. Billings on his Oyster Bay estate, has transferred to Mr. Billings' estate at Santa Barbara, Cal.

R. Vincent, Jr., & Sons Co., will have their annual dahlia exhibit September 29th and 30th. This show always attracts a great many visitors and is well worth seeing.

SUBSCRIPTION RATES:

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

The views promulgated by Mr. D. L. MacIntosh, the well known horticulturist of Stillwater, Minn., in a recent number of *Parks and Recreations*, may well be given consideration by those in charge of the public grounds in other parts of the country. Mr. MacIntosh points out that the average park fails to live up to its opportunities in being of service to the people who are interested in trees and other plants. He calls attention to the fact that very few parks have their trees labeled, and that in most of them the employees can give little or no information about the contents of the flower beds.

Now a nice bed of flowers of any kind is a delight, and so is a clump of shrubs or group of trees, adding to the landscape; and perhaps nothing more is needed for motorists driving by at the rate of twenty miles an hour, but the man or woman who goes into the park for real enjoyment and information finds the whole thing a failure. Why? Because no attempt is made in many instances to give any information as to the name or character of the plants which are seen. Now-a-days when interest in horticultural matters is keen, people want this sort of information. If they see a tree or shrub which attracts their eye, they wish to learn its name and also if it can be grown in a private garden. The time is coming when a more united effort must be made to meet this want.

Some superintendents say that they have no time to bother with the labeling of plants. These men are back numbers. The successful park of the future will give just as much information to visitors as does the Arnold Arboretum, with its carefully labeled trees and shrubs. For that matter, the time is coming when more labeling will be done on private estates, especially as there is a decided tendency to try out the new offerings of the nurseries.

Mr. MacIntosh tells of a man in charge of a large private place whose laborers formerly knew little about the plants they worked with. This man started the employees to printing labels on wet, cold days when they could not work outside. They did not always make a good job at first, but in a short time became more proficient, and when spring came had replaced all broken labels and staked all new plantations. Now when the owner takes his friends around, he does not have to ask the gardener what this or that plant is; he can read for himself.

This same practice can be carried out in the public parks. Too often, as it happens now, if you ask any employee about a specimen or a bed, you will not get a

satisfactory answer, and in some cases even a civil answer. This sort of thing is to be regretted, and must be changed, but according to Mr. MacIntosh,—and we think he is right,—it is rather typical at present of a great number of our parks, from the Atlantic to the Pacific, and from the frozen North to the sunny South.

The elevation of W. N. Craig to the presidency of the National Association of Gardeners is a well deserved honor. Mr. Craig, who was superintendent of Faulkner Farm, Brookline, and has been for many years secretary of the Gardeners' and Florists' Club, of Boston, is widely known, not only in New England but throughout the country. In fact, it is doubtful if any member of the association has a wider acquaintanceship. Mr. Craig is known not only as a master gardener of long experience and much ability, but also as a lucid and entertaining writer, and a forceful, interesting lecturer. He has had a prominent place in leading the fight against the quarantine No. 37, and has presented many powerful arguments against this measure. As president of the National Association he may be expected to do much for the benefit of the fraternity of gardeners, especially in the way of bringing a greater unity of interest between gardeners and their employers. *HORTICULTURE* congratulates the National Gardeners' Association on its choice of a new executive.

In spite of high prices, all has not been smooth sailing for the florists throughout the country. Ever since the war there have been increasing difficulties to complicate business conditions. Perhaps there is no better indication of this fact than the situation at the Flower Exchange in Boston.

Years ago, before the great struggle across the water began, every stall in the market was taken; in fact there often was brisk bidding for stalls, and at times a waiting list seemed likely to be created. Now look at the situation. At the present time there are 15 vacant stalls, and if rumors are true a number of others will be vacant before many weeks. It will not be surprising if the beginning of the year sees 25 empty stalls in this market. It is certain that a number of greenhouses in New England will close down. To be sure they are mostly those doing a comparatively small business, but in the aggregate their amount of shipments are considerable. Moreover, they help to lend competition to the trade. These establishments will have to be closed down for two reasons, the most pressing one being the lack of coal. While most of the big growers have been able to get what coal they need at a long price, many of the smaller growers, especially in the more remote towns have been unable to get their orders filled or have not been able to finance so big an undertaking. As a result they have no coal and no prospects of getting any.

The second reason and almost of as much importance is the high cost of labor. Farmers and market gardeners say that labor is more plentiful and that wages are lower, but this sort of thing has not been felt in the flower industry. The reason is no doubt that skilled labor is required for much of the work, especially on the smaller places. This kind of labor is almost out of the market. Possibly with the coming of winter there will be a greater offering of labor, but the outlook now does not point that way. No doubt the situation as it exists in New England is the same in many parts of the country; therefore, while the big grower can say that business is good and that the outlook is favorable, the small grower is getting pinched between the upper and the nether millstone of high-priced labor and profiteering capitalists.

Under the Park Street Church

Flowers Under Glass

Violets must be given regular attention, although they do not like artificial heat, so that the fire should not be started up any earlier than necessary, say about the middle of October. Of course you will keep all weeds, runners and spotted foliage removed. Perhaps you have the plants on raised benches, in which case do not let rubbish accumulate underneath them. This is a common practice, but a poor one. Neatness and cleanliness are almost as important in a violet house as careful watering and proper ventilation. The ventilators should be kept open as a rule until fire heat is started. The one thing which takes expert treatment is the use of water, for if the plants are deprived of what they need, they will not thrive, and they will suffer if the soil is kept saturated.

Probably you have noticed that the Lorraine begonias are growing very fast now. They always begin to make rapid growth as soon as the nights grow cooler. From now on they will need a house where there is fire heat at night, and careful attention must be paid to ventilation. Have your strongest plants established in six-inch pots or pans, and stake up the new growth without delay.

There is much question about the proper feeding of chrysanthemums. Some growers place much faith in commercial fertilizers, while others prefer cow or sheep manure. Of course, the big growers have figured out their formulas carefully, but the small grower can get along very well by using natural fertilizer, at the rate of a bushel to a barrel. Allow it to stand for a couple of days, after which the water can be drawn off and the barrel filled again. If you prefer to use chemicals, such as nitrate of soda, potash and sulphated ammonia, use any one of them at the rate of a four-inch pot full to a fifty-gallon barrel of water. Be sure that the crystals are all properly dissolved before the liquid is applied.

If you are preparing manure for mulching the rose beds, be sure that it is turned over every week, but do not add too much soil yet. In fact, if you can get any good coarse sod, that would be preferable to soil. It is not wise to add bone meal or any other commercial fertilizer to the manure, for there will be much waste and but little gain. It is even more of a mistake

to add lime, for that would release the ammonia and decrease the value of the manure. If you do not have a shed or other covered building in which to store the manure, put a layer of good coarse sod under it, for this will take up what leaches out, and afterwards the sod can be used where a rich soil is wanted.

FLORISTS AT GALLIVAN'S

The seventh annual outing of the Holyoke and Northampton, Mass., Florists' Club took place at Gallivan's farm in Smith's Ferry. There were 100 members present and the afternoon was pleasantly passed, the feature being a clambake, followed by a ball game between Holyoke and Northampton, with Amherst players also playing with the Meadow City florists. After five innings the score was declared a tie, when it was discovered that the score-keeper was unable to keep tabs on the runners, so fast did tallies come over the home plate.

GARDINERS' & FLORISTS' CLUB OF BOSTON

The first meeting of the season was held last Tuesday evening and was very largely attended, about 150 being present. Samuel Knowles of Canton gave a very interesting talk on poultry keeping. Many attractive exhibits were made, and the following were the awards:

Chrysanthemum Golden Glow, Leominsted Floral Co., award of merit.

Collection of gladiolus seedlings, W. N. Craig, vote of thanks.

Collection of pot plants, including cyclamen and begonias, W. W. Edgar Co., vote of thanks. Chrysanthemum Early Frost, W. W. Edgar Co., honorable mention.

Collection of greenhouse roses, including New White Ophelia, Golden Ophelia, Pilgrim, Crusader and Madam Butterfly, W. H. Golby, honorable mention.

New seedling Begonia Rex, Wollrath & Sons, report of merit. New sport of Teddy, Jr., Wollrath & Sons, honorable mention.

A resolution was passed condemning the sale of Dutch bulbs at auction, as being unfair to the growers who pay large prices early in the season, and the club voted to call on other clubs to refuse to buy bulbs next season unless the Dutch Bulb Growers' Association endeavors to eliminate this unfair practice.

Corner**

"You in your small corner and me
in mine."

The gladioli meeting and exhibition in Boston was splendid and showed the most progressive and enterprising spirit. The only suggestion we can think of to offer in the way of further worlds to conquer is the thought that wouldn't it have been wonderful if the same showing could have been made simultaneously at both Boston and Cleveland. Look at the wonderful difference in the audiences. The Boston crowd—we all know what the Hub of the Universe is—especially the New England universe. But the Cleveland audience—ah, there's where the thought lies. There were the men from the backwoods, from the seashores, from the mountains, from the sandlots, from the prairies, from Florida to Alaska, and the big thing about it is—they only make it once a year! Just once a year. A long journey to see what is newest and best in the horticultural world. One year it may be Boston, another year Kansas City or Washington, but that journey they must make. So if the exhibitors are not there at the annual S. A. F. meeting the consequence is that the scholars from near and far go back home unenlightened. Some may say that they couldn't make the exhibit at both places. We think this is largely imaginary and that a little of what is now called executive efficiency would easily demonstrate a duplication of exhibits and capable hands to handle same with splendid results to all concerned.

The question of whether it was a wise thing or not for a florists club to indulge in discussions of religion or politics was after full and free expression of opinion decided that the club make a special by-law prohibiting—which was done. That was a quarter century or more ago and the wisdom of it has many times since been exemplified. Albert M. Herr is a member of the Phila. Club, and it is strange to hear of him putting the Lancaster county boys in wrong on that question.

A notable window display is what may truly be said of the latest Philip Freud creation at the Michell store on Market street. The fall bulb season is now commencing and business among the hundreds of thousands of passers-by must be stimulated. To do this

effectively a few plates of hyacinths, tulips, and narcissus bulbs, are not enough. A much more energetic appeal is necessary for the multitude, which in the mass is sadly lacking in imagination. A picture will stop a child and make it crow with delight—and in the main aggregate, people at maturity are but grown up children.

No one realizes that truth more clearly than Michell, and his unequalled artist, Philip Freud. Many fine displays have been made by them in the past, but nothing quite so original and effective as this year's layout. The background is painted scenery of true Dutch character—the foreground of the painting showing a fine array of

PITTSBURGH CUT FLOWER CO.

116-118 Seventh St., PHILADELPHIA, PA.

York city, June 15, 1920, to consider Quarantine No. 37, where 500 or more trade and amateur associations were represented. The conference resulted in an organized effort to secure a modification of the present quarantine rulings.

After discussion the following resolution was adopted and the secretary was instructed to send the same to the Federal Horticultural Board.

"The New York Federation of Horticultural Societies and Floral Clubs in annual session at the State Fair, Syracuse, New York, September 15, 1920, respectfully urge that Quarantine No. 37 be so modified that novelties in small quantities, not to exceed one hundred plants, may be imported for purposes of propagation, with soil on their roots and that they be examined and passed by the Federal agents at four ports of entry: i. e., Portland and San Francisco on the Pacific Coast and New York and Philadelphia on the Atlantic Coast, instead of being sent to Washington as now required, which almost invariably results in the loss of the entire importation, especially of soft-wooded plants."

In regard to the greenhouses for investigational purposes at Cornell University, E. A. White reviewed the meetings of the committees from the Federation which had met at the Agricultural College during the past year, and that as a result of these meetings recommendations had been embodied in the general project for the completion of the College of Agriculture. As a result of the activities of the various Agricultural and Horticultural organizations of New York State and at the request of the trustees of Cornell University, the last legislature passed a bill appropriating \$3,000,000 for the completion of the College of Agriculture. \$500,000 becomes available this year. Plans for the greenhouses are included in the general building project and the Department of Floriculture at Cornell University is now working on the development of the plans which must be completed and approved by the trustees prior to December 1, 1920.

After discussion it was voted that the following resolutions passed last year and sent to the various state

formal beds planted with all the popular spring flowers: squares, oblongs, stars, crescents, with artistic narrow borders, and appropriate scenery. The bulb display itself, is very fine, and is relieved from flatness, with flower models of each variety—almost equal except for fragrance to the real. These not only relieve the monotony of the bulb display; but they are of educative value and carry quick and lasting impressions on the passersby. A flower spike of Czar Peter hyacinth alongside the bulbs of that variety, or a bloom of the Kaizerkroon tulip in a similar position with its parent, conveys the beautiful coerulean blue, or the intense blood red in a way that no printed story could begin to touch. The general effect and the smallest detail of this wonderful showing have both been studied with equal care, and the final result is worth going a long way to see. Window artists, both locally and from other cities, are loud in their praises of this fine exhibit.

G. C. WATSON.

PRES. F. R. PIERSON RE-ELECTED

Annual Meeting of the New York Federation of Horticultural Societies and Floral Clubs

The annual meeting of the New York Federation of Horticultural Societies and Floral Clubs was held at the State Fair at Syracuse, New York, September 15, 1920. The meeting was called to order at 3 o'clock with President F. R. Pierson in the chair. In the roll-call of the Federated Societies the following were represented by delegates: New York Florists' Club, New York Horticultural Society, Tarrytown Horticultural Society, Buffalo Florists' Club, Rochester Florists' Association, Syracuse Rose Society, Syracuse Florists' Association, New York and New Jersey Association of Plant Growers, Albany Florists' Club, Western New York Floricultural Society.

President Pierson reported the results of the conference held in New

officials should be again presented to the secretary of the state fair commission, Governor Smith, the chairman of the Ways and Means Committee and the chairman of the Finance Committee of the Assembly.

"WHEREAS, New York is the leading horticultural state in the Union,

"WHEREAS, Six years ago and each year since, we have brought to the attention of the State Fair Commission the urgent need of horticultural building worthy of the extensive fruit, flower, vegetable, bee, seed and nursery stock interests of the state, and

WHEREAS, The Commission by formal resolution agreed that the first new building erected would be to properly house our exhibits, therefore, be it

RESOLVED, That we the New York State Federation of Horticultural Societies and Floral Clubs again bring the matter to the attention of the Commission asking that this building project become a reality.

The same committee consisting of Dr. Earl Bates., chairman; F. R. Pierson, Tarrytown; F. A. Danker, Albany; W. A. Adams, Buffalo; Anton Schultheis, College Point; Charles Vick, Rochester, and Arthur Cowee, Berlin, was named as a permanent committee charged with the responsibility of looking after the interests of a Horticultural Building at the New York State Fair Grounds.

E. A. White reported the organization of an amateur rose society at Skaneateles through the activities of Charles G. Adams, Auburn, N. Y. Also that Mr. Adams is very much interested in a plan for rose plantings along the state highways. The project which Mr. Adams has in mind is encouragement of rose plantings about farm homes and the introduction of the hardiest species and varieties, especially the native roses, along the state highways. A project for such plantings is already being developed on the state highway between Auburn and Skaneateles.

President F. R. Pierson invited the Federation to hold its winter meeting with the Tarrytown Horticultural Society. The date will be announced later.

The following officers were elected: President, F. R. Pierson, Tarrytown, N. Y.; first vice-president, Dr. Erl Bates, Syracuse, N. Y.; second vice-president, Charles Vick, Rochester, N. Y.; third vice-president, Anton Schultheis, College Point, N. Y.; fourth vice-president, F. A. Danker, Albany, N. Y.; fifth vice-president, W. H. Workman, Oswego, N. Y.; treasurer, W. A. Adams, Buffalo, N. Y.; secretary, E. A. White, Ithaca, N. Y.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best test by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

The Aconitums are among the plants which have bloomed especially well this season. It is a pity that they are not used more generally in everyday gardens. On large estates they are proving very effective, but they are equally valuable for the perennial border of the suburban home. While there are many different kinds, the newer *Wilsonii* is one of the most effective. Its color is good and it grows amazingly tall, often reaching far above a man's head. It is a large genus, though, and while many of them like *Wilsonii* have come from China, the larger majority are natives of Europe. European kinds should open in July, and with *Wilsonii* and *Fischerii* to extend the season through September and into October, the Aconitums are extremely valuable for filling in vacancies in the border at a time when the garden commonly be-

gins to look shabby. Probably *Aconitum napellus* is the best known. It grows five or six feet high and when used in connection with its white variety, *albus*, and possibly with *albo roseus*, which has white flowers with flesh colored edges, the effect is most striking. Use them in groups and you will get a fine addition to the garden perennials.

A. napellus bicolor and other varieties flower during August and help to keep up the display. The bicolor variety with its blue and white flowers is very attractive, and ought to be grown much more widely than is the case. It is among the most desirable of all hardy herbaceous shrubs. *A. variegatus* is also blue and white, and is a good variety, although not so effective as bicolor because the colors are not so well divided. For a very dark blue, *A. uncinatum* may be used. The kind most commonly grown in

gardens is *Spark's* variety, which is probably the same thing as *A. acutum*. With good culture this variety will grow six feet high, and throw out a great number of side branches. It is sometimes a little weak, so as to require staking, and is best for having a background of white or at least grown in proximity to white flowers. Tall white phlox or even *Shasta* daisies in the immediate vicinity help to set off the extremely dark shade of blue. In any event, it is always a plant to be used in a mass, for then it is unusually attractive. Other kinds which flower in August are *Inunctum*, *Cammarium* and *Stoerkinum*. These varieties range in color from pale blue to dark blue, and the habit of each is quite distinct. *A. Wilsonii* is a fine plant to come along in September, and so is *A. Fischerii*, which is also, and perhaps more commonly, known as *A. autumnale*. This is the last of the Aconites to flower, and when given a sunny position it grows three feet tall, with large, glossy foliage, and throws compact heads of good blue flowers. It is a remarkably good variety for the late garden, and to use on estates where the family is away during summer but returns in the fall.

The Monkshoods will thrive in almost any good garden soil, but, of course, are all the better for liberal feeding and good culture. Well decayed cow manure is the best basis for starting a good planting, and in a well made border or bed the plants will thrive nicely for several years without being replanted.

Amateurs often ask what they can grow in a semi-shaded position, and sometimes even experienced gardeners have difficulty in giving them a good list. Certainly the Aconitums can be recommended when the shade is not too dense, and on larger estates where there are woodlands or semi-wild gardens to be planted, the various species and varieties can be used with confidence because they naturalize themselves after a few years and make an exceedingly attractive display, while receiving only a minimum amount of attention.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 1,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement in to one set of books. It is both an Encyclopedia and a Manual.

A FEW OF THE MANY IMPORTANT NEW FEATURES

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely Illustrated. 400 pages. 5 1/2 x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information.

a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

NATIONAL PUBLICITY CAMPAIGN

That the Publicity Campaign is to be pushed vigorously during the year to come is assured by the action of the Publicity Committee, who are already busy with plans for publicity for flowerers during the first five months of the year. The committee derived much courage from the optimism expressed at the session of the recent Cleveland Convention devoted to a discussion of the campaign. It was there decided that any let-up in the work in progress would be a serious matter for the trade, and the committee, true to their purpose, have made specifications for contracts amounting to several thousand dollars to cover this period.

Taking into consideration the guarantees in hand to offset the expense of all this, the committee have felt justified in incurring the liabilities, and as the contracts must be made at this time if we are to have the service of the magazines when required, the order to the agency to go ahead must be given.

Contributors to the campaign fund who are not members of the S. A. F. and O. H.—and why they are not is inconceivable—would do well to write to the Secretary for a reprint of the address made before the Cleveland Convention by S. R. Latshaw, a noted expert in publicity matters. They would surely, after reading this address, become even more enthusiastic over the outcome of the campaign. Those who are not contributors would also do well to obtain a copy of this address, which is most inspiring, and presents facts in a most understandable manner.

It is singular, that nobody yet has criticised the work of the campaign adversely. Expert opinion has, thus far, been an admission that the campaign has been wonderfully successful, but condemnatory of the parsimony of the florists, in that they did not realize the prestige the campaign was creating for them to raise sufficient money to get the full benefit of their opportunity.

The slogan "Say it with Flowers" is the cynosure of all eyes in the industrial publicity world. It cannot well be perverted to the use of other industries, hence our complete enjoyment of it for our absolute use. The candy makers, jewelers and other craftsmen have tried to adapt it to their lines, but it stands unassailable, it cannot be

pirated. From time immemorial, there has been a language of flowers, and we derive our slogan from it.

A florist who does not support this campaign is dead to his own interests. It should be supported by every man who has a stake in the industry. It is one great, grand movement to increase the demand for flowers, and it operates for the advancement of florists' interests in every community, large or small. The bigger the fund, the greater the advancement. The committee want more money right now—will you deny it to them?

JOHN YOUNG, Secy.

43 West 18th Street,
New York

PROGRAM FOR F. T. D. CONVENTION

At Claypool Hotel, Indianapolis, Monday, Oct. 11, the following preliminary program will be laid before the board of directors, and additional numbers added and brought up in rotation:

Tuesday, Oct. 12, 8 to 8.45 a. m.: registration of members and visitors, Main Assembly Hall, Claypool Hotel; address by Governor Goodrich or Mayor Jewitt; response by Mr. Chas. Grakelow, Philadelphia; address, President Philip Breitmeyer; reports of treasurer, secretary and traveling representative; paper on F. T. D. work, by Mr. M. Bloy; new F. T. D. roll call introduced by Pres. Phil. Breitmeyer.

Tuesday afternoon: Paper and talk on Credit and Bookkeeping Systems, Mr. Ira W. Harper of Pittsburgh; paper, "Shall All Our Guarantee Fund Be Invested in Kansas City or shall it be Distributed, Especially in Regard to Our Canadian Brothers?" Mr. W. W. Gammage; scenic slides and lecture on floriculture in Europe by Mr. E. G. Hill of Richmond, Ind.; talk and film illustration of an up-to-date western establishment, the Hollywood Gardens of Seattle, Wash., by Dr. W. A. Moore; prices on the Pacific Coast, F. T. D. Member Seulberger, Oakland, Cal., and F. T. D. Member Borden, Los Angeles, Cal.; lecture and illustration of floral work and practical demonstration, by Mr. Max Schling.

Wednesday, October 13th: Consideration of proposed amendments to by-laws; talk on National Publicity; our stand, policies and support toward the S. A. F. publicity campaign; the National Growers' Organization and future policies, Mr. Ammann; our future relationship to retailers in foreign countries—with regards to florists in Germany, Austria and former enemy countries; election of officers; why we need three correspondents in

GREENHOUSE BUSINESS CHANGES HANDS

Ward B. Davis has purchased the greenhouses of Louis Otto, veteran florist at Neenah, Wis., and will conduct the business of that institution in connection with the one in Oshkosh. Elmer E. Ferson, who has been in the employ of Mr. Davis, will take active charge of the Neenah end of the enterprise and occupy the residence which is a part of the five-acre tract acquired. Mr. Davis also proposes to open a flower store in that city. The transaction included seven large greenhouses whose capacity exceeded by a considerable extent Mr. Davis' Oshkosh plant and will permit him to greatly enlarge his business.

NEW FLOWER SHOP IN WORCESTER

The Worcester, Mass. Post contains the following notice of the California Florist's Shop, which has been opened in that city:

At 21 Pearl street in this city, a new florist shop has just been opened. Its proprietor is Steve Vonic and he has just come from that entrancing land of flowers, California, and from

the city of Los Angeles where he and his wife made up many attractive floral designs for world-famous movie stars connected with studios in that city. Among these stars was Mary Pickford for whom Mrs. Vonic designed a bridal bouquet of white orchids and lilies-of-the-valley whose charm so appealed to the dainty movie star that she sent Mrs. Vonic a check of \$100 in addition to the regular price charged her for the bouquet. During this week Mr. Vonic expects to receive a consignment of choice orange blossoms from the Golden State.

FLORIST DOLBY TO THE RESCUE

Great Barrington, Mass.—When pole cats get religion, devout human beings must needs abstain from church. This was the case here when a skunk made a pilgrimage to the belfry of St. James Episcopal Church, where the smart set says its prayers. E. B. Dolby, a florist, and hence an expert on scents, rose to the emergency. Borrowing a gas mask from an overseas veteran, a fishing suit and sou'-wester, and arming himself with a gallon of formaldehyde, he made an attack. Taking the enemy by surprise, he shot the formaldehyde before the foe had a chance to go into action. Mr. Skunk took the count and was finished off with a shotgun.

Little Talks on Advertising

Joseph, the Florist, of San Francisco, realizes the value of having one striking announcement to catch the eye when using newspaper space. One of the neatest pieces of copy which we have seen recently has been used by him in the San Francisco Chronicle. The advertising takes only about three square inches, but has a large amount of white space to frame it, which is always a good point, and has a catch line in large black type, the words,

ORIENTAL PODS

The second line reads:

"The ideal floral gift—they keep indefinitely."

Then in small type, boxed in the middle of the space, Mr. Joseph goes on to say:

"We are shipping these pods to all parts of the United States and Europe. If you wish to remember your absent friends with these beautiful tokens, we suggest that you place your order at once, as the supply is limited."

I think there is no doubt that copy of this kind has brought the Joseph store a lot of good business. There is enough of mystery about the announcement to encourage people to visit the store to see what these remarkable Oriental Pods can be, and once there the majority of them probably have made purchases or left orders. Incidentally I might say that these pods are exceedingly useful for decorating a store window. They always attract attention, and have been used by many florists with distinct success.

The Foster Floral Co., of Oklahoma City, have also been getting out some good copy lately. They use the stock cut at the top of the copy to attract attention, and underneath in a lead box make the following announcement:

Flowers by Mail

Regardless of where you live in Oklahoma you can get Foster's flowers, crisp and fragrant, by mail. A letter to us with your name and address will start them to you or to any persons to whom you wish to send them.

Flowers packed in wet moss and oiled paper in a neat box. Rushed to destination by special delivery parcel post.

For mail delivery, add 35c. to check or money order. This also pays for insurance. Or for \$1.00 additional, we can send flowers by telegraph to any address in the United States.

SPECIAL OFFER CHOICE JAPAN IRIS

True to Name

LARGE UNDIVIDED CLUMPS

Can be divided into four to six strong divisions, 25c. each.

Am't.	No.

AMBLER SCHOOL REOPENED

The School of Horticulture for women at Ambler, Pa., has again opened its doors after the summer vacation, and with a large attendance. The greenhouse and gardens are very attractive, and are being carried on under the instruction of Miss Irene B. Nicolson. Miss Edith Thomas, instructor in poultry husbandry, has been recently added to the staff. Miss Ruth Anne Gerhard leaves the school this year, having accepted a position at the National Park Seminary, Forest Glen, Md.

ASPARAGUS PLUMOSUS, 3 inch, \$50.00 per 1,000.

VERONA FERNS, 2¼ inch, pot bound, fine plants, \$55.00 per 1,000, \$6.00 per 100.

NARROWS NURSERIES

92nd and 1st Ave. BROOKLYN, N. Y.

Mr. Foster then goes on to give a list of prices, something which I have long remembered as being good advertising, especially if the prices are not too high.

For a short, concise advertisement showing only two inches, single column of space, Arthur Cann, of San Jose, Cal., is supplying excellent copy. He starts it off with "Say It With Flowers," in large black type. Then continues in smaller type:

"Would you send a message of love or of friendship? Say it with flowers—lovely, fragrant flowers from Cann's. We are ready to deliver your box of flowers anywhere, anytime."

The Central Floral Co., of Detroit, uses a little side line in its advertisement which ought to be helpful. It is generally set in small, black faced type, and reads: "If it is inconvenient to come down, a phone call will satisfy you completely."

No. 14

THE TALK OF THE TRADE

As everyone expected who knows anything about the Messrs. Budlong, they were not long coming back after their hailstorm wreck, but it is a surprise indeed to hear that Monday morning of this week five thousand roses were sent by them into the Boston market. They are now making regular shipments and the stock is coming back with a rush. It must be remembered that there was not one single rose house on the place that didn't lose practically every pane of glass, so this cut stock is not coming from plants which were not disturbed and beaten up. I understand that there were approximately five hundred and fifty men at work housing in, and on Saturday, the 25th, about two-thirds of the place was covered. Probably by the time these notes appear the last light of glass will be set. This is what I call wonderful work, and they deserve all the credit in the world for the push and energy they have displayed.

Indications throughout the East at least point now to a general shortage of stock after the early and midseason chrysanthemums are out of the way. From that time on I doubt if there will be any great quantity of cut stock offered, at least not more than the market will very readily take care of. The chances are strong that the cut flower grower will get good returns for his stock. As the weeks pass, drawing into the fall, there is a continuous report of growers who are either closing down entirely or in part. To my mind this will bring about the natural result of a strong call for young stock in the spring. As soon as the sun begins to climb and heating troubles lessen, much of this glass which has been closed will reopen with the consequent strong demand for stock of every description. Rooted cuttings and young plants for spring sales will find callers aplenty and at prices which will be up to the market of last season.

I have talked with quite a number of growers who specialize in growing young stock for wholesale, and while one and all seem to feel that in general the prices of last season should hold, there is no particular tendency to attempt to boost these prices, and personally I think that they are now

about where they should stand for the time being. It is very apparent that the grower is not getting more than he deserves for the stock, but on the other hand I doubt if the buyer will be justified in paying any particular increase. Long-headed growers with whom I have talked are all laying their plans to operate all of the glass that they can possibly keep in commission and to be prepared with all the young stock that they can turn out for the early spring. The object of all is to keep every single square foot of space working hard every minute. The grower who does this has a very good chance of coming through the season well pleased with the volume of business and the financial results.

Growers with whom I have talked who raise their own stock and sell direct to their own retail trade have been very well pleased through this season with the returns they received from hardy lilies such as *Magnificum* and *Rubrum* in particular, but also *Album* and *Auratum*, and I think that this line of lilies could well be handled by every retailer who grows his own stock. The new crop of hardy lilies is of course, not due to arrive until close to December 1, but it is not too early to get your orders in if this has not already been done. As is the case with all other crops of lilies, they will be in rather short supply.

Reports are that a strong call has started already for such stock as *Crotons* and *Dracaenas* in the smaller sizes for work in mixed baskets and hampers, and it is a good plan to get this stock on hand and work into good hardy condition for the fall and winter trade. The narrow leaf type of *Crotons* are particularly good; the varieties *Golden Thread* and *Delicatissima* are probably as attractive as any of them, and there is a most wonderful collection of *Dracaenas* in a wide range of colors and varieties. Before the winter flowering *Begonias* and *Cyclamen* are in their prime, these fancy foliage plants fill in in fine shape.

There is a shortage of *Ficus Elastica* at this time in 2½ or 3-inch pots, and growers who plan to buy from August on into the fall in the smaller sizes to grow on find it difficult to get this stock. Anyone who has a surplus in the small sizes would do well to offer it as will be picked up readily.

Well grown plants of the various types of *Adiantum* are always good for retail store trade. *Cuneatum*, *Gracillimum* and *Hybridum* are of the more common types, but they make good hardy plants and stand up well in the house. For fancy purposes, of course, there is nothing more handsome than *Farleyense*, but for an all-round fancy *Adiantum*, the newer variety, *Farleyense Gloriosum* is I think the best of the lot. When

Adiantum Gloriosum

well grown this makes a handsome plant. The rich coloring of Farleyense is still held with a more hardy and rugged constitution. It holds better in the house, is not so heavy and consequently less liable to injury. Fine stocks of this variety are being offered this season and the retail stores are showing it up in fine shape, both as single plants and in combination with other subjects.

I find that the new aluminum foil being put out by the Pittsburgh Cut Flower Co. is a great convenience. It is put up in one pound rolls, and can be torn off just like a piece of tissue paper. Exactly the right length can be taken, so that there is really no waste in its use. The foil is about ten inches wide, and comes in rolls which weigh a pound. By keeping the roll in a handy place it is always ready for use, and makes a decided saving in time.

Signs seen in a florist's windows the other day.

First window: "Fools step in where angels fear to tread."

Second window: "But if you will insist on getting married, get the wedding flowers here."

Wonder what he's sore about?

THE BOSTON SHOW

The show at Horticultural Hall last Saturday and Sunday was the first disappointment of the season. The exhibits were not nearly so large and extensive as was expected, but perhaps this was because it was a little early in the season for a good fruit show. What fruit was shown was of good quality and included several specimens of uncommon varieties. A few tables of vegetables were shown, an especially interesting feature being seventeen varieties of tomatoes from Faulkner Farm.

The Blue Hill Nurseries had a fine collection of herbaceous perennials, among which was noted *Aster turbinatus* var. *Blue Hills*.

R. & J. Farquhar & Co. had a good collection of bulbs and plants.

The handsomest exhibit undoubtedly was that of orchids made by A. C. Burrage, for which he received a gold medal. The awards were as follows:

AWARDS FOR FRUITS. Hillcrest Prizes. Apples—Baldwin: 1st, A. P. Smith; 2d, Hillcrest Gardens. Bellflower: 1st, W. A. Stone. Fall Pippin: 1st, Hillcrest Gardens; 2d, Faulkner Farm. Fameuse: 1st, George V. Fletcher. Golden Russet: 1st, Hillcrest Gardens. Gravenstein: 1st, George V. Fletcher; 2d, Julius Meurlin; 3d, A. P. Smith. McIntosh: 1st, A. P. Smith; 2d, Hillcrest Gardens. Northern Spy: 1st, George V. Fletcher; 2d, George F. Stewart. R. I. Greening: 1st, A. P. Smith; 2d, Hillcrest Gardens; 3d, Faulkner Farm. Sutton: 1st, George V. Fletcher. Tolman Sweet: 1st, George V. Fletcher. Twenty Ounce: 1st, George F. Stewart.

Any other variety: 1st, A. P. Smith. Wealthy: 2d, Isaac H. Locke. Wealthy: 3d, Julius Heurlin. Winter Banana. Crab Apples—Hyslop, 24 specimens: 1st, Julius Heurlin; 2d, Faulkner Farm; 3d, George F. Wheeler. Any other variety: 1st, Hillcrest Gardens. Pears: 1st, Edward B. Wilder; 2d, John Bauernfeind; 3d, George V. Fletcher. Belle Lucrative: 1st, Mrs. Elbridge Torrey; 2d, Edward B. Wilder; 3d, F. W. Dahl. Bose: 1st, W. G. Kendall; 2d, George F. Stewart; 3d, George V. Fletcher. Dana Hovey: 1st, W. G. Kendall; 2d, F. W. Dahl; 3d, George V. Fletcher. Louise Bonne de Jersey: 1st, Mrs. Elbridge Torrey; 2d, F. W. Dahl; 3d, Faulkner Farm. Seckel: 1st, W. G. Kendall; 2d, George V. Fletcher; 3d, Faulkner Farm. Sheldon: 1st, Mrs. Elbridge Torrey; 2d, George F. Stewart; 3d, Faulkner Farm. Any other variety: 1st, Edward B. Wilder; 2d, Faulkner Farm. Worden Seckel; 3d, John Bauernfeind. Peaches—any variety: 1st, W. G. Kendall; 2d, F. W. Dahl. Quinces—any variety: 1st, George V. Fletcher; 2d, Isaac H. Locke; 3d, Edward A. Clark. Melons—3 specimens: 1st, Faulkner Farm. Honey Drop; 2d, James Donald, Sutton's Triumph; 3d, James Donald, Blenheim. Grapes—Brighton, 6 bunches: 1st, John Bauernfeind; 2d, Hillcrest Gardens; 3d, W. G. Kendall. Concord: 1st, John Bauernfeind; 2d, Mrs. M. J. Merrill; 3d, James Donald. Delaware: 1st, W. G. Kendall; 2d, Chales W. Libby; 3d, Hillcrest Gardens. Eaton: 1st, Peter Anderson. Herbert: 1st, Charles W. Libby; 2d, Hillcrest Gardens; 3d, John Bauernfeind. Moore's Diamond: 1st, John Bauernfeind; 2d, Peter Anderson; 3d, Hillcrest Gardens. Niagara: 1st, Peter Anderson; 2d, Hillcrest Gardens; 3d, John Bauernfeind. Wilder: 1st, John Bauernfeind. Worden: 1st, Peter Anderson; 2d, John Bauernfeind; 3d, Mrs. M. J. Merrill. Gratiuties: Peter Anderson, Seedling Grape No. 17; E. A. Adams, display of Seedling Grapes.

AWARDS FOR VEGETABLES. Hillcrest Prizes. Beans—String, green, 50 pods: 1st, Faulkner Farm. Sutton's Perfection; 2d, Faulkner Farm. Plentiful; 3d, D. R. McLean. Wax, 50 pods: 1st, Faulkner Farm; 2d, James Donald; 3d, James Donald. Collection, dry shell beans, four varieties, one pint of each: 1st, A. L. Stephen; 2d, Faulkner Farm; 3d, Faulkner Farm. One pint of any dry bean: 1st, Faulkner Farm; 2d, A. L. Stephen; 3d, D.

R. McLean. Cabbage, 3 heads: 1st, Hillcrest Gardens; 2d, Faulkner Farm. Cauliflower, 3 heads: 1st, Hillcrest Gardens; 2d, A. P. Smith. Celery—4 bunches: 1st, Hillcrest Gardens. Paris Golden; 2d, Hillcrest Gardens. White Plume. Swiss Chard—4 bunches: 1st, Faulkner Farm. Sweet Corn—12 ears: 1st, F. S. DeLue. Golden Giant; 2d, Faulkner Farm. Golden Giant; 3d, Hillcrest Gardens. Golden Bantam. Field Corn—12 ears, traced: 1st, Wilfrid Wheeler. Egg Plant—4 specimens: 1st, Faulkner Farm; 2d, Hillcrest Gardens. Potatoes—12 specimens: 1st, D. R. McLean. Nebraska; 2d, D. R. McLean. Early Rose; 3d, Hillcrest Gardens. Irish Cobbler. Tomatoes—12 specimens: 1st, Faulkner Farm. Farm, Stone; 2d, Hillcrest Gardens. Stone; 3d, Hillcrest Gardens. Bonny Best.

Gratiuity: Faulkner Farm, collection of 17 varieties of Tomatoes.

AWARDS FOR FLOWERS. Gratiuties: Blue Hill Nurseries, collection of herbaceous perennials.

Gold Medal: A. C. Burrage, unique display of choice Orchid plants in flower.

First Class Certificate of Merit: Blue Hill Nurseries, *Aster turbinatus* var. *Blue Hills*.

Honorable Mention: A. C. Burrage, *Cattleya Fabia*; *Cattleya Petersii*; *Cattleya Gaskelliana alba*; and for *Cypripedium Germaine Opoix*. R. & J. Farquhar & Co., collection of Bulbs and Plants.

THE MARKET

Weather conditions in and around Boston have caused a glut in every kind of flower. On account of the extremely unnatural weather conditions, gladioli and asters are still thriving and swamp the market. Carnations are also sprouting out faster than the growers like, and this is also true of roses. Chrysanthemums are also coming along too fast, and it looks as though a very bad time would follow this hot spell.

GREY DAYS

Sunshine is like smiles. It ripples. It glorifies. Yet there is also a quiet beauty in our grey days. Dull leaden skies are gloomy, but how often the grey clouds are woven in with yellow lights or are a study of varying shades of grey.

Some flowers are beautiful under grey skies or against grey rocks which lose their soft charm under bright blue skies, amidst green grass and trees;—the red bud or judas tree, fireweed, Joe-Pye-weed, and some of the sedums. Here in America we have not the old stone ruins of abbeys and castles, but they are often more beautiful under grey skies than under blue, they seem to add to the feeling of romance, the thought of other days.

Under a grey sky we often see more detail to the landscape than under the glare of the sunshine, and the colors are more marked. A field of golden-rod against purple hued hills with dark pines and spruces under a grey sky with some old stone-walls crossing the fields, is a picture which makes our New England dear to us. Such a field is like a gentle woman who does not sparkle with gayety, but is good to go to for peace and rest and comfort. It is the charm of the subdued quiet ways of life.

M. R. CASE

Hillcrest Gardens, Weston, September 15th, 1920.

PACKING CUT ROSES

Long-stemmed roses, especially Beauties, are being cut now, and care should be taken in packing them to ship them to market. If they are to travel a long distance, it is best to tie them, and this is a simple matter, for after the roses have been packed, a piece of rope can be run around the outside of the box and then introduced within, through the sides, wherever wanted. Then the two ends can be tied over the stems. This plan keeps the flowers from sliding around and prevents their getting bruises and broken. It is a good plan, also, to put a double thickness of newspapers between the layers of stems, every three or four rows, in order to keep the thorns from puncturing the leaves. Thorny varieties should always be packed in this way, as when the leaves are damaged, the buds do not show off as well as they should, and consequently do not bring the high prices which they otherwise would. If you pack two layers of roses in one box, be careful not to have the white roses at the bottom, for they show bruises more readily than roses of color, and the blooms at the bottom of the box

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1879.

The following is so much better than anything that we can write that we are submitting it without any apologies except to the New York Sun, from which we borrowed it:

Strike and the world strikes with you, work and you work alone; our souls are ablaze with a Bolshevik craze, the wildest that ever was known. Groan and there'll be a chorus, smile and you make no hit; for we've grown long hair and we preach despair, and show you a daily fit. Spend and the gang will cheer you, save and you have no friend; for we throw our bucks to the birds and ducks and borrow from all who'll lend. Knock, and you'll be a winner, boost and you'll be a frost; for the old sane ways of the pre-war days are now from the program lost. Strike and the world strikes with you, work and you work alone; for we'd rather yell and raise blue hell than strive for an honest bone. Rant and you are a leader, toil and you are a nut; 'twas a bitter day when we pulled away from the old-time workaday rut. Wait and there'll be a blowup, watch and you'll see a slump, and the fads and crimes of these crazy times will go to the Nation's dump.

It is interesting to find a general tendency on the part of the florists, especially of retail florists, to take part in various flower exhibitions, large and small. This tendency has increased notably since the war, during which time exhibitions were largely suspended. Formerly florists paid but little attention to the small shows, apparently thinking they were hardly worth their while. The shows were, and still are, in the hands for the most part of amateurs and semi-professionals, but it has been found that much can be done to increase their value, and interest for the public, by staging exhibitions from professional growers and retail florists. The latter, on their part, are finding that such shows are worth the time and attention required to stage a worthwhile exhibit, because of the intimate contact which they bring with the flower-loving public and the advertising which is bound to accrue from the prizes awarded them, as well as by the notices which they get in the local papers. It is one of the most helpful signs of the times that the small shows are receiving the

co-operation of the professional flower grower and seller.

There is room, however, even at the larger shows for better displays and more of them on the part of florists, particularly in the line of flower arrangements, table decorations and the planning of color schemes. Perhaps the Massachusetts Horticultural Society has been remiss in some ways so far as making its shows cater to the general public, but it seems to have struck a new note in its plans for the coming year. If these plans work out as agreed upon tentatively, there will be a large number of small shows, and at each of them there will be lectures or talks about the principal flowers exhibited, and other ways of making the shows useful to the amateur. This plan is due largely to the enterprise and far sightedness of Miss Marian Roby Case, whose articles in HORTICULTURE have attracted no little attention.

Miss Case believes that shows of this character ought to be more than mere flower exhibits, and by her generosity is making it possible for new methods to be introduced. These methods are so sound and promise so much that they are almost certain to be taken up by societies in other parts of the country, with the result that there will be an awakened interest on the part of the flower-loving public, a much larger attention because of the increased benefits received and naturally a financial support which has been withheld in the past.

After all, the purpose of the public flower shows should be to serve the needs of the small growers and this is something which will be of benefit to all horticultural interests, commercial or otherwise, because it will certainly stimulate the growing and buying of plants, seeds and flowers. It is a long step in the right direction.

Many guesses have been hazarded within the past year as to the bulb situation this season. Apparently this situation is crystalizing rapidly, and the fact is evidenced that in many varieties there are plenty of bulbs, and at prices which are far lower than anticipated. The bulbs have been marketed in such a way, however, that there has been much dissatisfaction on both sides of the water. In England, as here, early in the season the impression was given that the supply was none too plentiful, especially of Dutch stock, and that prices would naturally have to rule high. The Dutch growers organized closely, and put up a stiff program. This program, however, has not worked out as expected. High prices were reached early in the selling season, but buyers soon balked, stocks piled up, and as a result bulbs are being reddled all through England at ridiculously low prices.

It is true that there is much feeling across the water because of Quarantine 37, and a general desire on the part of many foreign growers to get back at this country in the only way which seems possible, that is, through exorbitant prices. It is pointed out that this quarantine has meant ruin for many plant growers, especially in Belgium. And in this connection it is worth mentioning that very persistent efforts are being made across the water to bring about some solution of the problem. Large stocks of azaleas and other plants exist in Belgium and Holland, and the American outlet is about the only one which would bring about their dissemination. Negotiations have been started, we understand, with the Federal Horticultural Board, looking to some sort of arrangement which will permit the sending in of many plants now barred, under certain restrictions. With these efforts being supplemented by increased activity on the part of horticultural societies throughout the United States, looking to the same end, it would seem as though the Federal Horticultural Board would have to agree upon some sort of measure which would ameliorate the present difficulties.

Flowers Under Glass

From now on the benches will not dry out as easily as they have during the summer, and it will be necessary to water them in spots when the rest of the house is wet enough. Especially watch the front of the benches for if they are allowed to get too dry the roses will be checked in their growth. When watering, be careful not to use too much pressure so as to wash the surface or injure the plants. Of course it takes more time to use a slow stream, but the end justifies doing so. Sometimes poorly advised employes flood the benches. This is very bad practice, washing out much plant food. At the same time enough water must be given so that the soil will be wet thoroughly and evenly all through. Make sure that your benches have no dry spots when the watering has been completed. See also that they are mulched, for when the earth is exposed the roots do not make nearly as good growth.

Box or pot up the Dutch bulbs as soon as they arrive. They cost too much to leave them lying around for even a few days. When the work has been completed, give them as much water as the soil will take up. This has the effect of plumping up the bulbs, and putting them in the right condition to make a good start. Then store them away in a coldframe, or if you have one, a bulb cellar, and keep them dark and moist until they have made a good, strong root growth. You ought to have a good compost when potting up the bulbs, one consisting of, say three parts good loam and one part of dry cow manure, with some sharp sand added. Oftentimes a compost from the carnation or rose house, with a little fresh loam and old manure added will serve very well.

Bouvardias can be lifted before hard frost and stored in flats of soil for stock. If desired, however, they can be planted instead in a bench in a warm house to give a crop in February and March. They are not hard to lift if you take a little ball of damp earth with them, but they are sure to wilt badly, and be slow in recovering, if the earth is shaken off. After the plants have been lifted, give them shade for a few days. They like a

temperature of 60 degrees at night. Although Bouvardias may not be as popular as they once were, they are still good sellers, and every florist needs them.

If you are handling seedling primulas, calceolarias, and cinerarias keep them cool and give them plenty of ventilation. Remember that all plants which have been lifted from out doors and potted up must be kept well sprayed and given light shade until they are re-established indoors. Crinums and other bulbous stock should have finished their growth before they are lifted. This serves to keep them dormant much longer in the spring.

It is time to prick out pansies, violas, double daisies, myosotis and similar plants for spring sales. Be sure that the geraniums have plenty of ventilation and all the sunlight they can get. Water them only when they show signs of drying out. This is a good time to lift, divide and replant almost all kinds of hardy perennials.

Orchids require less shade now that the days are getting cooler and need as much light as they can get. By the middle of October such orchids as Cattleyas, Laelias, Odontoglossoms, Dendrobiums and Miltonias can stand full sun. They must have plenty of ventilation, though, and you should be careful to change the air at least once a day. Be very careful about watering orchids now that dark rainy days are common. Whatever watering is needed should be done early in the morning so that the plants will have a chance to dry out before night. Discontinue overhead syringing but gradually, and when syringing is done let it be on bright days in the morning. Use only a fine, misty spray.

NEWS NOTES

The Bristol Nurseries Company, Bristol, Ct., have filed incorporation papers with the secretary of state, showing capitalization of \$50,000. The incorporators are Paul M. Hubbard, Alex. Cumming, Jr., and Lila T. Cumming, all of Bristol.

At the Essex County Agricultural Fair at Topsfield last week, William H. Symonds, florist of Marblehead, Mass., won eight blue ribbons for the best exhibition of flowers.

William W. Kline, proprietor of the Mohican Peony Farm, Springmont, Pa., has sold his establishment to David W. Sternbergh, who will continue and enlarge the business.

Derrick, the florist, has temporarily moved to a new location on Chestnut street, Oneonta, N. Y. As soon as alterations are completed, he will move to the lobby of the Oneonta Theater.

George Watson's Corner

"You in your small corner and me
in mine."

No doubt Tom Roland is already thinking of his high duty as a public official and worrying about the big speech he will have to write in advance. It takes some thinking that speech which only some of us hear delivered, but which is always printed so that from Maine to California he who runs may read.

There are various things Tom must think about, out on that wave bound island of his. (No, it isn't exactly an island in the Atlantic Ocean, but pretty near it. The handle is thin and could easily be cut off.) As the billows boom over his midnight slumbers what is he thinking of, who can tell? Fan tan in Hong Kong or prohibition in Quebec. Whether to aeroplane to Europe and locate in Berlin where there is still some good Pilsner or take a taxi to the nearest steamer to London via Boston and sit down in the old Oxford in Piccadilly and say "How" like a human being once more. In any event the speech will be a very difficult one to write because Tom will be lacking in enthusiasm for his adopted country. He will be thinking of the plant and flower quarantine oligarchy one minute and the next minute about the Volstead invasion of a man's personal rights—the right the Anglo Saxon has always fought for—"a man's house is his castle." On the public highway we do as the community orders. In your home—that is your business. No one has a right to tell you what you shall eat or drink. If we all get together and make a speed law limit we all keep it, but to issue edicts without consulting us, that is false to all fundamental laws of democracy as understood by the American people. The great Aristotle to whom we always go back when in doubt says about government: "That form of government which is best administered is the best."

This means no matter whether it's a King or a democracy, the administration is the big point.

In that connection let me quote a good thought by Henry Morley on Aristotle. It will be refreshing to most of you:

"Great wealth he regarded as like great poverty, a great evil; strength and happiness seated in the mean, that enabled a man to maintain body

and mind in vigor, and do his duty to his home and country."

That system of government is best which is best administered.

Boys get that into your system. Don't let us go crazy about Democracy. It may go rotten also just the same as Aristocracy may. Look at the Horticultural Board in Washington today. It is supposed to be a democracy but is more of an absolute monarchy than anything ever heard of since Aristotle's day.

Ain't we a bunch of pure and simple simps to stand for it. Good Lord! we ain't men! we're monkeys.

I was talking with a man high up in government affairs and told him about the Oligarchy—alias the Horticultural Board of Washington. He was very much astonished. Found it hard to believe that a bunch of understrappers could have worked up such an underground school and secret society of Bolsheviks in an open and above board democracy like ours. But when he heard a few facts—whew! What do you think he said? He said this: "If you can spare the time to take a run down with me to a certain party in Washington that you and I both know personally the whole thing will be wiped out at one swoop and don't you forget it. We felt very much like throwing down our shoe makers' last, throwing our spectacles in the discard and going to it right there and then. We could see their finish and a good riddance. But of course there's always a but, and the but was this: always go easy with

your reforms. These boys are doing a lot of good and things are going nicely if the kids would only behave. So let's postpone it a little and give them one more chance to pull in their horns and try and find some better way to exercise their glowing shafts of energy than in stopping the orderly affairs of us poor humans. So he said all right we'll call it off for a little. But tell those fellows what's coming to them if there's any more of this silly stuff. This is a democracy. The people rule. We will stand for no kings or cabals.

A retail flower shop will be opened in the borough of Lansdowne, Pa., on Oct. 8 by Chris Barke. He will conduct it under the name of the Lansdowne Flower Shop.

The periwinkle is about the last flower one would expect to see in the cut flower market and yet we have noticed it here and there the past ten days. Twenty-five cents a bunch. We carried a spray 'round to the 'poets' corner' at Kelly street and presented it to Tom Daly, remarking here laddie here's one that was named by your old Grecian friend Pliny. Is that so, very interesting, but we don't pronounce it Pliny like you do—we pronounce it Pleeny. Is that so indeed. Well please understand that yours truly uses the Boston accent and old Paul Revere and Chris Attucks were as good Sinn Feiners in their day as any emotional and superior Philadelphia Celt of the present day and we prefer to stick fast to good precedent.

Besides, according to Josh Billings, another good authority, a man has as good a right to pronounce a word the way it ain't spelled as to spell a word the way it ain't pronounced. All right old top, says Tom, Ill put it in my buttonhole anyhow—and thank you. The reader no doubt thinks this is a long story about a little thing like Vinca minor, but what we really wanted to remind people of, now that fall seeding of lawns and grounds is in order, was that this is an excellent hardy trailer for growing under trees where it has been found impossible to make grass grow. So you see there is a little saving grace in this tale of the trailing myrtle, after all.

NEW NURSERY FIRM

Alexander Cummings is to leave the employ of A. N. Pierson, Inc., at Cromwell, Conn., where he has been for seven years in charge of the landscape and nursery department as well as the perennials. Before coming to Cromwell he was for eight years in charge of Elizabeth park in Hartford. Mr. Cummings is to form a partnership with Paul M. Hubbard, a Bristol florist, which will be known as the Bristol Nurseries, Inc. The new firm will go into the nursery and landscape gardening business on a large scale.—Hartford Times.

ENLARGING PEONY GARDEN

On Monday of this week Mr. E. L. Parker received at Fayetteville railroad station, 27 barrels weighing 2,908 pounds of peony roots, being an advance shipment of 10,000 peonies for his enlarged peony garden. Mr. Parker had in flower this summer nine of the ten varieties that took the highest honors at the American Peony Association Show in Reading, Pa., in June.

He says he has sent a check for one root of the other one and expects that will blossom with the others next summer.—Fayetteville, N. Y., Bulletin.

The Steamer Edward Lockenbach recently arrived in New York City with fifteen million Dutch flowering bulbs including tulips, hyacinths and narcissi.

RESOLUTIONS ADOPTED BY THE NATIONAL ASSOCIATION OF GARDENERS

The following resolutions were adopted by the National Association of Gardeners at its recent convention in St. Louis:

WHEREAS, it has become quite evident that if sign board interests are permitted to continue unmolested they will soon succeed in the despoilation of the beauties of the natural scenery along our highways,

THEREFORE, BE IT RESOLVED, that the National Association of Gardeners take the initiative to institute a country wide propaganda to arouse an indignant public sentiment against the sign board interests, and certain national advertisers who are with unsightly sign boards defacing the landscape views along our highways, and

BE IT FURTHER RESOLVED, that the National Association of Gardeners invites all other organizations, interested in having the natural scenery along the country's highways, protected and conserved, to co-operate with it in suppressing the sign board vandalism.

NEW SOURCE OF MOSS

A new source of moss seems to have been discovered in Mason County, Washington. One of the papers contains the following:

"Another heretofore wasted natural resource common in Mason County has found commercial importance and has added that much to the avenues of making some extra money by the rancher. The latest is the moss which grows thick on the maple trees in the shaded valleys and which is in demand for packing purposes by florists and nurserymen.

"This week a shipment of some 300 bales gathered in the Skokomish Valley was shipped from Union City to San Francisco, the average weight of the bale being 75 pounds, bringing about 3 cents a pound. As the moss is found in large quantities convenient to the road in the Skokomish Valley it was gathered and brought to a central place, where it was baled in an ordinary hay baler and hauled by trucks."

Frank B. Smith has opened a new store at 33 King street, West Hamilton, Ont. He has the new store completely equipped, which is very attractive, much use having been made of mirrors to set off the interior decorations. For several years Mr. Smith was manager of the John Connors Store.

Be sure and get Meyer Threads and take no other.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Japanese anemones have been blooming remarkably well this season and under good cultivation make one of the best shows of any late flowering plant. Of the standard varieties of *Anemone Japonica*, in pure white, *Japonica Alba*, Whirlwind and *Geante Blanche* are the best. Good, tall, pink sorts are *Queen Charlotte*, *Alice*, *Lorelei* and *Rosea Superba*. *Prinz Heinrich*, *Brilliant* and *Purpurine* have carmine and magenta shades. As a rule, Anemones prefer a light soil, well drained, with plenty of humus. The Japanese class is particularly responsive to richly manured ground, surface mulching and a half shady position in the Middle Atlantic States, with an open sunny exposure in the North.

It seems to me that the rose growers of New York are setting a pace for those in other parts of the country. Rose growing around Syracuse, Utica and other cities in Central New York has received a tremendous impetus, largely I presume on account of the enthusiastic efforts of Rev. Mr. Mills. The latest enterprise is the movement

to plant roses all along the highway between Syracuse and Auburn. The Auburn Rose Society is fathering the movement and has asked the Syracuse Rose Society to co-operate. This would certainly be an excellent feature and one which would receive the enthusiastic approval of motorists. The railroads have found it worth while to make plantings of climbing roses, especially *Wichuraianas* along their lines, and there is no reason why state highways could not be beautified in the same manner.

Gardeners on private places where there is no steam and only small houses of roses can accomplish good results in getting rid of mildew by putting a lantern or two in these houses at night, turning the light about half way up and sprinkling a layer of sulphur over the top of each lantern. No danger will be found in this practice if the light is not turned too high, and if a little air is left on. Mildew will be killed readily, and then with a little heat from the hot water system there will be no difficulty in keeping it in check. It is not a good

plan to use oil stoves for burning the sulphur, as they are almost certain to get too hot, with the result that the sulphur itself gets on fire and the crop is ruined. A little experimenting with lanterns, however, will show just how high to have them turned up, and show the practical value of the plan. Be sure to have the plants wet at the roots when vaporizing sulphur in this way.

A British eye is quick to note the serious application of the Belgian people to industry, says a writer in the *Manchester Guardian Commercial*. So far as the countryside is concerned, it seems to be a land of no leisure and no color. One looks in vain for a football ground, a tennis lawn, a cricket pitch—even for children at play in a meadow. There is a similar scarcity of flower gardens. Round the towns the villas have very fine lawns and gardens, and the nurseries furnish the flower-women on the Grand Place in Brussels and the Place Verte in Antwerp with gorgeous blossoms; but the cottage gardens so familiar in England simply do not exist. The train runs through mile after mile of land cultivated up to the very doors of the farmhouses and cottages without revealing a single rose-bush or Hollyhock anywhere.

At the September meeting of Lancaster County Florists' Association with President Willis B. Girvin of Leola, Pa., Mr. L. C. Dyer gave an interesting talk on his trip to Portland, Ore. as a representative of the Kiwanis Club. In speaking of the roses he made a point of the fact that in building a new section one party would plant a garden of roses adjoining the street and every one along that street would follow suit. One thing that struck him as peculiar was the fact that almost every garden along the street had a pair of scissors hanging convenient, with a little card announcing that if you wanted a rose you were to cut it off and welcome.

Wagland, the Florist, of Lawrence, Mass., has been making a vigorous opposition to the smoke nuisance of the mills. He claims that his business is hurt by the cinders and ashes falling from the smoke.

The Boston Park & Recreation Department has asked for bids for building a range of greenhouses at Franklin Park.

Mr. Wm. C. Newton, has moved part of his florist establishment from Provincetown, Mass., to Hyannis, and intends to have the latter the center of his business, keeping one house in Provincetown as a branch.

Anemone Japonica Queen Charlotte

NEWS NOTES

William J. Devery has been appointed gardener on the George Fearling estate, Westwood, Mass.

Thomas W. Head, formerly superintendent of Melody Farm, Lake Forrest, Ill., is now superintendent on the Herbert Straus estate, Red Bank, N. J.

Harry Forest, Jr., and Miss Selma Florin have bought the flower shop of Charles Doherty at McKeesport, Pa. the name will be carried on under the name of the F. & F. Flower Shop.

George Dennis will have charge of a new greenhouse now being erected by the Grand Trunk Railway Company at Battle Creek, Mich.

George F. Crosman, formerly a well known seedsman at Rochester, N. Y., died recently at the age of sixty-nine years.

T. D. Hefko of Marshfield, Wis., has originated a new double snapdragon which he calls June Hefko and which is being handled by the local trade. It is pink in color, very compact, and seems to be an excellent flower for retail work.

Last Saturday afternoon, Charles H. Totty who is just back from his trip to Europe, was given a welcome home dinner at the Mansion House, Morristown, N. J. Those who attended the event met in New York and motored to the rendezvous. A very happy time was enjoyed and Mr. Totty spoke interestingly of his trip across the water.

The Kansas City Florists' Club has elected the following officers: President, T. J. Noll; vice-president, W. J. Barnes; secretary, Wm. Wade; treasurer, L. R. Bohannon. A committee to draw up by-laws consists of N. E. Carter, Hugo R. Neff, Arthur R. Smith, Adolph Mohr, A. F. Barbe and C. A. Chandler.

Nelson Butler has been engaged to take charge of the orchid collection of W. J. & M. S. Vesey at Fort Wayne, Ind. This firm intends to greatly increase its number of plants and now has six orchid houses. Mr. Butler was for several years in charge of the private collection of George J. Gould at Lakewood, N. J.

John R. Prouty is to establish a nursery at Baldwinsville, N. Y., for the growing of gladioli, peonies and other hardy plants.

We regret to announce the death of David Weir, of Roslindale, Mass., who passed away some weeks ago, after a brief illness. Mr. Weir was very well known in the gardening fraternity, having been for several years superintendent of Faulkner Farm, in Brookline. He was an able gardener, and possessed a great many friends who will be sorry to hear of his passing.

NATIONAL PUBLICITY CAMPAIGN

Reference has frequently been made to orders for flowers and plants directly forthcoming from our national magazine advertisements.

The advertisements all feature the telegraph delivery service and the filling of orders in any city or town in the United States and Canada. Sometimes the magazine publishers receive requests for names of florists performing such service in specified towns, which information they readily supply from printed lists available. Robert L. Graham, the Baltimore florist, recently received an order from Seoul, in far-away Korea, for the delivery of a plant in Baltimore on a certain date. The order was credited to a campaign advertisement in the Literary Digest, and the sender wrote: "This experiment is being looked upon with great interest by many, and, if successful, will no doubt prove a benefit to your society." The plant was to be in flower, and was a birthday gift to a mother. The message "Say it with Flowers" was accepted in a land many thousands of miles away. What must be its effect in our own land?

The Daily Mail of Nevada, Mo., in an editorial published last month said: "The slogan of the florist is "Say it with Flowers." It may be expensive, but it is an eloquent and impressive way. There are occasions when words fail, but seldom do flowers. In the days of our youth we gathered the daisy and the wild violet, and now the florist takes the place of the prairie, the valley and the hills which are no longer public property. If it wasn't for the florist, we would be denied the privilege we often exercise frequently to express the thoughts and the best impulses of the mind and heart."

Still, the florists are not rendering anything like the service they could, because they are not making known sufficiently the occasions for such service. Major O'Keefe put the matter very plainly before the Cleveland Convention when in his address, he gave statistics in regard to "happenings." He said: "When one person dies, two are born, and there are ten marriages which take place for every fourteen deaths. If it was a custom as deeply rooted in the habits of people to send flowers for a birth as it is now a custom to send them for a death, you can see what an increase would be effected in the florists' busi-

ness. To every thousand people in the United States there are 23 births a year while there are only 14 deaths. Add the ten marriages to any thousand and you get a total of 4,700,000 happenings each year in which flowers should have a part. One purpose of the Publicity Campaign has always been to link flowers with something joyful, to make them sing the song of happiness rather than to have them in the main remind people of the departure of a friend."

It is evident that many florists have not given sufficient thought to this object of the campaign, otherwise, surely, they would have given support to the fund which is gradually making this object possible of accomplishment. It is absolutely necessary that the people be educated in the direction of a more general use of flowers, and it can only be done through well organized publicity. There does not appear to be any question about the result, we have had more than sufficient in the way of example to assure us upon this point. All that is needed is financial support to enable our Publicity Committee to stick at the work. They are willing to go through with it. Are you willing to support them? Why not settle this question at once by sending into the Secretary your cheque covering your subscription?

JOHN YOUNG, Secy.

43 West 18th Street,
New York.

**TWENTY-FOUR HOURS WITH A
NON-BELIEVER**

It was a restful night. He rises refreshed, dresses—his holeproof hose supported by Paris garters, his feet shod in Regals, a Manhattan shirt, Arrow Collar, and a Hart Schaffner and Marx suit, and he is ready for breakfast, when he partakes of Cream of Wheat, Kellogg Corn Flakes, Quaker Oats or Aunt Jemima pan-cakes, drinks Yuban Coffee or Bakers Cocoa, sweetened with Domino sugar and possibly a touch of Carnation milk to modify the flavor.

After breakfast he puts on a Stetson or a Knox hat, and Adler or Fownes gloves, and starts downtown. As he goes to the office a sign on a dealer's window reminds him of spearmint gum. At the office he dictates his mail to the Dictaphone which is written on a Remington or an Underwood typewriter on Old Hampshire Bond paper, and he signs his name with a Waterman pen.

At his barbers he is shaved with a Hammer Brand razor, followed with a Pompeian massage and Herpicide or Pinauds on his hair.

On starting home he lights a Girard

or a Tom Burns cigar and rides in a Hudson, Packard or some other advertised automobile. His home is painted with Sherwin-Williams paint. There's a Crex rug on his porch. He opens his door with a Yale key and turns up his Mazda light. His kitchen you will find recently made new with Jap-a-lac, filled with the trade marked goods purchased by his wife, such as Campbell's Soups, Van Camps Beans, Knox Gelatine, "57 Varieties," Washburn Flour, Royal Baking Powder, Nabiscos, Uneedas, Lowneys Cocoa, Old Dutch Cleanser, Ivory Soap, and in his basement a case of Welch's Grape Juice.

When he goes to bed at night he puts on his Faultless pajamas, turns off his Tungsten lamp, and seeks repose on an Emerich pillow and an Ostermoor mattress. Funny thing about him, though—he doesn't believe in advertising.

How well the above article helps to emphasize the fact that we must continue the use of our slogan "Say it with Flowers" so as to make it world-wide, is the fact that with so many advertised names and products, it has been left out of the list.

Doesn't the article itself prove conclusively the needs of more advertising for our slogan, also the helpfulness of advertising generally. Am indebted for the article which was

clipped from the "American Seedsmen" to our mutual friend Charles N. Cotter, of Jamestown, N. Y., who incidentally, is one of the best students on worldly things generally, in the country.

Perhaps some of our friends in the craft will appreciate the article as applied to why we should still continue our publicity program.

HENRY PENN, Chairman,
National Publicity Campaign.

**NATIONAL FLOWER GROWERS'
ASSOCIATION.**

There will be a Board of Directors' meeting of the National Flower Growers' Association on October 12th at the Claypool Hotel, Indianapolis, Ind.

The principal matters to act upon are as follows: Revising Sections 1 and 3 of Articles 8 and 10 of the By-Laws; selecting a meeting place and date for the next annual meeting, and considering plans for the organizing of local districts.

Secretary J. F. Ammann, after this meeting, will take a trip East at the request of several locals who ask for assistance. The following schedule of meetings have been arranged: Baltimore, October 15th; New York, October 18th; Buffalo, October 19th; Cleveland, October 20th; Detroit, October 21st; with a possible stopover enroute at Pittsburgh and Philadelphia.

J. F. AMMANN, Secy.

150 South Main St., Milford, Mass.

Al. L. Bock, well known to the retail florist trade in Boston, is now with Houghton Gorney Co.

Mr. and Mrs. Henry Penn, Mr. and Mrs. W. N. Craig and Mr. and Mrs. George Stewart made a visit to the Crane estate at Ipswich, Mass., last Sunday and were shown over the grounds by Supt. Robert Cameron, for many years at the Harvard Botanical Garden. Later they enjoyed a picnic on the beach. The visitors have much to say about the hugeness of the Crane place and the excellent way it is being kept up under Mr. Cameron's management.

SEED PRICES

They are Likely to Advance According to Seedsmen League Officials

The following statement will appear in the forthcoming confidential report of the meeting of the directors of the Wholesale Seedsmen's League, held at Chicago, September 29th, 1920.

"While the directors recognize the right and duty of each member of the Wholesale Seedsmen's League and every other seedsmen to fix the prices charged for his own wares to suit himself, we call attention to the present unusual conditions which ought not be overlooked with regard to values of garden seeds.

The Seed Trade recognizes that the decline in prices of commodities so noticeable at present throughout the country found a parallel in garden seed declines of more than a year ago. It should also be kept in mind that the over-production culminating in certain large crops in 1919 has not been continued in 1920 but that on the contrary present harvest of seeds are comparatively small. Moreover, surplus stock have been largely reduced. Therefore, since the supply has decreased and will continue to decrease relative to demand the tendency from now on must be toward higher rather than lower prices. Seedsmen will be constrained to consider replacement costs rather than the bargain prices that were fixed in 1919 and 1920 by the need to dispose at once of articles more or less perishable.

In view also of increased fixed charges, such as freight rates, printing, coal, etc., we look forward to advances rather than to declines in the values of which this circular is an appraisal. We urge members to be sure of their ability to replace stocks before sacrificing present holdings.

Furthermore, in making purchases we suggest unusual caution in order to avoid certain surpluses of inferior quality or low germination."

NEWS NOTES.

Ben Carrick is now employed by Marche & Co., having resigned his position with Gude Bros., Washington, D. C.

Mr. M. J. Brinton, one of the largest growers of lilies and other bulbs in Christiana, Pa., and Miss C. Teresa Philippy, were recently married.

N. Goldie, formerly with Liggett, florist, is now manager of the recently opened Princess Florist, 321 Yonge street, Toronto.

Vol. XXXII

OCTOBER 9, 1920

No. 15

THE TALK OF THE TRADE

At the last meeting of the Gardeners' and Florists' Club of Boston, that body passed a resolution which indicates in a general way the feeling of the growers as regards the Dutch bulb grower. The uncertainty in price which has prevailed this year and which seems to have been altogether unnecessary has worked out badly for all concerned. The following resolution is what I have reference to:

"Resolved, that the members of the Gardeners' and Florists' Club of Boston, many of whom are large purchasers of Dutch bulbs and plants, view with deep concern and indignation the continued importation of bulbs to be sold in auction rooms at prices far below those asked by canvassers early in the present season, and call upon other florist clubs and similar organizations to join with them in refusing to purchase any bulbs from Holland next season, unless the growers and the Dutch Bulb Growers' Association take steps to put a stop to this unfair and pernicious practice."

It is a well known fact that many who bought bulbs early paid a price that was altogether too high, and even at this present date there seems to be no stable values nor prices which anyone can work upon. It is simply a case of buy your bulbs for the lowest price possible and take a chance on what will happen later on. Such methods are never good for business and cause more harm than can be undone for quite a while to come. It leaves the grower no fair chance of figuring costs and places the man who this season may have bought early in the position of competing with late bought stock of just as good quality but at a much lower cost. The market of course does not recognize what bulbs cost in the beginning; it simply pays what stock is bringing as cut flowers at the time of sale and that is all that is of interest to the cut flower buyer.

Good stock in chrysanthemums is showing up on the market now and in reasonable quantities, and well-finished blooms are bringing good prices. As usual, we have a set of four good early sorts. There are of course other varieties than I will mention which are done well by one grower or another, but in a general way, outside of

Golden Glow which starts very early and can be drawn out well through the month of October, we have the following generally satisfactory sorts October Frost, Unaka, Marigold and Chrysolora. Ever since the introduction of these different varieties they have been good varieties to depend upon, and give good results from year to year.

The New York market the past week had exceptionally fine blooms of Marigold; great big well-formed, well-colored flowers, and brought attractive prices for the growers. I also noted exceptionally well-grown stock of Unaka in both the New York and Boston markets.

The convention of the Florists' Telegraph Delivery Association to be held in Indianapolis October 12th and 13th will without any question prove again one of the very live conventions of the year. It is to my way of thinking one of the conventions that shows every minute full of action and good work; in fact, there are numbers of florists

who have nothing at all to do with the retail trade who would not miss this convention under any circumstances. Judging from the program as outlined, the two days will be full of important work.

I have been interested in one matter that has come up in connection with the F. T. D. and which is receiving the attention of florists in general, and that is the minimum amount of order that should be handled as a telegraph order. Five to Six Dollars seems to be the minimum amount generally thought advisable, and I believe that it would work to the advantage of all if this amount would be agreed upon, as we all know there are times without number when one flower or another can be bought at such a figure that a creditable funeral piece or box of flowers in some other form can be put out for less than this amount, but there are so many times that it is impossible, so confusion and annoyance will be eliminated if some set figure is agreed upon.

The relaying of messages is another important point. It sometimes happens that in smaller towns, particu-

Chrysolora Chrysanthemum

larly those near to a city, there are no retail florists, but there may be a wholesale florist. Out of town correspondents address a telegram "Leading Florist" and naturally the telegraph operator sends it to the only florist who is known there. Instead of trying to fill this order without having the proper facilities and without being able to do it in an entirely satisfactory manner, this wholesaler would do much better to telephone it to someone he knows nearby where it can be done as it should be. Co-operation in this way will certainly work to the advantage of all.

I find that there is a growing feeling that the coal situation is going to be easier. While some growers have filled right up and laid in their entire supply, there are quite a number who refuse to believe that coal at prices ranging all the way from \$12 to \$18 per ton as we have found it in the East is necessary, and they are holding off with only a moderate amount of their supply laid in and waiting for a break later on, and there seems to be some reason for this belief. As time goes on, reports on the coal situation seem to be more encouraging, and we hope now that all who plan to operate their houses will get all the coal that is needed and without paying the extreme prices that prevailed a while back.

Mr. A. Frank Hills, formerly of Breck's Seed House in Boston, is making many friends in Baltimore, where he is now located with Bolgiano's seed store.

In speaking of Mr. Hill's connection Mr. Bolgiano said, "It is with pleasure and pride that we announce the association of Mr. Hills with our establishment. We know that Mr. Hills will serve our Florists and Flower Loving Friends in the very best way possible and we stand sponsor for his endeavors for their welfare."

Mr. Hills spent his childhood on his father's Flower Seed Farms at Ford Mills, Northumberland, England, and in addition to inheriting a natural love for flowers and plants, he served his apprenticeship in a large seed growing establishment in Europe, he has also materially added to his experience and knowledge by attending several of the large educational institutions in Europe, specializing in Botany and Floriculture.

On coming to America he first associated himself with a New York establishment, he later became connected with several of the New England Seed Houses.

The revised edition of Mr. Hills'

book entitled "Success with House Plants" is universally known and widely read. No doubt Mr. Hills will be of great service to the trade in general for he is always affable, always courteous and always ready to answer all questions either in person, by telephone, or by letter, pertaining to the Flowering Plants, Bulbs, their rearing care and marketing or anything of interest and help to growers of flowers whether Florists, Private Gardeners, Amateurs or Suburbanites.

BOSTON FLORISTS' ASSOCIATION.

The first meeting of the season of the Boston Florists' Association was held at the City Club, Henry, Penn. presiding. Mr. S. E. Blandford, of the R. H. White Company, was the speaker of the evening and gave a good talk on Credits. It proved decidedly interesting to all the members and many valuable points were noted.

The discussion afterwards turned to the National Flower Growers' Association and what that Association intends to do in the way of advertising and pushing flowers before the eyes of the public. The Boston Florists' Association feels that it should attempt to work out in some way a plan whereby the retailers and the wholesalers and commission should do their part in this great work, and a committee was appointed to draw up a plan whereby the necessary money may be secured, working upon a percentage plan if possible. It was the consensus of opinion that if a certain per cent of all the goods bought by the retailer from the wholesaler be set aside, each branch would be doing its full share, and there seems reasonable reason to think that a satisfactory and equitable arrangement may be brought about.

President Philip Breitmeyer of the F. T. D.

NEW ENGLAND GROWERS.

They Have Established Headquarters in Boston.

The New England district of the National Flower Growers' Association is now hard at work getting the Association into working order. Realizing the difficulty of having to depend on a few enthusiastic individuals to carry along the work, they have established an office in the center of the Wholesale Flower District, 32 Otis street, Boston, Mass., and have placed a competent secretary in charge.

The work at present is field work and a call will be made on each grower that can be reached, explaining to him the object of the association and asking him to join. There are over 50 charter members and over 1,500,000 feet of area have already been signed up.

The work of indexing all growers in New England is progressing and following that will be the obtaining of reliable information about every dealer in flowers. This information will only be open to members of the association. It is also intended to establish a full registration bureau for greenhouse help and in many other ways make the association of value to its members.

OCTOBER.

October comes in like a noisy boy with a rustle of leaves and dropping nuts and apples. He goes out like an Eastern Maharajah over a carpet of many colors in royal robes of gold and scarlet. No Quaker lady from the woods of April can stop the Bacchanalian glee in the dance of the leaves or the ripple of the blue water. Dear Mother Nature overflows our cups with her best brand of champagne. Dance, my children, and make happy; the harvest has come. The laborers are in the vineyard, the boys are picking up the apples; Ceres, Pan and Bacchus call us to their worship. It is the very joy time of the year.

Through the long evenings of November we will sit by the fire, take account of the summer, and make our plans for the coming year. But today we cannot dream, or build our castles in Spain; we must be out under October's bright blue skies,—

"So fathomless and pure, as if all loveliest azure things have gone
To heaven that way—the flowers, the
sea—and left their color there
alone."

M. R. CASE,
Hillcrest Gardens, Weston.
October 3, 1920.

DOUBLE VS. SINGLE FLOWERS

Time was when double flowers were considered in every way superior to single ones, says a writer in *Garden Illustrated*. Public opinion has, however, changed within recent years; indeed, some double flowers at one time much appreciated have now almost, if not quite, disappeared from gardens.

Illustrations of such are to be found in the double *Cinerarias*, which, once were thought highly of and realized good prices. Of these I have not seen one for some time.

The Double White *Primula* must have a good constitution to hold its own for so many years without deterioration. The first double-flowered Zonal *Pelargoniums*, sent out about fifty years ago, were of course, rank habit of growth, with comparatively few flowers, but as these few were double they attracted a good deal of attention and sold readily. In time a dwarfier and more free-flowering race was obtained, the members of which were, and still are, grown to a considerable extent, but not in anything like the same numbers as the single ones, which have of late years come prominently to the front for winter blooming.

The double *Camellias*, with their hard and formal flowers, have fallen from the high position they formerly occupied in gardens, but, on the other hand, the single varieties were never so appreciated as they are today. In these the central cluster of golden anthers forms a pleasing feature.

Single roses, too, have made great headway in popular favor within the last few years, but, as happens with all classes of plants that are much admired by the general public, varieties are put into commerce that differ but slightly from each other. The same remark also applies to the double varieties.

Single dahlias, which came forward with a bound about thirty-five years ago, show no signs of ousting the double or semi-double kinds. True, the formal shows and fancies have almost disappeared, but their place has been taken by those of the cactus and paeony flowered sections. The comparatively new collarette group may be regarded as single flowers. Double-flowered fuchsias are still grown, but many prefer the single kinds. At all events, for out-door culture these latter are to be preferred, as the blossoms are less affected by strong winds.

Adam Graham of Cleveland, O., has sold his estate in the Isle of Pines and will spend the winter with his daughters in Florida.

Variation in the quantities of vegetable seeds contained in packets is discussed in the Seed packets World by A. J. B. Bouquet of the Oregon Agricultural College. In a number of tests it was found a great variation existed in the amount of seed contained in packets and also the percentage of germination showed considerable diversity. This condition has been investigated before. Several years ago Canadian officials tested packet seeds from many sources and found variations in quantities for the same varieties among the different seedsmen and also a lack of uniformity in packets put out by the individual seedsmen. A variation of several hundred per cent was found in packets of one variety put out by a single house. This seems to indicate that the cause of this variation is due to carelessness in packing and not to premeditated desire to put out a product lacking in uniformity. It is suggested by this writer that packet standards be adopted by seedsmen. The suggestion is a good one and has many advantages for both seed merchants and consumers.

When the F. T. D. Convention assembles at The F. T. D. Indianapolis next week, it will bring together a representative list of the most active, ambitious, enterprising and successful men in the retail florist business. Moreover, it will be a convention on a purely business basis, with but little time for social amenities, and the program, which will require the closest attention. This program, by the way, has been prepared in such a manner as to cover all the activities of a florists' day, and no session can be missed without loss. Especially valuable, undoubtedly, will be the papers and discussions on credit and bookkeeping systems, for this is an end of the business that a great many florists, especially those who have built up their trade from a small beginning often find themselves most at sea. A workable, and yet simple and complete book keeping system is of the greatest value to a florist.

Another feature of importance will be a discussion of

local advertising, for it is here that many mistakes are also made. Advertising has come to be an indispensable feature in connection with the retailing of flowers, but if the money expended in that way is not to be wasted, something about the principles of advertising must be understood and applied. Moreover, the local advertiser must come to learn the difference between national advertising, which affects the whole trade, and local advertising as it has to do with the sale of his particular goods.

We are glad that Mr. J. Fred Ammann is to talk to the convention about the National Growers' Association and its future policies. There is still considerable misunderstanding about the purposes of this organization, especially in the smaller places, and if the objects of the National Growers in forming an organization of their own is fully set forth and questions which may come from the floor answered, the result will be beneficial for all concerned. There has been considerable speculation as to the exact relation of the growers' organization with the F. T. D. and the S. A. F., and probably Mr. Ammann on this occasion will be able to set everybody right in this respect.

While the stress of circumstances, particularly the lack of labor and the high price of coal, will make it necessary for a number of the smaller florists to suspend operations this winter, all the signs point to good business in general, and a visit to most of the growers shows their houses to be well stocked with plant material. In fact, it has been several years since the growers were so well prepared for the season's trade. Now comes the question, "Will the demand continue heavy enough to take care of all the stock offered?"

The fluctuations in the florist business are always marked, and it is quite possible that there will be difficulty in some sections in taking care of all the flowers, especially those of the more common kinds, unless active measures are taken to stimulate the demand. This leads naturally to the subject of advertising, for it is only by advertising that the demand can be increased or at least sustained. For that reason the necessity of keeping up not only the National advertising campaign but local campaigns carried on by individuals becomes most apparent.

In one way, the industry is becoming stabilized to a greater extent than ever before; in other words, it is being put on a real business basis for the first time. This is a move in the right direction of course, and will show greater improvement as the florists learn the value of co-operation. For a long time they have been inclined to secrecy, and this has not been a good thing for the trade.

One of the greatest opportunities of the newly organized Growers' Association comes in the matter of equalizing the output in different districts. It should be possible to check up fairly well the profits from roses, carnations and other lines, and to make comparative reports; also it should be possible to indicate the probability of a glut in any one line and so help the growers to steer clear of such a difficulty. By this means the florists will not overlap to the extent which is common now, and when they find that a surplus of roses for example is likely to occur, some of them will turn to other flowers in order to keep the market in a more even condition. This is a radical move of course, but it will mean the difference between profit and loss for a great many growers and prove an admirable thing for the trade everywhere, particularly in the way of maintaining prices throughout the season and one season after another.

Flowers Under Glass

There is still time to start a patch of Marguerites in order to have a supply for spring and early summer, when they sell well as bedding plants, and also to be used as window boxes. At Easter time there is also a good sale for Marguerites. You should try to keep the plants growing slowly enough so that they will not have to endure high forcing, which they resent. You can keep them growing along from now on in a temperature of a carnation house.

If you are handling Cypridiums, sponge them occasionally with a weak solution of nicotine or tobacco water so as to keep off the yellow thrip. A little fumigation about once a week will also help to keep down this pest. Cypridiums must have a house where there is a great deal of ventilation, for excess moisture is likely to prove very injurious. Weak liquid manure is a help in making good blooms. Once a week is often enough to apply it, though. These plants like a temperature of 55 to 60. One of the most valuable orchids for the average amateur is Cypridium insignis, which comes in bloom right after the chrysanthemum season. It's one of the very good holiday flowers. Customers who are familiar with its good qualities as a cut flower are sure to demand it. This orchid will often keep over a month in good condition. Remember that your Cypridiums will need no shade from now on. Indeed, shading will tend to make them weak.

Among the Acacias which have been found worthy a place in the florists' plant collection are A. armata, A. cordata, A. grandis, A. heterophylla, and A. lineata. Acacias that were trimmed back last spring and have been planted out of doors during the summer should have made a good growth and be in condition to produce splendid blooms next Easter. They like a temperature of only 40 to 45. Indeed, in some seasons it is often necessary to keep them just a little above the freezing point for a time, because with the increasing heat of spring it is hard to hold them back. Remember that they cannot be forced, but do not let them suffer for

water, and syringe them once or twice a week.

If you have some large tubs of Oleander and Agapanthus, give them a cool shed if there is no room for them in a cool house. Rambler roses should be laid on their sides when the wood is well matured, but there should be a daily syringing from overhead to keep the wood plump.

When sowing cineraria seed, use a well screened compost of new loam and peat or leaf mold in equal parts, with a little sand added. It is important to have the pans well drained. There is no better plan than to use plenty of crock with some sphagnum moss spread on top, and then to fill the pans with compost to within half an inch of the top. Press the soil firmly and have it level. Water thoroughly before sowing the seeds, and cover each pan with a pane of glass after the seeds have gone in. Then place in a cold frame under a heavy shade, the shade to be decreased after the plants are up. When large enough, prick out into other pans or flats, and by the time they have made three or four leaves you can pot them up in 2½ inch pots, using a compost of fibrous loam, three parts, leaf mold and cow manure, one part each, and a little sand in addition.

KERR'S GOOD ADVERTISING

Some of the Secrets of the Success He has Achieved

Kerr, the Florist, of Houston, Texas, has made a wide reputation because of the excellent success of his advertising.

Much of this advertising is prepared by Mr. E. W. Eichlen, the sales manager, and at a recent Southern Convention, Mr. Eichlen outlined some of the principles he follows. He said in part:

"When your advertisement is intended to close the sale of some specified flower, or plant it will be necessary to arouse interest and close the sale through suggestions and a strong appeal to the senses, beauty, quality, form, size, fragrance, color, touch imagination, satisfaction of pride and a fair price appeal. When a motive is formed there is a willingness to buy and it remains only for a clever salesman to close the sale, but, when it is necessary to arouse a motive consider what practical uses your prospects will get with your flowers, and what main motives will make your prospect want your flowers. Vanity and the expression of love and sympathy, I consider the principal motives for the use of flowers. Style and the prestige that goes with it is a valuable advertising point. Let your advertisement fairly bristle with style appeals, make your name so distinctive that its appearance on a corsage bouquet box is evidence of the good-taste and rare judgment of the sender.

"The QUALITY appeal has strength because our stock is perishable and much satisfaction depends upon the freshness and substance of the flowers. It should be every florist's aim to handle flowers of superior merit, and make the fact known.

LOVE, the undefined sentiment, is our most effective appeal. Love of Mother, Sister, Sweetheart or Friend, an affectionate desire to create happiness for them and to apprise them of this desire; what better advertisement of one's love than to "Say It With Flowers"? And so it is with sympathy when flowers inspire hope and banish loneliness. Their proven therapeutic value in the sickroom is food for other thought in the direction of more sales.

"Your firm name, the most valuable asset you have, is your best means of identifying your flowers and the service you advertise. Individuality may be impressed by an attractively designed name plate which must always

be emphasized in your advertising. It must be your personal representative in cold type and should be of distinctive design and easily recognizable. In addition to the national slogan it is well for every florist to adopt a slogan that many people were under the impression that all of our flowers were shipped from Northern markets and were not in fresh condition when sold. We adopted the slogan "Fresh Every Morning," which has appeared during the past two years in nearly one thousand advertisements and over sixty thousand pieces of direct advertising.

it has succeeded in overcoming this erroneous impression.

"Your show windows offer unusual opportunities for converting a little originality and artistic effort into actual sales. While window display should co-ordinate with all advertising, especially newspaper, there should be an element of the new, the unique, to attract attention and create favorable comment. Your window is the guide to the quality of your flowers and other stock and the progressiveness of your establishment. Regular changes with attractive displays and

the use of artistically designed window cards telling your message result in sales that more than offset the effort. The glasses should carry an enlarged name plate near the entrance in gold leaf and a copy of the national slogan in gold script. Cleanliness of interior and exterior is paramount.

"Picture Slide Advertising while of some value is only valuable in accomplishing name publicity. The individual is not in the proper receptive mood for reading advertisements and your message often fails to impress him. Concentration and the appearance of the same message simultaneously in all theatres will give better results.

"Unless advertising is supported by a strong sales and service organization, ready to respond to every call created by advertising, it cannot be expected to produce maximum results. Even a complaint on quality or service may be often turned into a profitable advertisement by a tactful and liberal adjustment. The cut flower box of unusual color and pattern with its attractive tie can create an impression of quality, neatness and painstaking attention to delivery. This may be featured by using a box with stripes of pleasing color contrasted with the body color. Your box should always display your name, address and slogans conspicuously. Delivery tags should also be given this treatment, it is a good idea to print instructions for the proper care of cut flowers and plants on the reverse side, even the card envelope should carry your name.

"We are afforded many opportunities to gain valuable publicity. A bridal window display of a prominent dry goods firm featuring your flowers, a distribution of surplus flowers in hospitals, a complimentary basket of flowers for the opening of a new store or bank, an occasional remembrance of a good customer on proper occasion, the contribution of articles to newspapers, the occasional furnishing of table decorations gratis for club luncheons of which you are a member, these are only a few of the many opportunities that present themselves.

"Your delivery equipment offers another opportunity, your automobile delivery car may be converted into a veritable moving bill board. Besides the name display the national slogan should be emblazoned on the panel. Your equipment is an index to the dependability of your service and should be maintained in the highest standard of appearance and efficiency.

"An electric sign featuring the name and the word, "Florist" near the entrance to your store will attract the transient buyer and identify your establishment. A small sign in the window may be used for special offers or to advertise a special service.

"Back up the F. T. D. for all its worth; it is no longer an experiment, it has made good. What this idea is worth to the florists depends in a great measure upon himself, only by his membership in the F. T. D. and everlasting effort and co-operation in giving publicity to this service can it be developed to its rightful size, you're the doctor."

LANCASTER COUNTY VISITS MARYLAND

Wednesday, Sept. 29, was an ideal day for an ideal trip and at 8 a. m. some 30 machines met in Quarryville the starting point for the trip, others followed a little later so that we had considerably over a hundred individuals making the trip.

After leaving Quarryville the next stopping point was Belair where we met several cars from Chester county and Reading so that we made a good sized party by the time we reached the dahlia fields of Richard Vincent Jr. & Sons Co. of White Marsh, Md.

To those who had never visited the place before this run through the dahlia and canna fields to get to the green houses was a revelation and the Oh's and Ah's of the ladies and the "darn good stuff" of the men was evidence of the pleasure they were having at the beginning of a perfect day.

Parking our machines under the direction of the blue coats, who have a busy day handling the thousands of machines this show brings to the grounds, we first visit the show in the packing sheds, being greeted at the entrance by Mr. Richard Vincent Jr., in person.

This show is such a well known annual feature that it needs no description, expecting to say that it is better every year, the variation in quality always upward has been very rapid in the three years we have visited the show and the perfection of arrangement and display impresses one as being almost impossible of improvement and yet each year it is a new revelation of beauty, showing what can be done with one variety of flower, some greens and the artistic temperament possessed by several of the Vincent boys.

In the green houses are the usual millions of geraniums all sizes with coleus, fuschia, alternanthera, scarlet sage, lantanas and other stock all in good shape, in fact one of our party insisted that he never saw the stock any better than it was right now. In addition to this immense stock of bedding plants there are a number of houses devoted to ferns and palms in

commercial sizes and one sometimes wonders where a market can be found for such quantities of stock.

In the fields are acres of canna and more acres of dahlia all in full bloom and what is more to the point all true to name a fact which is unfortunately not always a fact in the trade. The cannas seem to have enjoyed the rains of the past season and are if anything better than usual. The dahlias not being so partial to rain were just a shade below some former years, looking over the fields and yet in the show the quality of blooms ran a bit higher.

Under the guidance of Mr. Vincent himself who had just returned from the New York show (crowned as I understand with honors and glory enough to make the ordinary man too proud to associate with we men of low estate, but not this man who is a florist through and through) we visited the trial plot and the field of novelties, here of course the center of attraction was the new variety Patrick O'Mara, of which the papers will be full for the next few weeks, but to see its habits and growth it must be seen right here, and I believe that a committee of experts would grade it as high on these two points as they did the flowers in New York. Going up and down the rows in this plot with Mr. Vincent, one soon realizes why he has made such a wonderful success of the dahlia, he is so full of enthusiasm and love for them that they simply have to respond with quality and beauty.

Mrs. Vincent was on hand with her usual hearty welcome for the ladies. During the afternoon our party pulled out at intervals some for a trip through Druid Hill Park of Baltimore and others direct home, all well pleased with the trip, and knowing considerably more about dahlias than they did the day before.

ALBERT M. KERR.

MR. MACKINTOSH IN NEW JERSEY

Dear Sir:—In the last issue of HORTICULTURE, in the editorial "Improvement Needed" you refer to Mr. D. L. Mackintosh as the well-known horticulturist of Stillwater, Minn.

Minnesota, however, can no longer lay claim to Mr. Mackintosh, as he came to the State of New Jersey in July to take charge of the estate of Manuel Rionda "Rio Visto," Alpine, N. J., which under the supervision of Mr. Mackintosh is to be developed into one of the finest country estates in the East.

Incidentally, Mr. Mackintosh also holds the title of Vice-President of the National Association of Gardeners.

M. C. EBEL.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am sure there is no more interesting private estate in New England than that of A. T. Lyman, at Waltham. Not only are the greenhouses filled with well grown and in many instances rare plants, but on the place are probably the oldest greenhouses in America, including one which was built for roses 130 years ago, and a grapery which is almost as old. In both houses the heat was originally provided by flues connected with pits in which wood was burned.

Mr. George F. Stewart, the head gardener, is just the man to have charge of this estate, for he has a genuine fondness for all that is antique and historical, and has taken great delight in getting together all the information

possible about the old greenhouses, the big trees that were planted a hundred years ago, the walks that were laid out with the assistance of George Washington, and the other interesting features of the place. Mr. Stewart has come prominently before the flower loving public during the past year by his remarkable exhibits at Horticultural Hall. Last spring he showed some of the finest calceolarias ever seen in the hall. At a later show he had a magnificent plant of Dipladenia, one of the most magnificent specimens ever shown. In the greenhouse are a number of seedlings from this plant, and it is interesting to note the variations in the color of the flowers.

About the greenhouses are some

very fine specimens of Fuchsia fulgens and heliotrope. At the recent fair in Waltham, Mr. Stewart received prizes for these plants. Visitors who go through the greenhouses have their attention called to a Cherokee rose plant which is over 80 years old, and has a trunk as large as that of a small tree. The branches cover the top of one small section of the greenhouse, and make a wonderful display when in flower. Unfortunately they turn towards the glass so that they are not very readily seen from within the house. As a specimen the plant is remarkable.

In the houses are many plants seldom seen in modern greenhouses, and apparently unknown to some modern gardeners. Yet in many instances they are very well worth cultivating. It is probable that some of them will be on exhibition at coming shows in Horticultural Hall.

There is something of interest all the year round here, but it is when

Campanula Medium

the Camellias bloom, during February and several months following, that the most gorgeous show is made. One house is filled with Camellias of many years' growth, and I doubt if a more complete collection can be found anywhere in New England. I hope that sometime the Gardeners' and Florists' Club of Boston will have a field day at the Lyman estate. If that day should come, every member should make a point to be on hand.

Those who view the heating of a greenhouse with concern should remember that Canterbury Bells make a good show in a cold house in spring. They are not difficult to handle. When planting out Canterbury Bells in the garden in the fall the plants should always be lifted with a good ball of earth. This is rendered easier by giving the plants a good soaking some time earlier.

Mr. J. K. Alexander, the Dahlia man of East Bridgewater, Mass., received much attention from the Springfield newspapers as the result of his exhibit at the Eastern States Exposition recently. Mr. Alexander had four imported varieties and more than five hundred American varieties at the exposition, with 100 square feet devoted to this exhibit. It was twenty-nine years ago that Mr. Alexander set out a few dahlia bulbs, but today he grows more than a million plants.

PHILADELPHIA VISITORS

NATIONAL PUBLICITY CAMPAIGN

We have often had to comment upon attempts made to adapt our slogan, "Say it with Flowers," to other lines of business, but it is rather new to us to hear of anyone using it directly, and changing their business terms to suit the slogan. A printing and stationery concern in Louisville, Ky., which puts out a house organ of rare quality made a "Say it with Flowers" number of its recent issue. Instead, of course, offering flowers, its advertising matter referred to orders as "flowers." A back page devoted to a cartoon carried the slogan prominently, and it appeared on most of the other pages. The substitution of intent was, naturally, obvious, but the slogan, in all the impressiveness of its message, was there the most artful design of a perpetrator could not keep it down.

How many times have we spoken of efforts made to pervert our slogan to other uses? The practice is becoming almost a continual performance. The stage, the press, and devisors of commercial literature are "sitting up o' nights," devising ways and means to pervert the slogan of the florists to their own use—and it can't be done.

Just think, all you florists who have not subscribed to the Campaign Fund, of the value of the slogan established in your interests, and how it is coveted by other lines of trade. And do you not experience a twinge of conscience because you have not helped to establish that slogan, preferring rather that your more generous brother shall pay the bills which have made establishment possible, and, incidentally, raised your industry to prominence in the eyes of the public. In other words, as Mr. Latshaw put it, at the recent Convention in Cleveland, you have allowed yourselves to come in the category of those who "crawl beneath the canvas of the circus tent."

For many weary months these weekly articles have been designed to bring those who have not subscribed to the fund to a sense of duty, not only to themselves, but to their most generous brethren who have made the general acceptance of the message "Say it with Flowers" possible. And we say to these thoughtless ones, that we realize the inattention they have given to this most important movement has not been intentional, that, at heart, they are really good fellows, and will

BOSTON

The Boston Branch of the National Flower Growers' Association has gone out for business in good shape, and should be showing marked results very shortly. As announced last week, headquarters have been established at 32 Otis street in the market district of Boston. A permanent secretary with headquarters at this address has been selected and will be at work among the members from now on. The man chosen, is Mr. George C. Moyse, an active and energetic man with a fine record. Mr. Moyse is 40 years old and has lived in the Waltham and Newton district for the past 30 years. He received his education in the local schools, Northwestern University and Boston University, where he is now taking a course in advertising and business management. For eight years Mr. Moyse was a Commissioned Officer in the National Guard, serving on the Mexican border and in the world war. While with the Yankee Division in France, he was a Company Commander and was promoted to Captain for conspicuous service at Chateau Thierry. At the end of the war he received his discharge with the rank of Major. Mr. Moyse has held several offices, having been an Alderman for two years and a member of the Legislature in 1920. He is a Mason, Odd Fellow and a member of the Knights of Pythias, Waltham Chamber of Commerce and American Legion. He is married and lives with his wife and daughter in Waltham.

At the next meeting of the Gardeners' and Florists' Club of Boston, on October 19, Mr. J. K. M. L. Farquhar will speak on "Impressions of European Horticulture Gained During a Recent Visit." There will be special displays of chrysanthemums, fruits and vegetables.

The Medfield Farms and Greenhouse Co., have been incorporated at Medfield, Mass., with capital fixed at \$150,000. The incorporators are Joel E.,

GEORGE C. MOYSE

THE MARKET

The market has been very dull for the past week. In Massachusetts and some other states the holiday contributed to this condition, and the good weather also figures in it because people who ordinarily would be buying flowers at this season were seeking their pleasure in the country or at least out of doors. Weather conditions have had some effect on the greenhouse stock also, chrysanthemums having suffered both from this cause and also from insects. As a result the bulk of the chrysanthemums offered are in pretty poor shape and prices run low. It is not until the Bonnaffons make their appearance that the mum market really takes proper shape.

Carnations are selling for only 2, 3 and 4c., while roses run from 5c. up according to quality. As a matter of fact, prices for all stocks depend largely upon what the grower can get.

John Smith, of Port Chester, N. Y., has built two new greenhouses to take care of his growing business.

The Travis Flower Garden, Douglas, Ariz. has been succeeded by the Gatliff Flower Shop.

The Nanz Floral Co. recently moved to larger and more convenient quarters on Frederica St., Owensboro, Ky.

INSTRUCTIONS ON GROWING MUMS

The Illinois State Florists' Association are distributing quite a number of Chrysanthemum plants among the children of that state and they have published the following instructions for the benefit of those who are taking advantage of the opportunity to secure the plants:

"When the plant is received, pot it in a 4-inch pot in good, rich soil, and place it where it will receive full sunshine, and when large enough shift into a 6-inch pot, being careful to put in good drainage and to keep it well watered at all times.

"When the plant is about 4 inches

high, pinch out the top, which will make it produce side branches, and when these are about 3 inches long, pinch out the end, and so continue to until August 10, making a bushy, well shaped plant.

"When the flower buds form, pinch off all but the one terminal bud on each branch; this will make better flowers of the ones that are left. When there is danger of frost see that the plants are covered, or in the houses, as a frost would spoil the flowers. After the buds are set a little extra fertilizer will help make better flowers.

"Another plan of growing would be to plant it out in a sunny place in the garden and keep well cultivated, keeping it pinched back and well shaped, same as described, and then about the first of September dig carefully and pot in a 6 or 7-inch pot, being careful to take it up in good shape and keep shaded and sprayed for a few days, when it should again have the full sunshine. If the pots are plunged in soil it will help keep them from drying out. Each plant should be tied to a neat stake with a thread leading to each branch."

In addition to giving away the plants the florists have gone to considerable expense to advertise the fact.

SNAPDRAGONS IN POTS

These, when well grown in pots, are valuable for furnishing, especially during the spring. Last year, having a goodly number of plants from seed sown in January, these were grown in 8-inch pots through the summer, says a writer in Garden Illustrated. When the seed had ripened in the autumn the plants were wintered in a cold house and, when they began to grow in spring, the old stems were removed and the plants given a top dressing of rich soil. When in full growth they were fed with liquid manure. They began to bloom in early May and kept on through the summer. Many of them were from 2 feet to 3 feet high and almost as much across. From these I have had a fine crop of seed. Those needing plants for house or conservatory decoration should grow these from seed, sown in late summer, putting five plants into a 5-inch pot, giving them a place in a light frame or house from which the frost is just excluded through the winter, pinching them at the beginning of the year. When the pots are full of roots put them into 7-inch or 8-inch pots, giving them liberal treatment. I grow nothing but self-colored sorts and medium height kinds.

HORTICULTURE

Vol. XXXII

OCTOBER 16, 1920

No. 16

THE TALK OF THE TRADE

One who watches the carnation market closely cannot fail to notice how often the variety Mrs. C. W. Ward stands as a fancy. Generally speaking, this variety will bring a top notch price when well grown, and a good grower can put a finish on the blooms that makes it class up with Laddie, and outside of this latter sort there is hardly a variety that will beat it. Take for instance this season of the year and the general run of carnations. Both New York and Boston the past week showed Mrs. C. W. Ward of as fine quality as any sort that was offered. It is not often that a carnation will stand out in front for so long a period as this variety.

There seems to be a tendency for Bouvardia to come back into favor. I don't think there has ever been any trouble in selling good cut spikes of this flower, but for a while back only a very small amount was grown. The last few seasons, however, have shown an increase which has been pleasing to the retailers, and I feel safe in saying that the growers are getting a fair

return for their crop. It is not a particularly hard crop to handle.

In addition to the varieties of chrysanthemums which I mentioned last week, namely Golden Glow, October Frost, Unaka, Marigold and Chrysolora, extra good stock of October King and Tints of Gold are appearing, also the beginning of the early pompons and singles, and this latter type is a welcome addition to the retailer. I find that many growers think that under present conditions their margin of profit is much better on these types than on the larger flowered varieties. The question of labor is the all-important point, and there is of course a great saving on the time needed for disbudding and tying up.

The circular issued by the New York Florists' Club pertaining to the National Publicity Campaign must be of interest to everyone who thinks at all about the possibilities of advertising in our business. The National Flower Growers' Association of course is working along the right lines, and that association takes care very nicely of

the growers and the part that they should pay; but the real question seems to be what the retailers should do or what would be a fair basis to work upon. This circular refers to one association which taxes the retail members one-half of one per cent of their gross purchases, these amounts being added to the total when stock is bought from wholesale commission houses, growers direct or in whatever way purchases are made, and that amount in turn turned over to the treasurer of the association. The retailers have not taken kindly to the idea of taxing their gross amount of business on a percentage basis, and it does seem that deducting the percentage from the gross purchases would be more pleasing to them. The money collected is of course for advertising purposes. In one case an association proposes to use 75 per cent for local advertising and 25 per cent for national. Whether these proportions are fair is a matter for the future to decide, but at any rate it isn't far wrong, and there is no question that there must be a different way of collecting the necessary funds for advertising than that which has previously prevailed, namely voluntary contributions. The work being accomplished

A HOUSE OF CARNATIONS

is for the good of everyone connected with the trade and everyone in the trade should do his part.

I have noticed that a lot of retailers take kindly to cut sprays of *Buddleia asiatica*. This I found particularly true through the Middle West and I believe that this flower is well worth a place in every retail store. When well grown it can be cut so as to keep a reasonable time. It is very fragrant but certainly should be grown in a cool temperature. From what I have observed I also favor the growing of this crop in pots. Small stock from early spring propagating will make good flowering stock in 5 inch pots in the fall and winter. This *buddleia* blooms from November 15th on into the middle of January, according to how it is handled, and I am surprised that more is not grown for cut flower purposes. Try it out; you will find that it comes in very handy in the retail trade.

OILED ROADS

Oiled roads are not for our pleasure with horses, but they do help in getting our crops to market, free from the dust of the old highways. Did Robert Browning foresee the beauty of the reflections from their mirrored surface when he wrote, "And straight was a path of gold for him?" Ask yourself that question the next time you are setting your faces westward about five o'clock these October afternoons? We are apt to think of the beauty of the olden days and to feel that modern inventions make life more prosaic, but look at our modern highways, even with "the chariots raging in the streets" as foretold by the old Prophet Nahum, "and justling one against another in the broad ways" and see the flood of golden lights which radiates back from their hard surface and you will say with Browning "And straight was a path of gold for him and the need of a world of men for me."

M. R. CASE

Hillcrest Gardens, Weston, October 10th, 1920.

The directors of the Allied Florists' Association of Chicago have appropriated \$3,500 to open the fall campaign in the first or second week in November with a "Say it with Flowers" week, and elaborate preparations are being made to stimulate public interest.

President Breitmeyer Reelected

Annual Convention of the F. T. D. at Indianapolis— President Breitmeyer's Address

At the Wednesday meeting of the F. T. D. convention at Indianapolis, Philip Breitmeyer of Detroit was unanimously reelected president. Mr. H. T. Dillemath of Toronto was elected first vice-president. Max Schling of New York, H. P. Knoble of Cleveland and Edward Sceery of Paterson, N. J. were made directors. The directors subsequently reelected William L. Rock of Kansas City treasurer and Albert Pochelon of Detroit secretary.

The annual convention of the Florists' Telegraph Delivery Association is being held at Indianapolis as we go to press. The attendance is very large and a great amount of important business is being put through. The address of Pres. Breitmeyer was listened to with greatest attention and pronounced by all present as one of the most masterful efforts of the kind ever made. It was in part as follows:

The President's Address

What has the F. T. D. done for the profession? If it has done more than one thing which stands uppermost for advancement, it has brought about a credit system hardly equalled by any other Association. It is really a grand corporation which can bring about so much progress as this organization has done.

We are very grateful for the co-operation of the leading men in our profession, and I fail to see why some florists ignore the privilege of lending their support and enjoying the spirit of co-operation.

Let us hope that they will awaken, through our efforts and constant endeavor, to the duty they owe to their fellow men, and to the public.

There is no excuse for them now, when one stops to consider that only a few years ago there was a muster organization of fifty seven men, and today we can boast of over seventeen hundred. Have you ever stopped to consider the size of this corporation which you belong to? Do you consider the value of your stock? I doubt it very much if you do. I say to you. No stock holdings in your possession earns such dividends as your investment in the F. T. D.

There is no need for competitive organization. Failure has been the experience of those who have tried this way. Failure because this organization has a parent, honored by our

National Government, and this parent will at all times fill your wants.

I am pleased to say that reports on Service from the smaller towns are most satisfactory, which condition indicates the enterprising spirit of the florist in the smaller towns.

It is the co-operation which can be improved. No place is too small wherever there is a florist, or dealer in flowers. We seek their affiliation, they have as great an advantage as the florist in large cities, in fact more so, because they have seventeen hundred establishments serving them at all times.

Membership

To my mind the membership of the F. T. D. should be unlimited. Every hamlet has a dealer in flowers; I say dealer, because there are many men selling flowers, that have no conception of what brings flowers to life.

They do not know even the first rudiments of the profession, but since there is no distinction in law, we are admitted to be a florist.

It is therefore, the duty of the F. T. D. Florists to educate their brother florist. I have outlined how this can be done.

We have numerous queries, some object to their local florist becoming a member, chiefly for reasons of their own, and unless the objection is well founded, it cannot be heeded.

There are cases where a person may not be worthy of assistance, but usually there is a cure for all ills that exist.

Someone objected to the nationality of a person and stated that in their opinion, the F. T. D. should consist of all Americans. In America this great melting pot, how could anyone be anything else but an American.

Our past experience has taught us that we must make good Americans of all foreign nationalities. It is our duty to make better Americans, as we go along. By kindness, all evil is overcome, and so I say, the F. T. D. stands for advancement, and the day is coming when F. T. D. membership will be 100 per cent American.

I estimate that 1,700 members average 10 orders per month. This totals seventeen thousands orders. Imagine, five thousand members at twenty orders per month, and see the figure. How they accumulate. Ten cyphers would not suffice.

The Flower Shop

The flower shop of today has ad-

vanced, it is not the shop of ten years ago. Have you ever studied the requirements of your shop? Have you taken cognizance of the methods of your competitor? Have you trained your eye to be of service to you, to see that things are done which make for a good condition?

It has been my good fortune to be connected in the selling of flowers for many years and I rejoice in the pleasure it has been for me to watch the developments of this department.

I have noticed with much satisfaction, the improved conditions in the window displays, since the F. T. D. competition has been in vogue. Detroit is proud of having the honor of the first display under the F. T. D. auspices.

F. T. D. window week should be made permanent, and should be followed by all our members throughout the countries, celebrating as it were during assembly week.

Never miss a chance for publicity. One of our stores had a publicity compliment paid to its display of trained animals in our show window. This is worthy of mention because it may be applied in a similar manner. This window was arranged in a grotto effect, having family of alligators and turtles. Mrs. Gray in charge of this store, has christened each one of them, and as they performed acrobatic tricks, they naturally attracted much attention.

A newspaper reporter evidently amused at the display published a story on this splendid display of wild trained animals. Needless to remark, it was good publicity.

Many new features have been added to the flower shop of today which have proven essential and profitable. The sale of articles which can be combined with flowers has advanced and is applied to many of our leading flower shops. To those who are interested I would be glad to give my experience in this line.

I wish to enumerate a few things for action. Refrigeration is fast becoming a problem. We should endeavor to find the most economical methods which can be used in our shops, and here I should like to recommend that an effort be made by the organization to make investigation and report their findings.

Co-operation in Delivery should be given some thought, for surely delivery expense is steadily increasing. Packing materials, especially boxes. Can any method be employed for economy in the use of this article?

A uniform accounting of books especially for F. T. D. members.

Also co-operation with the em-

EDWARD I. FARRINGTON, Editor.

ADVERTISING RATES:

Per inch, 30 inches to page..... \$1.25
 Discount on Contracts for consecutive insertions, as follows:

One month (4 times), 5 per cent.; three months (13 times), 10 per cent.; six months (26 times), 20 per cent.; one year (52 times), 30 per cent.

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

The golf clubs of the country are great users of the finer lawn grasses. They have had to go without these to a large extent the past five years on account of the war. The situation seems a little better this year according to the recent offerings of European houses. But the supply is still very limited on *Poa nemoralis agrostis stolonifera anthoxanthum odoratum* and *Festuca tenuifolia*, so that all the big houses are busy picking up all they can capture on these items as offered.

More and more are florists the country over realizing the benefits of organization, not only in a National way but also in the local field. Chicago has been the leader in this respect and has gained an international reputation because of the way in which its florists have gotten together. It is interesting to find that the florists of New York are at last falling into line with a broad-gauged plan for co-operative work. As President A. M. Henshaw of the New York Florists' Club says in a circular which he is distributing widely, "The florists in and around New York have been criticized on account of their seeming indifference to any movement which is likely to benefit the trade." There has been a general impression that the New York florists for various reasons would not get together for a united stand. It seems, however, that it only needed a certain amount of prodding to bring about a general appreciation of the fact that New York was hurting itself or was being harmed by such criticism. The result is shown in the decision of the New York Florists' Club to attempt a general getting together plan. It remains to be seen whether there will be a general response to Pres. Henshaw's appeal to the members of the five associations

which include the bulk of the growers, wholesalers and retailers to get together and give the whole question a thorough consideration at an early date.

It is not to be expected that any movement of this kind will go forward without a certain number of hitches. Many viewpoints will have to be considered and there will have to be a well developed give-and-take spirit to result in the best good for all. We believe, however, that the New York growers are capable of getting together on the proper basis and that they will do so.

It is interesting to find in this connection that the movement has taken shape on the Pacific coast and that the San Francisco florists have already formed an association which includes every florist in the city except one. Already important results are seen in an arrangement for closing the stores half the day on Sundays with the expectation that complete Sunday closing will follow. Truly, the spirit of co-operation is in the air and every part of the country is certain to feel it sooner or later.

There never was a more businesslike or more successful convention of florists than that of the F. T. D., held in Indianapolis the past week. As was expected,

the attendance was large and the interest keen. Florists the country over are beginning to realize this association is of incalculable value to them in the furthering of their business interests. It serves as a medium for co-operation and exchange such as could not be obtained any other way. It was a well deserved tribute to Mr. Philip Breitmeyer, as he was re-elected. President Breitmeyer is an exceedingly able official, and seldom has a busy florist been found who would devote much time, energy and concentrated thinking to the advancement of the association. His address made at Indianapolis was one of the best efforts of the kind ever heard at a florists' convention anywhere. This was the frank opinion of those present. Mr. Breitmeyer covered the entire range of the association's activities and put his finger on the most important matters which needed attention. There is no question but what he is right when he says that there is greater need for active co-operation. If there is one place where florists make a mistake it is in failing to realize the extent to which they are bound together by the nature of the business in which they are engaged. Of course each individual store must make its special appeal and there will be constant competition, but in the nature of events the demand for flowers must be built up by the united efforts of all concerned. No florist with a proper appreciation of an honorable method of doing business can be content to sit back and enjoy the fruits of his fellow workers' campaign without doing something on his own part to insure the success of these campaigns.

President Breitmeyer's whole address was full of important suggestions and meaty statements. It is well worth a careful reading and a deep pondering. The F. T. D. goes forward for the next year with a brilliant set of officers and should prosper as never before.

Flowers Under Glass

This is a good time to make cuttings of begonias of the semper florens class in order to have four-inch begonias next spring. Most of the Rex and the flowering begonias can be propagated at many seasons, but this seems to be the most convenient time in which to work up a supply. From now on we can rely on steady bottom heat, which is an important factor. There is some difference with certain of the shrubby begonias which furnish the best cuttings in early spring.

It is important to give the roses a good syringing at least once a week, even though they may be growing freely and seem to be free from disease. Spider is very likely to creep in and do damage if the plants are not watched, and it works so insidiously that it often spreads badly before it is discovered. As all rose growers know, it is a difficult matter to clean out spiders at this season, with the winter months coming on. It is best to syringe quickly at a high pressure in order to avoid using any more water than is necessary. The less water around the houses at this season the better. Still, it is necessary to get into all the corners and especially around the braces. After you have syringed the benches go over them and shake the plants as much as you can without taking too much time, as this helps to have them dry off well before nightfall. Of course, you will not neglect lime, which is very necessary. You will find it necessary to carry a little more air than usual at night after syringing as this will help to dry out the house again.

How are you fixed for manure? With the growing scarcity it is a good plan to buy it here and there, whenever the opportunity offers. You can hardly get too much, and if your supply is exhausted too soon it may prove a serious matter for you. It's a fine plan to have a concrete platform with drainage into a manure tank or cistern, but if this arrangement is not possible you should be careful to pile the manure in square heaps not too high, and placed where it can be turned readily at intervals. It doesn't do any harm to have a little straw in

the manure, but it must not be too coarse. Sometimes when florists get their manure from dairymen they can get the latter to cut their bedding short, which makes it better for the greenhouses. Of course, you will watch the piles carefully to see that the manure does not burn, which it is very apt to do if piled high, and not kept wet. After having burned it is of little value. Sometimes a good wetting down is imperative, but should be avoided unless the manure shows signs of heat.

It is a good time now to get together such supplies as a florist is likely to need during the winter. Probably it will be easier to get deliveries now than later on. This includes moss, wire designs, ribbons and the like.

Lomarias with proper treatment are quite useful for general house decoration. They can be grown into attractive miniature tree ferns, and when young make good center pieces for the table. After the plants become large and pot bound they can be root pruned and put back into the same size pots. Then they will make a new set of roots, and with a little bottom heat will make a new crown. Lomarias are readily raised from spores sown in shallow pans or boxes and kept in a temperature of 70 to 75 degrees in a close atmosphere and well shaded from the sun. It is best to use fine peaty soil or leaf mold, with some silver sand added. When the plants are large enough to handle transfer them to fresh soil and keep them at a night temperature of 60 to 65. When they have produced two or three upright fronds they can be put into thumb pots in a soil of one-half loam and one-half peat or leaf mold, with a little sharp sand. Pot them as needed so as keep them moving. Lomaria Gibba and intermedia are the best varieties.

PRICES FOR 1921

Although labor costs have not decreased it would seem that "the peak" of prices has been reached, if not already passed; and those who are interested in making prices on flower stocks of various kinds should remember this and not advance prices except where clearly justified. We are pleased to note that flower growers are, in the main, entirely reasonable in this respect, and but few things have been advanced for the coming season, whereas many things have been reduced in price with the general average holding about steady.—

George Watson's Corner

"You in your small corner and me
in mine."

Chas. Sim went to the Bryn Mawr Hospital on the 8th inst. Eye trouble. He expects to be there until the 15th inst.

The first cuts of pink chrysanthemums appeared in the market on the 5th inst. These were sent in by George Didden at Hatboro. The variety was Unaka and were very creditable specimens. George Auegle our live commission man had no trouble in selling these to his next door neighbor Pennock Bros. These live wires are always on the lookout for the latest and best and never allow any of the lesser lights to get a show if they can help it.

Our old friend Charles L. Seybold, park superintendent of Wilkes-Barre must be a busy man these days, looking after old parks and making new ones. We quote the following interesting editorial from the Philadelphia Record:

It is a rather curious coincidence that there appeared in Sunday's "Record" two interesting stories regarding Wilkes-Barre—one, profusely illustrated, laying emphasis upon the beautiful parks developed by the Luzerne capital, and the other, a news report, stating that a local millionaire, Fred M. Kirby, after whom it is proposed to name a fine community park, intended to reciprocate by giving \$250,000 as a fund for the proper maintenance of this pleasure ground. Thus we see how civic virtue is its own reward. Wilkes-Barre, a notably progressive city and finely located on the Susquehanna, has spent its money freely in providing attractive parks for its people. Now some of this comes back to it through the enterprise and public spirit of one of its own citizens, who will give a new impetus to the movement. The incident is one which is commended to the attention of other millionaires who may be desirous of leaving some memorial of themselves. There can be no better one than a handsome park, which will endure for centuries to come.

All of which is very true and very well put and we pass same along to a wider field than the local paper covers.

The passing of J. R. Johnston, Oct.

8th, takes a unique personality from the glass world. For over a quarter of a century he has dominated the business of manufacturing window glass all over the United States and in many foreign countries. He was the forward spirit for countless factories and was ever in the lead for new and better business. And as an entertainer at social functions of the trade he was first, last and all the time, head cook and bottle washer. He did all the thinking and planning and all the rest of the multitude had to do was to come along to conventions and

picnics and outings and enjoy themselves. They knew that if Johnston was handling it, nothing would be left undone—and that there would be refreshing novelty, and genuine enthusiasm all along the line. A wonderful spirit was J. R. Johnston—and few of us will ever look on his like again.

Chas. A. Woodman has purchased the business of A. C. Eastwood, Florist, Alliance, O., and will conduct business under the name of Woodman's Flower Shop.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

This has been a wonderful season for dahlias. As I write this the plants in my garden are still blooming in spite of several rather cold nights. There never has been a year, I think, when there have been so many dahlia shows or when they have been so largely attended. An interesting feature of the present era of dahlia enthusiasm is the tendency on the part of growers to specialize. This tendency, I think, will grow because of the great diversity in the different types and the difficulty which any amateur has in keeping track of the varieties when growing all the different forms. Of course, the cactus dahlias have a tremendous number of devotees, but I find the peony flowered and single dahlias very high in favor. There is a constant turning towards single varie-

ties in all classes of flowers so that I look for a much greater development among single dahlias and those of the collarette type than has been seen up to the present time.

One is almost overwhelmed when confronted with the constantly growing lists of varieties. It is obvious that some sort of process must be put into operation that will limit the number and make selections of the very best. Looking back through dahlia literature we find that this flower is quite a modern introduction when compared with other favorite flowers, like the carnation and the tulip. Still, if you go back early in the century you will find that dahlias were then grown in considerable numbers. The Annual Dahlia Register, an old English publi-

cation dated 1836, mentions at least 750 varieties. According to a writer in the *Gardeners' Chronicle* (English) the pompom dahlia was first introduced in 1850 by growers in Germany, from which country large numbers were sent to England. I understand that there is discussion in England about attempting to make a complete alphabetical list of dahlia names, past as well as present. It is hard to see what actual good would be accomplished, and yet such a list would be interesting. At the same time it is pretty safe to say that the compiler would be going dangerously far if he labeled a list complete even after having gathered together every name which he could find in catalogues ancient and modern.

The multiplicity of names and varieties is a matter which affects all classes of popular plants. This is especially true of roses, and I am interested to find that the matter is being taken up in Europe in much the same way as in this country. Prom-

inent rosarians over there are appealing for a national rose garden in which complete tests might be made. As Walter Easlea points out, there is danger of losing many good varieties by the influx of so many often worthless novelties. Writing in one of the English papers, Mr. Easlea says: "I used to believe that a national rose garden should be established after the manner of Kew Gardens, but the less we have of bureaucratic control the better for all. Nor do we want any special society to manage the garden. Let it be truly national, and maintained by all true lovers of roses. Such a garden as I have in mind would contain every variety procurable, and every method of cultivation would be demonstrated. The task of collecting the roses would be a heavy one, but it would be worthwhile."

People are easily misled in their judgment of flowers, because of the conditions under which the flowers are grown. Thus a writer in one of the papers describes the flowers of Dorothy Perkins as a sharp, acrid yellow pink. Evidently the writer had seen poorly grown specimens, for at their worst Dorothy Perkins sometimes does approximate the description given. Of course, Dorothy Perkins, with even a fair show, makes a very different appearance, being one of the handsomest roses we have, as well as one of the most attractive. Probably one reason why amateurs get poor results from climbing roses is because they try to have them make too much growth the first year instead of cutting them back sharply as they should do when they are set out.

GENERAL NEWS NOTES

Walter S. Schell, the seedman of Harrisburg, Pa., who recently purchased the three story building at Tenth and Market streets, has announced plans of incorporation. He expects to incorporate for \$200,000, and have a profit sharing plan in which the employees will participate. This corporation will include J. C. Stevens, C. M. Storey and J. W. Yeakle.

Park Commissioner James B. Shea, of Boston, has opened bids for extensive improvements on Boston Common and the Public Gardens. More than \$70,000 will be expended, and this will include a large amount for bulbs to flower next spring.

The American Legion, at its recent convention in Cleveland, agreed to adopt the red poppy as its official flower, and urges its members to wear it on Armistice Day as a memorial to their buddies who made the supreme sacrifice.

Be sure and get Meyer Threads and take no other.

Little Talks on Advertising

Randall-McLoughlin, the Seattle seedsmen, use very good taste in their newspaper advertising. While they do not indulge in very large space, they make it count by a display which is sure to attract the eye. At the top of their single column advertisement they have a small picture of tulips, with the words: "Holland bulbs for fall planting," in heavy black type printed across the cut.

The ad then goes on to say: "The greatest stock of genuine Holland bulbs ever seen in Seattle is now in transit and will be on show in about a week's time. The shipment includes hyacinths, tulips, daffodils and freesias, all of No. 1 size and of first-class stock. This is your chance to get the kind and quality of bulbs you have always wanted." It seems to me that this direct appeal concentrating on one subject and presenting it in such an attractive way, is bound to bring results in increased sales, which of course, is what all advertisers are looking for.

A number of Western florists and seedsmen are thoughtful advertisers. Young & Lester, of Walla Walla, while also using small place, use it to advantage. They make a very good suggestion in one of their advertisements

when they say: "There are so many beautiful blooms selection is really bewildering. Let us help you make up a bouquet or garner a gathering of cut flowers rich in color and fragrance. Tell us the occasion and we will choose rightly for you." It seems to me that this offer of assistance is likely to find a response from the readers of the advertisement.

As is naturally to be expected by everybody acquainted with the Hollywood Gardens, of Seattle, and the tremendous business done by this concern, its advertising is well handled. These florists are steady advertisers, and consequently are concerned more particularly in keeping their name always before the public. When occasion demands, they advertise special flowers, but as a rule are looking for general publicity more than anything else. One of their most tastefully prepared advertisements is two columns wide and has a pen and ink sketch of the Hollywood Store at the top. Underneath in large black type are the words: "Flowers for every occasion," and a little more text to amplify this announcement. The advertisement depends largely, however, on the amount of white space used for its effectiveness. Every successful advertiser knows that white space with a message set in the center or at one side is especially forceful. At the same time the message itself must be worthwhile to gain a hearing. It seems to me that the Hollywood Gardens might well use the slogan: "Say it with Flowers" which for some reason they seem to neglect.

WINTER COURSES AT CORNELL UNIVERSITY

The New York State College of Agriculture at Cornell University is prepared this winter to offer exceptional advantages to young men and women who are to make flower growing their life work. The short winter course which opens November 10, and continues until February 18, is planned primarily to benefit those who are to engage in the work commercially. At the present time there is keen competition among florists and progressive young men realize that they must equip themselves with all the information possible if they are to make a success of the business.

Two courses are offered for those students especially interested in commercial cut-flower and plant production. The first is "Commercial Floriculture and Greenhouse Practice," and in this course a study is made of methods of growing standard florists' crops; the second is a course in "Commercial Greenhouse and Conservatory Construction and Heating." In addition to the courses mentioned Agricultural Chemistry, Soils, Plant Diseases and Injurious Insects are required subjects and the student may elect Gardening and Garden Flowers, Landscape Planning and Planting, or Plant Breeding.

Upon the satisfactory completion of the courses and after a student has subsequently spent a year in practical work, the college grants a certificate of proficiency on the approval of the Professor in charge of the course and the proprietor of the establishment in which the student has been employed.

During the coming winter it is planned to have a series of lectures by some of the best men in the country who are engaged in successful flower production. This is an opportunity American young men should not miss and there should be a large registration at least of sons of men already engaged in flower production.

A booklet descriptive of all courses given during the winter in the short session of the College of Agriculture will be sent upon request by the Secretary of Cornell University, Ithaca, N. Y.

MORE ABOUT THE ROSE MIDGE

The rose midge (*Dasyura Rhodophaga* Coq.) may be present in the greenhouse all the year, but there are only one or two seasons when serious damage is done, namely, in the spring during the latter part of May to early July, when about half the buds are damaged and in the fall—early September to November 1, when the entire crop of buds will be damaged.

The adult is a small fly. The larvae or maggots do the damage and the venerable point in the life-history is when they go into the ground to pupate. If you will cover the soil of your rose beds with tobacco dust it will kill the larvae as they are going into the ground to pupate.

In addition to this you should fumigate your rose houses every night for a period of four weeks at least with tobacco fumes in order to kill the adults before they lay eggs. Persistent work will soon eradicate the insect from your houses.

If the walks and under the benches in your houses are earth, you should spray them with a 10 per cent kerosene emulsion to kill the larvae that enter the soil for pupating.

P. T. B.

IRIS SIBERICA

Iris Siberica or the Siberian Iris is one of the most valuable of the Irises for the garden. It blossoms in late June and early July, giving flowers at a time when very few flowers appear in the hardy garden. It seems equally adapted to both dry and moist places; growing strong and healthy in a very heavy soil, and doing equally well in light sandy loam. The variety Siberica which is a very deep blue or rich purple, which is illustrated, was photographed July 1st, at which time my Siberian Irises were very good. The best time to plant this species is in the Fall, during August, September and October, planting roots between two and three inches deep. Cultivation is the principal requirement, although fertilization adds to the size of the plant, which in turn gives you larger and better quality flowers. Any well decayed dressing is good, and can be applied anytime throughout their growing season. The best time to fertilize, is when you are preparing your soil to plant them, or early in the Spring, when cultivation should be commenced.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best test by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

S. A. F. & O. H. Department

Complying with the request of President A. L. Miller, there was a meeting of the Finance and Audit Committee at the Claypool Hotel, Indianapolis, Sunday, October 10th. Present: A. L. Miller, president; John Young, secretary; J. J. Hess, treasurer; Herman Knoble, chairman of the finance and audit committee; C. C. Pollworth and Joseph Manda. President-elect Thomas Roland was also present and was greatly interested in the proceedings.

Conditions governing the different funds of the society were given careful consideration. The treasurer reported that there was a balance in the permanent fund of about \$11,000 which should be invested at once and as the investments of the society are now made by the finance and audit committee subject to the approval of the executive board, the matter of investing this fund was referred to them for recommendation. The permanent fund at present amounts to almost \$50,000.

The cost of publishing the Journal of the society was also discussed. It was the opinion of the officers that owing to the high cost of paper and labor in connection with this publication, it would be unwise to continue the publishing of same unless there was a more generous support given to it by advertisers, so that it would become self-supporting. Much of the news in the Journal had already been published in the trade papers and as those papers had always published items of interest to the society in the past, would no doubt be pleased to continue to do so in the future. The officers' recommendation would be to discontinue same after the end of the year.

The supplementary reports of the secretary and treasurer showed that the financial condition of the society was very satisfactory. It was also decided that the \$10,000 loan which was authorized by a unanimous vote of the convention held in Cleveland last August to be made from the permanent fund would not be required at this time. Recommendations were made that a more modern method of keeping the records in the offices of the secretary and treasurer be installed.

McHUTCHISON & CO. 85 Chambers St.
NEW YORK

Hotel, Indianapolis on Monday, October 11th. Present: Henry Penn, chairman; Fred Ammann, George Asmus, C. C. Pollworth, Major P. F. O'Keefe; John Young, secretary; J. J. Hess, treasurer, and Herman Knoble, chairman of the finance and audit committee.

The secretary submitted a financial report up to October 1st, 1920. This report showed that there was still many outstanding subscriptions amounting to about \$10,000. The Secretary was given further instructions as to the collection of these accounts; the general opinion seemed to be that all of these subscriptions would be forthcoming at once when the delinquents were notified of their indebtedness. George Asmus submitted a detailed report as to the sales of the slogan signs; that it was the intention of the Committee to take the matter up at the meeting of the F. T. D. later in the week, when it was expected that all of these signs would be disposed of. A lengthy discussion took place in regard to providing ways and means of continuing the National Publicity advertising. Several methods were suggested for raising funds. It was finally decided to continue an intense campaign along the same lines under which we are operating at present.

The most important business of the meeting was the consideration of someone competent to tour the country, visiting the large centers for the purpose of organizing the allied interests along similar lines to that which is being done in the large cities of the West. Finally, Mr. J. Fred Ammann, who had already made arrangements to visit these large centers for the purpose of organizing the growers, consented to do the work as outlined above for the National Publicity Campaign. The committee considered that they were very fortunate in obtaining the services of Mr. Ammann to do this important work, and if successful in organizing the different interests in the large centers, the question of raising funds for the National Publicity Campaign will be solved. It was also decided that the Publicity Committee should hold monthly meetings if possible. The work was becoming more important from day to day and would require that they get together more frequently to discuss the different problems that come up and require prompt attention.

JOHN YOUNG, Secy.

ALTON FLORAL SHOP TAKEN OVER BY MISS WILLIS

Miss Marie Willis will take over the management of the Alton Floral Company on Friday, Oct. 1, while George Madsen, who has been owner of the store, will go into the wholesale business, selling plants and flowers from his hot-houses at Godfrey.

The Alton Floral Company was opened up thirteen years ago and has done a very fine business. During the greater part of the time since the store was opened Miss Willis has been chief assistant, and is known to all patrons of the store. Friends are hoping for Miss Willis' continued success in her business and a steady growth in the trade.—*Alton, Ill., Telegraph.*

BULBS FOR WESTERN NEW YORK

In the tow of the tug E. W. Sutton, Jr., the barge Annie L. Ward passed through Lockport for Buffalo bearing a half million spring flower bulbs from the land of tulips—Holland. In the barge are tulips, hyacinths, narcissi, daffodils and jonquils, all consigned to Buffalo florists. The cargo came from New York City where

the original shipment on Dutch boats contained about three hundred million bulbs, it is said. Western New York is one of the largest buyers of bulbs, according to the men in charge of the cargo.—*Lockport (N. Y.) Journal.*

MICHAEL H. NORTON DEAD.

A Former President of the S. A. F. and of the Massachusetts Horticultural Society.

Although Michael H. Norton has not been very prominent in the florist world the past few years owing to advanced age and illness, there was a time when he was one of the leading figures in the Society of American Florists, serving as president for one year, being elected in 1891 at the convention held in Toronto. The host of friends possessed by Mr. Norton throughout the country will be pained to hear of his death, which occurred a few days ago at his home on Westbourne street, Milton, Mass., a suburb of Boston.

Mr. Norton was interested in all horticultural matters as well as in the florist business, and served one term as president of the Massachusetts Horticultural Society. He was an energetic, amiable and conscientious official, one who stood high in the esteem of all who knew him.

Mr. Norton was 75 years old, a native of Boston, and was educated in Boston public schools. For many years he was a resident of Dorchester. Previous to his retirement he was in the florist business on Berkeley street, Boston, and was a recognized expert on rose culture. He married Agnes T. Lennon. She died some years ago. Two sons, Arthur Norton of Buffalo and A. J. Norton of Providence, and three daughters, Claire, Madeline and Alice Norton, survive him. His daughters lived with him at his Milton home.

CAMBRIDGE, MASS., FLORIST KILLED

Patrick J. Shea, a florist, living at 109 Ellery street, Cambridge, Mass., while bicycling home from his work near the Mt. Auburn Cemetery was run down in front of 182 Brattle street by an automobile and fatally injured. He died shortly after of a fractured skull at the Cambridge Hospital. Mr. Shea was in his 50th year.

NEW OFFICERS OF MASSACHUSETTS HORTICULTURAL SOCIETY.

The nominating committee of the Massachusetts Horticultural Society has announced the following list of nominations for the various offices of the society to be filled at the annual meeting, Nov. 13: President, Albert C. Burrage; vice-president for two

THE TALK OF THE TRADE

It is interesting to study the ramifications of the florist business: A few days ago I was talking with Mr. Charles Stilphen, who is located at North Conway, N. H., and does a business which is confined almost exclusively to the summer months. Mr. Stilphen has stands at several of the mountain hotels, from which most of his flowers are sold. He said that trade began to increase last year and this season has been remarkably good. The guests have kept their rooms filled with flowers, and some of them have bought flowers for the tables, the hotel managements not providing any table decorations this year. Most of Mr. Stilphen's flowers have been annuals, as they seem to please the summer visitors better, he says, than greenhouse products. Sweet peas, of course, are the main standby and flourish well in the New Hampshire climate. They start to bloom in early July and keep on flowering until October. Bachelor Buttons and yellow Centaureas, gladioli and dahlias are among the other flowers which find appreciation.

Have you read President Breitmeyer's address at the F. T. D. meeting at Indianapolis? If you haven't, whether you are retailer, wholesaler, grower or identified in any way with the florist industry, you can well afford to carefully follow what President Breitmeyer said before that convention. As I have said in previous notes, this was one of the live conventions of the year and it will take a good one to beat it, while President Breitmeyer's address is about as able a paper as I have had the pleasure reading in a long while.

A number of times I have been asked about Mr. Strout's new carnation, Maine Sunshine. The question put to me very often is, "What about the color at night; does it show yellow?" I think anyone who has had the opportunity of seeing flowers of Maine Sunshine on the bench under artificial light would agree with me that it positively does show a good yellow shade and it doesn't need any

striping or marking to bring it out, as has been the case with a number of yellow varieties in former years.

Mr. Strout showed two nice vases of Maine Sunshine at the meeting of the Gardeners' and Florists' Club of Boston last Tuesday night, and the flowers certainly were in very fine shape for this season of the year. When you consider the parentage of this carnation, you can't help but think it has a future as a commercial variety. Mrs. C. W. Ward and Crystal White carry

breeding of a top notch line of carnations.

And that reminds me again that when you get ready to look for fancy carnations, in spite of the fact that Mrs. C. W. Ward is a variety of quite a number of years back, you can always place that sort in the list of fancy blooms, whether it be on the exhibition table or in the wholesale market.

Every spring there is a strong call for cuttings and small plants of dou-

Davidia Involucrata

ble petunias. The call in the retail trade for pot plants of double petunias is steady, and there is no question that good varieties are about as satisfactory as any pot plant the retail customer can buy. We see a plenty of geraniums, heliotrope, fuchsias and plants of that kind, but the florist who selects his double petunia plants can work up a range of colors that will give entire satisfaction. It isn't too late now to get some of your stock plants of better colors and forms in the houses so that you can carry them along for propagating purposes in the spring. Watch out for any good ones that you may have as they will prove valuable.

The experience of quite a number of florists last year with stock of Golden Glow leaves them where it will be necessary to save stock plants in quantity for this year's propagation, and I can't see why a chrysanthemum grower will put a variety like Golden Glow in particular out of doors in cold frames and try to carry it through with the idea of successful propagation. Of course last year was an exception and this stock which was held dark for a long period covered up heavily with snow, and it being necessary to leave it there until way into the spring, turned out a heavy loss, and it will every winter under similar conditions. There are quite a number of varieties that will stand carrying over out of doors under cold frames or light protection, but Golden Glow in particular and some other tender sorts should be kept in the houses and given a chance to turn out good healthy cuttings at a time when you want them. A few plants well taken care of inside are worth much more than a big block out of doors.

The vase of Oconto chrysanthemum shown by W. W. Edgar Co. of the Gardners' Florists' Club of Boston this week was especially good. Well grown blooms of this sort are hard to beat at this season of the year. W. H. Golby showed one plant of the new chrysanthemum, Henri Vincent. This was introduced by the Chas. H. Totty Co. last year and recommended as an early pink, not particularly for single blooms but one to grow for profit, four or more flowers to the plant, and I believe that it is a pink which all commercial growers should look into. I believe it is better than Pacific Supreme, Unaka or Rosiere, and it comes into flower at very near the same time as these varieties. It is a type which will bear growing several blooms to the plant and give a better margin that way than if grown only one or two.

Europe Through American Eyes

Mr. John Farquhar Talks to the Gardeners' and Florists' Club of Boston

A largely attended meeting of the club was held Tuesday evening, Oct. 19th, President Bartsch presiding. There were seven new members elected.

Resolutions on the death of David Weir were read, and a copy ordered sent to the family.

The exhibition tables were well filled, and the following awards were made:

Collection of gardenias, cyclamen, dracaenas, pandanus, crotons and cherries, Wollrath & Sons, Waltham, honorable mention.

Chrysanthemum Oconto, Wm. W. Edgar Co., Waverley, honorable mention. Mr. Bartsch said that Oconto was a good follower of Early Frost, and he considered it a very good commercial, every day flower.

Vase of double flowered cosmos, Kenneth Finlayson, Brookline, vote of thanks.

Collection of apples, A. K. Rogers, Readville, report of merit.

Collection of primulinus hybrids, nerines, crabapples, etc., W. N. Craig, Faulkner Farm, Brookline, honorable mention.

Collection of cut flowers, zinnias, chrysanthemums, etc., W. H. Golby, Jamaica Plain, vote of thanks.

Vases of carnations, including Maine Sunshine, Mrs. C. W. Ward, Ruth Baur, Crystal White, C. S. Strout, Biddeford, Maine, honorable mention.

Mr. Farquhar's Address

Mr. J. K. M. L. Farquhar was then introduced and gave his impression of conditions as he found them in Europe. He said that he had last visited Europe seven years ago and from reports had feared that horticulture would be decadent because of the stress of circumstances due to the war in Europe and because of the scarcity of men and money to gratify the old love for horticulture of the people of that continent.

He said that he was surprised, however, at what he observed in all the countries he visited. Horticulture is not decadent; the love of it is too deeply fixed in the hearts of all Europeans, and in spite of all sorts of adversity, horticulture will go on. Mr. Farquhar found traveling conditions

very hard and it was difficult to get return passage. In Paris, Mr. Farquhar observed on August first that the horse chestnut trees were leafless, which he laid to the poor condition of the soil rather than any form of blight.

He observed in Northern Europe that everybody is fond of vari-colored foliage plants, and thought this was due to the fact that so little sun caused the people to turn to these

J. K. M. L. FARQUHAR

plants for the colors they displayed. *Taxus baccata* was largely used for ground covers through these countries.

Mr. Farquhar visited many of the interesting gardens of Paris, including the famous rose garden of Mons. Jules Gravereaux, where there are seventeen hundred varieties to be seen.

Mr. Farquhar took his listeners delightfully through the various cities of France, mentioning in particular Orleans, the city of Joan of Arc, where the largest nurseries in France are located. Here it is lamentable to see hundreds of thousands of shrubs grown particularly for the American market going to the bonfires on account of Quarantine No. 37. Here he saw hundreds of thousands of *Spiraea*, *Wiegela*, *Hydrangea paniculata*, etc., shrubs which American nurserymen use in such quantities. The same condition exists in all the larger nurseries in France. There is no market for this stock, as it was grown especially for American consumers. Large seed

establishments and nurseries are also located in the city of Tours.

By far the greatest thing in France is the spirit of the French women. They work from early morning to dusk and bumper crops were being harvested while he was there.

Mr. Farquhar had the pleasure of seeing *Davidia involucrata* in flower for the first time while visiting Orleans. (See illustration on page 305). The tree, about eighteen feet high, was hung with white flowers that resembled pieces of ribbon about 6 or 8 inches long, a very peculiar flower.

He also said that where specimen trees were the rule in this country, whole groups of one kind of tree were the rule in France, such as larches, beeches, etc. Ground that was formerly cultivated is now covered with rank growth in many places and what was formerly pasture land has been plowed and planted and this virgin land is producing wonderful crops.

At Brussels, he found the people as gay and light-hearted as before the war, and where wine was only served at night in pre-war times, it was now to be seen at every table at noon.

From Brussels, Mr. Farquhar went to Holland and said that the Boskoop nurserymen are now negotiating with the authorities at Washington to see if they cannot arrange to have a building where plants may be examined. The bulb situation is quite in accord with previous reports printed in *Horticulture*. The Hollanders are charging such exorbitant prices for bulbs that while they have not sold as many as formerly they have received more money than any previous year.

They are not selling any to Russia, Germany does not buy any, Scandinavia has purchased quite a few, while England has bought about half her usual quantity. It is expected that next year the bulb syndicate will be broken up and that prices will be lower.

Some very good bulbs, especially narcissus, are being grown in England. They are not as large as the Holland grown but very fine. England is also growing some tulips as good as anything seen in Holland. The only trouble is that the English cannot make a steady business of it.

While in England, Mr. Farquhar visited Kew and all the famous estates, in company with Mr. E. H. Wilson prior to the latter's departure for India. In one English garden there were over two thousand varieties of rhododendrons.

At the close of his lecture, Mr. Farquhar was given a rising vote of thanks.

Mr. Strout of Biddeford, Me., gave

PRIMULA TOWNSENDII, our selected strain, out of 3 inch, ready for 4½-5 inch pots, \$15 per 100.

There is every indication that the Dutch Surplus Bulbs bulb growers will have a great number of surplus bulbs to dispose of in the United States this season. With conditions as they are now, these bulbs will be sold, apparently, at any price which will turn them into cash. It is obvious that this sort of dumping of bulbs into American trade channels is a bad proposition for American business men engaged in handling bulbs. It is pretty discouraging to the man who pays a federal tax and municipal taxes to have such competition to meet. Of course every good business man welcomes fair, honest competition, which in the end helps to keep business on a proper level. This method of price cutting, though, is demoralizing in the highest degree. It creates a feeling of resentment and distrust. It quite naturally spreads the impression among the smaller florists that seedsmen and importers are profiteers. This is far from being true, of course.

Probably there is no vocation outside of the florist business which calls for so much hard work, with so modest a return on the capital invested. It is not beneficial, but on the contrary harmful to the entire trade to have any sort of transaction which interferes with the legitimate business of American seedsmen or importers, and which cuts out their reasonable profits, to the advantage of the foreigners who do not pay the same taxes and who inject themselves into the American trade only at occasional intervals when they have an overplus of stock to get rid of, regardless of what it brings.

One of the most helpful addresses of the recent convention of the F. T. D. at Indianapolis was that of Ira C. Harper. While this address dealt largely with methods of

**Personal
advertising**

bookkeeping and kindred subjects, it dwelt also upon sev-

eral important points in retail trade. One of these points was "personal advertising," to use the expression of the speaker. And what he meant by this was the effort of the proprietor to create an atmosphere through his own personality, both when he himself is on the floor and as reflected by his clerks during his absence, which would give a feeling of welcome and comfortable complacency to all customers.

There is no question about the fact that a store may have a distinct atmosphere. Everybody who shops knows this to be true. In some stores the customer always feels at home, always feels that the clerks take a real pleasure in waiting upon him, always feels that he is getting the best service which can be given. In other stores quite the contrary is true. He has a feeling of being neglected or slighted, even though he cannot put his finger upon any positive fact to substantiate it. When he goes away, even though he may have made a satisfactory purchase, he does not have the pleasant feeling which will almost certainly ensure his return. In his talk Mr. Harper said:

"How often have we heard the expression, 'I like to deal with Mr. Smith because of the comfortable feeling with which he surrounds himself and his patrons. He is not too big nor too busy to meet any of his customers. His clerks are neat and courteous, and everyone of them acts as though disappointed because he cannot wait upon all who come into his store. You never have a fear of meeting a grouchy clerk in his store. In fact, even when most busy they all have a cheerful look or a bright word for those who visit their store.'"

Certainly this is a consummation devoutly to be wished by every proprietor of a retail florist shop. It is the open sesame to business success. It is the thing which is more often missed than quality stock, and a tasteful arrangement. It is something which few men are able to bring about without careful thought and a systematic plan. It means at the best a feeling of good will between the proprietor and his employees. Everything which brings about co-operative work will help to induce this result. Usually, though, it is necessary to go further and to instill into the clerks a feeling of pride akin to that of the proprietor in the welfare and standing of the store. It is not possible in a store where the help is constantly changing. It is easiest to create in a shop where the clerks have a financial interest in the business. Even then it is necessary for the owner to get his employees together at frequent intervals and talk over the general situation, thus bringing about a mutual feeling of responsibility. In essence this is a school for salesmen, but except in a very large establishment it will be carried on in an informal although perfectly serious manner.

In every big department store it is a customary practice to give lectures or talks to the employees. All too often the owner of a small establishment does not realize that the same principle holds in his store as in those many times its size. There are difficulties to be encountered, no doubt.

Some clerks seem constitutionally grouchy. Others lose themselves in their personal thoughts. Such clerks are to be replaced as soon as possible, and with anything like fairly good material to work with a wise and broad minded owner can greatly increase his returns without any actual outlay of money. Said Mr. Harper:

"I am a firm believer in the advertising value of the personnel of any business house and the place of business itself." So is every man in the retail trade who has given the subject any amount of consideration and who has studied the effect of a store's atmosphere on the people who enter it.

Flowers Under Glass

You will need heat for the sweet peas from now on, but be sure that the plants have full ventilation. When ventilating, though, you must avoid cold draughts, which are likely to cause mildew. Flowering peas require a night temperature of about 50 degrees, with perhaps 48 as winter comes on. Sweet peas which were planted at the end of July will be flowering shortly. It is too early, of course, to have a very strong market, as chrysanthemums have the call now, but there are always some customers who want them. It's a good plan to go over the benches carefully before watering, and when the peas need water give it bountifully, but don't water them at all unless they really need it. Over watering is a not infrequent cause of disaster. Syringe on all good days early in the morning to keep down the red spider.

Carnations thrive with a night temperature of 48 to 50, but the day temperature must be governed by the weather. It shouldn't rise above 60 degrees on cloudy days, or 72 when the sun shines. You may get a few extra flowers by running the temperature higher, and in the end nothing will be gained. When the carnations are showing buds in plenty, give them a light top dressing. It's wise to go over the benches every day looking for dry places, and giving water freely. Liquid manure can be used advantageously once a week, or if you prefer a top dressing from time to time, use dry blood or sheep manure or shredded cattle manure.

As violets are air loving plants, they must have plenty of ventilation. At this time of year the overhead spraying should not be very heavy, and should be done only during the forenoon. Damp down the houses and wet the walks only on sunny days. Success with violets can be achieved only if the plants are kept clean. Go over every crown to be sure that no insect or black spot are carried through the house. Aphis often gets established before it is discovered if the man in charge is at all neglectful. Remember that while violets like to be moist at the roots, they will not endure soil which is soaked all the time. More or less time must be spent

cleaning the orchids if you are growing these plants. Temperature may be lowered a little now, and ventilation must be given at all times when possible, because there are few orchids which like a close, stuffy atmosphere. Do your watering early in the morning. Most orchids will stand full sun now, and when the sun is not shining, water must be applied with caution.

Remember that Mignonette is easily damaged by over watering either in pots or on the benches.

Give Crotons all the light they can have, as it is a distinct aid in bringing out the coloring.

Bouvardias which seem to be again growing in favor need to be syringed regularly on all bright days. If the green fly appears in your house of Bouvardias, give several light fumigations until they are overcome.

As the top and root growth of your callas extends, increase the water supply. Remember that this is a thirsty plant, although it is quite possible for watering to be overdone.

GLADIOLUS.

A few gladiolus remain in blossom in our garden. The leaves of many are still green, so it will be a few weeks more before we harvest our bulbs.

They have done well with us this summer, flowering in many beautiful colors from the deep reds and the purple of the Baron Hulot to the soft shades of buff and salmon in the new primations. Next summer we want two beds of gladiolus, one for our enjoyment in the garden, the other in a propagating bed for seeds.

We attribute much of the beauty of our gladiolus to the deep planting of our bulbs. We set them the middle of April eight inches in the ground. With this deep planting they needed no stakes, but held themselves erect like a line of soldiers on parade. They began to bloom the middle of July, and now the middle of October there are still a few flowers in the bed.

Early in July we transplanted some of the bulbs, as some which we bought had failed to come up. We also then enriched the bed. Our only real disappointment was in having some bulbs which had been imported from Saumur, France, and sold to us as a soft, silvery blue, blossom a beautiful deep shade of red. It was a fine color but we had other red gladiolus in our garden.

GEORGE WATSON HIMSELF

Asters are still holding their own in the Philadelphia market notwithstanding the lateness of the season. We saw some yesterday (Oct. 14) a pink variety of good size and loose chrysanthemum build selling for eight a hundred and comparing them with 'mums no larger they were a bargain at the price. Dahlias are also in good form and plentiful. Of course the 'mum folks are wishing old Jack Frost would come along but they are mean critters and think only of the dollar. There seems to be room for them all: —roses, 'mums, dahlias, asters, carnations, and there is none of that glutty condition with waste all around so common in the summer months. American Beauty has eased up a little in price and the cattleya is also within reach of folks with moderate sized purses.

From now on we may look for a gradual improvement in the chrysanthemum market and the early indications are that it will be fully equal to all that has gone before. The growers are well prepared and are ready with best, including all the latest novelties. If these novelties stand the market test they are the real McKaye. Of

course there are other tests but in the long run the market test is the one that tends to longevity—a long and happy life and an honorable record in the halls of fame. Our old friend Colonel Bonaffon of blessed memory would clap his hands with joy to hear us say this. Bonaffon still reigns after all these years.

The sympathy of the trade is extended to George Aengle of the Philadelphia Wholesale Cut Flower Company on the death of his brother

Charles who passed away on the 12th inst., aged 43. Charles Aengle was prominent in the real estate business in the southern section of the city, being connected with the Shetzline Co. for many years. He held an enviable reputation for high character and business ability.

Recent visitors include Otto Buseck, Middlemont Nurseries, Asheville, N. C.; Antoine Martine, Havana, Cuba; Chas. Henlock, Public Grounds, Washington, D. C.; H. A. Brown, The Seed World, Chicago, Ills.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

The last issue of the Peony News Bulletin which has just come to hand is a highly interesting and informative document containing much which will be of value to peony lovers everywhere. Of course there is considerable to do with the annual meeting and show at Reading, Pa., and some of the points brought out, I think, have not been covered adequately in any other publication. An especially interesting discussion was that relating to humus. There has been much question as to the value of humus, but several growers reported that it did much to increase the quality of their peonies. Mr. George Thurley, of West Newbury, Mass., told of digging humus from peat bogs, and found there was a great difference in quality, something to be considered before the expense of digging and transportation was incurred. He said he had found meadow muck, which is practically peat or leaf mold, excellent. Where commercial fertilizers are used instead of barnyard manure it is desir-

able to add humus in one form or another.

Mr. James Bird reported that while he used no humus, he is carrying out a series of exact and systematic experiments on fertilizers, which ought to prove very valuable in future years. He considered that weak stems are often due to lack of potash, and says that much lime is bad for peonies, although irises will stand any amount of it.

Boston people will be pleased at the fact that the next convention and exhibition are to be held in the Hub, if possible in connection with the peony show of the Massachusetts Horticultural Society.

In this number of the Bulletin is an excellent article from the pen of Mr. Christman about the spring shows in Minnesota and St. Paul. Very great interest in peony growing has developed in Minnesota, and some fine

gardens are to be found there. This Bulletin calls attention to a fine painting to be seen at the Metropolitan Museum of Art. This is a picture of peonies by Wilton Lockwood, who was a member of the American Peony Society up to the time of his death. As the Bulletin says, it is not hung so well as it would be if there had been a peony man on the staff of the Museum, but the picture is delightful in itself, and gives much of the spirit of the peony. It seems to have been painted from blooms of La Rosiere.

One of the most satisfactory plants in the fall is *Helenium autumnale* *superbum*. It flowers when most of the other perennials have gone. It sometimes acts in a peculiar way, however. Ordinarily it grows about four feet high, and in good soil sometimes gets to five feet, so that it is commonly used among the taller plants. This year, however, the plants in my border have not exceeded three feet in height, making them quite dwarf compared with their usual standard, and producing an effect somewhat different from what I had intended. I think that the explanation is that the plants were stunted in the spring by some sort of insect, and bloomed without making their natural growth.

I have seldom seen a season when the heliotropes have made a more satisfactory growth, and great trusses of fragrant blooms have been a conspicuous feature in some gardens, with colors varying from pale lavender to deep purple. Along towards evening the heliotropes give off a most delightful odor, and while the flowers are not showy, they certainly deserve to be grown freely. If seeds are started in gentle heat in February, and the seedlings pricked off into three-inch pots, they may be planted out as soon as danger of frosts is over. Probably seedlings do better than cuttings because they tend to make a more graceful outline. One good gardener at least says that the result is always better when beds are filled with seedlings than when cuttings are used, because in the latter case there is always a flat and rather unattractive surface.

This season the perennial salvias have proved remarkably satisfactory. They have kept the note of blue in the garden well into the fall, and have combined well with the other fall blooms. By employing such of the salvias as bloom at different seasons it has been possible to have them in flower all summer. In the list I should certainly include *Salvia virgata nemorosa*, *S. uliginosa* and *S. azurea*. Perhaps I ought to mention also the white and carmine forms of the native Texas species, *Salvia Greggii*, which are of medium height and begin to flower late in June. Give the hardy salvias full exposure to the sun and they will thrive well even in a light soil.

An English climber which is receiving much attention and high praise although it is by no means new, having been sent out by Paul & Son in 1908, is *Lady Godiver*. The English growers this year are speaking well of Paul's *Scarlet Climber*, which has been introduced into this country for a season or two, and which promises to become a valuable addition to the list of garden subjects. I have only a small plant in my own garden, but it bloomed freely this season. It is very lavish with its flowers when it gets to be a large plant, and the blooms show a remarkable presistency. It is another variety which in England helps to glorify the month of August, notwithstanding the fact that it begins to bloom in June.

The Indian Village Greenhouses, of Detroit, Mich., are now located at the corner of Mack avenue and Maxwell street.

Be sure and get Meyer Threads and take no other.

THE TREE OF HEAVEN

It is Still of Great Value for Street Planting

The Tree of Heaven of the Chinese, which botanists now call *Ailanthus altissima*, although it is still better known as *Ailanthus glandulosa*, is one of the remarkable trees of the northern hemisphere. Raised in Europe in 1751 from seeds sent from Peking, the *Ailanthus* was one of the first Chinese trees known in western countries. The first *Ailanthus* was planted in the United States by William Hamilton in 1784 in his famous garden near Philadelphia; and in 1804 it was first planted in New England near Portsmouth, Rhode Island, where it is still abundant. For many years little attention was paid to the *Ailanthus* in Europe until it was found that one of the silk worms could be successfully fed on its leaves. This discovery led to the establishment of great *Ailanthus* plantations in France where they have succeeded beyond the most sanguine expectations, the best results having been obtained in calcareous soil and on the sandy seacoast.

The date of the first planting in Europe of the *Ailanthus* as a street tree is not known, but when the streets of Paris were generally bordered by trees in the early years of the second Empire it was largely and successfully used for this purpose. As early as 1820 its remarkably rapid growth, the tropical appearance of its long gracefully drooping leaves and its freedom from the attacks of insects attracted general attention to the *Ailanthus* in the United States.

It was found to flourish equally well in the country and in the streets of New York and Philadelphia where it grew more rapidly than any tree which had been planted in those cities; and it was believed that a tree had been found which would take the place of all others for city planting. So great did the popularity of the *Ailanthus* become in a few years that the number of the trees planted was only limited by the ability of nurserymen to supply the demand.

The popularity of the *Ailanthus* in the United States, however, was short-lived, for when the trees began to flower it was found that some of the flowers emitted a strong and to most persons an offensive odor, that the clouds of pollen shed from the flowers and the flowers themselves dropping on neighboring roofs so affected the water caught on them that it was unfit for use, and that the flowers which dropped on the ground made the city sidewalk and the country yard unbearably disagreeable. The peculiarity of the flowers discovered, the *Ailanthus* sank rapidly in popular esteem, and its general destruction in this country was advocated and put into execution.

Unpopular as the *Ailanthus* has become, it is one of the handsomest and most valuable trees in the world. Planted in cities it can resist better than any other tree heat, drought, dirt and gas escaping from defective pipes which menace the life of city trees. It grows rapidly even in the most unpromising situations; it is never seriously injured by insects; and few trees can be more easily propagated,

for small pieces of the root covered with soil will soon grow into plants large enough to transplant.

The suckers which the *Ailanthus* produces in great numbers from the roots are the real drawback to this tree, but when it is planted in city streets they are unable to force their way through brick sidewalks and concrete is impervious to them. The male and female flowers of the *Ailanthus* are chiefly produced on different trees; only the male flowers have a disagreeable odor and drop to the ground. The female flowers are scentless. In the clusters of female flowers occasional male flowers are found, but there are so few of these that their odor is not perceptible.

It is perfectly easy to propagate only the female tree which is the one which should be planted, and apart from the absence of the disagreeable smell of the flowers it is more ornamental than the male for the winged fruit of the *Ailanthus* produced in great terminal clusters is handsome and conspicuous in the late summer and autumn. Their fruit is usually yellow, but in one variety it is bright red (var. *erythrocarpa*) and more brilliant and conspicuous than the fruit of any tree of large size which can be grown in the northern states.

The leaves of the red-fruited variety are darker on the upper surface and paler below than those of the yellow-fruited form; and the handsomer leaves and more brilliant fruit make this the desirable form to cultivate. There is certainly no better tree than the *Ailanthus* to shade the streets of American cities provided they afford sufficient room for its development, for the *Ailanthus* even when it is planted in cities may become a tall, wide-branched tree, demanding space in which to display all its beauties.

Although the attempt has not been made on a large scale in this country to fix shifting sand dunes by planting the *Ailanthus*, it has been successfully used for this purpose in Europe, especially in the neighborhood of Odessa on the Black Sea, where large plantations of *Ailanthus* have been successful on sterile soil so shifty that other trees have not been able to secure a foothold on it.

The Tree of Heaven produces valuable hard, heavy and close-grained wood of a pleasant clear yellow color, resembling that of satinwood; it is easily seasoned, and shows as little tendency to shrink or warp as the best mahogany. Beautiful furniture has been made from Ailanthus-wood raised in New England, and if the tree is ever grown on a large scale on the sandy now unused lands of our sea-coast it will supply the cabinet-maker with wood which in quality and beauty equals that of the White Oak, the Black Walnut and the Wild Cherry.

It is an interesting fact that although the Ailanthus is now known in all the countries of the world which enjoy a temperate climate its true home in China, that is the region where it is a really wild tree, is still unknown to Europe and American botanists who have now traveled in nearly all parts of the Celestial Empire. Two other species of Ailanthus, A. Giraldui and A. Vilmoriniana, are known, however, as wild trees in western China. The former which differs in the presence of prickles on the branches has not proved hardy in the Arboretum; the other, which chiefly differs from the common Ailanthus in the downy covering of the young branchlets, is now established here but has not yet produced flowers or fruits.—*Arnold Arboretum Bulletin*.

ORCHIDS AT BOSTON SHOW

President Harding, a New Variety,
Among Those Exhibited by Mr.
Albert C. Burrage

One of the leading features of the fall flower show at Horticultural Hall last Saturday and Sunday was the orchid exhibit of Albert C. Burrage, continuing the displays which he has made throughout the past year. A novelty was a new orchid christened in honor of President-elect Harding, the name having been given immediately after the election returns came in, and being suggested by Mr. Burrage's superintendent, Douglas Eccleston. The new "President Harding" is mauve in color, with a very large lip. It is a hybrid Heatonese Cattleya.

Besides "President Harding," Mr. Burrage showed 40 varieties of ladies' slippers, most of them hybrids, and one specimen of the largest known variety, *Cypripedium Goliath*. A false rock work has been set up, occupying one end of the upper hall, where these ladies' slippers of the rock habitat varieties were shown as if growing. Most of these were European varieties. Above them were the tall stem orchid from India, *cymbidiums*. Still higher up are some tree orchids, growing on imitation stumps—*Oncidium-Forbesii*.

Individual orchid plants shown by Mr. Burrage included also a specimen of *Sophrro-Cattleya*, measuring about four inches across, a hybrid from the *Sophrro-Nitis*, which measures only one inch across. This flower shows the results of a scientist's touch. It was given the award of merit at the London Horticultural Show and bears the grower's name, Pearl. A Blue *Cattleya*, of the variety *Boringeana-lilacina*, is the nearest approach to a blue orchid that has been produced, according to Superintendent Eccleston. For twenty years he has been trying to secure a blue flower, and he plans to renew his efforts now with this one as a basis. This particular plant last year received the highest award at the London Horticultural Show, the "F. c.C." and is known as the "Alex." in honor of its grower. It has petals of bronze and its lips are crimson and gold.

The Princess Patricia and the Butterfly Orchid are others in the Burrage display that attracted attention.

Charles Sim is around again after his week in the Bryn Mawr Hospital, and is feeling all right. He has to return again for final treatment about November 25. His case is under the care of Dr. Carpenter the eye specialist.

No. 18

THE TALK OF THE TRADE

Rose growers are well pleased to learn that manetti stocks have come down again to a more reasonable figure; in fact, for a few years back it was not possible to get enough stocks in to supply the demand. Of course the price quoted on manetti this year is not anywhere near the price of other years. When we think of the old days of \$9 and \$10 per 1,000, and now run up against prices from \$50 to \$65, we realize what a change there is in the price of manetti, and the reasons why grafted stock is not so plentiful and quoted so high. However, it is fortunate that there will be stock enough around to fill all calls.

S. J. Goddard is fortunate in having a fine stock of the new *Calceolaria*

Lymani. This is similar to *Stewartii*, but does not grow quite so tall as the latter and carries deep red flowers. The color shades pretty well towards crimson. Lymani is without doubt a most excellent sort. It was awarded a gold medal by the Massachusetts Horticultural Society, and is a wonderful variety in every way. Mr. Goddard has sufficient stock so that he can propagate in quantity, and the private trade in particular is well pleased to be able to get young plants of this sort this season. The commercial florist can well afford to get stock of Lymani as there is no doubt of its value as a commercial pot plant.

Growers who intend to force *Giganteums* for Easter this season are very

much encouraged as that stock is at the present time en route from the coast and due in the East shortly. Probably a week to ten days will see the first lots in, and that is very pleasing to those growers who are not equipped in such a way as to be able to run separate houses with high temperatures. Easter comes early this season and if *Giganteums* were to be held up beyond December 1st, it might be difficult for many growers to get their stock into flower. Early reports regarding quantity were not exaggerated. Large sizes are decidedly short and at present very little stock remains unsold in any size above 7/9; in fact, in some cases the 7/9 size is pretty well cleaned out.

Those who saw the new *Begonia Optima* last season are waiting to see

Jean Kerr Is an Excellent Dahlia for Cutting

how it turns out for this year. Speaking in a general way it would appear that this variety is not so easy of culture as was at first thought, but difficulties will probably be overcome and the experts working on this begonia will without doubt learn the troublesome points and find a way of finishing the stock up as it deserves when we remember the fine specimen plants that have been shown in the past.

Besides Optima, there is another variety which is deserving of attention, in fact, I am not sure that Mrs. Heal is not every bit as good as Optima, and one grower in particular seems to think that the latter is easier to handle. Optima produces flowers of wonderful size and a true salmon color that makes the Lorraine type look dull by its side. Mrs. Heal is practically the same so far as bloom and growth is concerned, but the color is what I would describe as a true American Beauty shade or wine color, and if it is of such easy culture as we are lead to hope for now, it is going to be a valuable plant. A. M. Davenport of Watertown has a nice stock of Mrs. Heal in 6 inch pots and they are coming into flower in fine shape and should be in prime condition for the holidays. He also has a limited supply of Optima, and the W. W. Edgar Co. has a nice block of Optima as well as a small quantity of Mrs. Heal. Plantsmen are watching these varieties and I hope that they turn out to fulfil all expectations.

Now that the first blocks of chrysanthemums are out of the way I see evidence in all directions of heavy plantings of such crops as wall flower, schizanthus, myosotis, calendula and anything that can be handled in cool temperatures. There are several fine strains of myosotis for winter flowering and generally speaking they turn out well for the growers. This is also true of wall flower, and while schizanthus has not been so freely planted, it seems to be coming into favor. Wisconsinensis is the one which is generally planted.

PRIMULA TOWNSENDII, our selected strain, out of 3 inch. ready for 4½-5 inch pots, \$15 per 100.

DRACAENA INDIVISA, field grown plants, ready for 5-6 inch pots, \$25 per 100. No orders accepted for less than 100.

BOUGAINVILLEA SANDERIANA, fine specimen plants, \$2-\$4 each.

OTAHEITE ORANGES, field grown plants, ready for 5-6 inch pots, \$1 each.

A. L. MILLER

JAMAICA

NEW YORK

Henry Penn's unique customer's appreciation cards have evidently met with favor in other parts of the country. They have been adopted practically without change, I understand, by one of the concerns which puts out the literary material for florists. Certainly they are being widely distributed, and florists in all parts of the country are using them without any knowledge of the fact that they originated in the Henry Penn establishment. This is highly complimentary, of course, but doesn't seem altogether fair. The cards in question are those which are sent out to customers with orders, and which vary in phrasing, but which tend to inspire confidence and link the customer more closely with the Penn establishment. This is one of the cases, apparently, where originality pays its own penalty.

It is a far cry from Lompoc, California, U. S. A., to the heart of London but Ant. C. Zvolanek, Lompoc, Cal., originator of Winter Sweet Peas has been over there talking to a member of the Trade-Journal's Staff.

Whoever likes may come along with the protest that the Winter flowering Sweet Pea is not so fine in quality as our best modern varieties, or that there are ten times more varieties of the new Winter flowering race than are necessary from point of view of distinctive character or commercial worth, but, nevertheless, the newcomers possess merits all their own, and when it becomes known that Spring sown seed of the new race can be had in bloom in sixty days, and Autumn sown within ninety days, and that by making successional sowings outdoors from Spring to Midsummer, and under glass during Autumn and Winter, Sweet Peas may be cut the year round, there will be a good and increasing demand for the stock.

Mr. Zvolanek had many interesting bits of news to relate regarding the seed growing industry in his district, which he says is 150 miles or more north of Los Angeles, and has a cold climate. The area under Sweet Peas in the Lompoc neighborhood is vast, Burpee and other well-known firms having large tracts under cultivation. When one hears of soil so good and so deep that crops require no manure or fertilizer whatever, and, despite the fact that for six months or so not a wet day hinders work, the root run remains beautifully moist, he begins to understand how it is that the California seed growers can own and work such large farms and produce seeds on such a huge scale.

CHRYSANTHEMUM SOCIETY

Annual Report of the Secretary,
Charles W. Johnson

Mr. Charles W. Johnson, secretary of the Chrysanthemum Society of America has issued his annual report. He says:

The eighteenth annual meeting was held in conjunction with the annual fair of the American Institute of the City of New York at the Engineering Building, New York. There was a very creditable showing of fine blooms exhibited by the members of the society consisting principally of the standard exhibition and commercial varieties but very few seedlings or new varieties. The lack of new seedlings at our exhibitions brings to the mind of experienced exhibitors the difference between the shows of today and those of former years when the greatest interest was centered on the seedlings and novelties and now that we cannot depend on foreign importations to create this interest it is a challenge to the members of the C. S. A. to demonstrate their ability along the lines of producing new varieties. There was a very strong showing of the pompon and single varieties which attracted the attention of the visitors showing how popular these varieties are with the general public. The secretary was in attendance at the show and a report of the proceedings has been printed and mailed to all members of the society.

The invitation of the Washington Florists' Club to hold the 1920 meeting in Washington being accepted, your secretary accordingly made a solicitation of special premiums and thanks to those who contributed to the same we have a very creditable list of premiums.

Your secretary has noticed most particularly during the past year the falling off in the support the society is receiving from the private gardeners; this may be due to the conditions as they now exist on private places following the war, but as the C. S. A. has drawn its strongest support from the ranks of the gardeners we can ill afford to lose it.

The planting of chrysanthemums for commercial cut flower purposes is larger than ever this year, especially the pompon varieties, but up to the present time the demand has kept well up to the supply throughout a greater part of the country. In the eastern states the unusually fine weather for this time of the year has advanced the flowering period of most of the varieties so that the season will be short-

Keep them Coming

We don't care whether you grow Roses, Carnations, or Sweet Peas, but we do know that the fellow who has Lilies this Spring is going to top the market for prices. Plant all the bulbs you can buy. ened considerably; otherwise the chrysanthemum grower has little to complain of.

Your secretary wishes to acknowledge the kindness of Mr. Elmer D. Smith in furnishing him with a complete list of varieties disseminated in 1919 which was a great help in getting up the annual report.

A new store has been opened on Ridge Avenue, Philadelphia, by Mr. John Brown, son of Mrs. S. Brown, who is a well known florist located on West Lehigh Avenue.

August Wanjeck has bought the property 2537 Lehigh Avenue and will remodel same for his retail flower business.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

There is going to be trouble for the dahlia specialists unless they are more careful about labeling their roots. There has been much complaint the past season that when the dahlias have flowered they have not proved to be the varieties ordered. There has been much criticism of nurserymen in the past because fruit trees have not come true to name, and it is to be hoped that no such situation will develop in the bulb trade. Judging from reports this season, though, there has been very much careless work, with the result that some of the leading dahlia growers have had their reputations badly tarnished. I think there is nothing which is worse for the grower than to have a customer come to feel that he has been deceived or made the victim of a poorly conducted

business. No doubt much of the trouble has been due to the difficulty experienced in getting reliable help. When any business of this kind gets so large that a lot of help has to be employed, trouble is almost certain to ensue. As the situation stands, though, it is highly important that dahlia growers, and for that matter gladiolus growers, make a point in the future of putting accuracy in the labeling of their bulbs above everything else.

The evergreens and conifers are looking especially well this fall. Most of them have recovered from the effects of two hard winters and are in excellent condition. I am speaking particularly of my observations in the Arnold Arboretum, and I think what

I have said holds good, at least throughout New England. One tree in the Arboretum which excites the admiration of everybody who sees it is the Japanese fir, called *Abies homolepis* or *brachyphylla*. This tree is one of the best evergreens which thrive in New England. It is very symmetrical and well shaped. There is no such large tree in the Arboretum as is to be found on the mountains of central Japan, where this fir has its home, but a specimen 55 or 60 feet high, with branches sweeping the ground, is growing in the Hunnewell pinetum at Wellesley. *Abies Veitchii*, from Japan, is also a very handsome tree, and a specimen growing close to the driveway in the Arnold Arboretum, not far from the Walnut Street entrance is sure to be commented upon by visitors. Near by is still another tree which has great merit. It is the *Pseudolarix*, the soft feathery foliage of which is most delightful. Like the larches, it loses its leaves in the fall, but even when disrobed it is an attractive object to look upon.

Abies Homolepis from Japan

FALL SHOW IN BOSTON

**"Mums" Were Not Up to the Average,
But Begonias and Orchids Were
Extra Good**

The fall show at Horticultural Hall, Boston, last Saturday and Sunday was largely attended, but did not measure up in all ways to the hopes of those who had it in charge. The chrysanthemums, while fairly numerous, were lacking on the whole in size and quality of the flowers. A particularly large exhibit was made by Mrs. Homer Gage of Shrewsbury, who had twenty varieties in more than fifty vases. Some Japanese anemone varieties were particularly good. Edward E. Clark, of Jamaica Plain, had some of the largest flowers shown among his fifteen varieties of chrysanthemums. Miss Marian Roby Case of Hillcrest Gardens, Weston, displayed fruits and vegetables of more than twenty-five different classes, and received many compliments on her entries. Twenty different varieties of fruits and vegetables were shown in the display staged by Supt. W. N. Craig, of Faulkner Farm.

Undoubtedly the feature of the show was the exhibit of begonias from the estate of Thomas E. Proctor, of Topsfield, James Marlboro, superintendent. These winter flowering begonias were exceedingly beautiful, and occupied the center of the floor in the larger hall, where they were surrounded by eager visitors. There were forty varieties, and about one hundred and fifty plants. Most of them are new Clibran's hybrids from England, and the colors ranged from light orange to very deep red. Edwin S. Webster also had some good begonias, including Gloire de Lorraine and Glory of Cincinnati.

The orchid display of Mr. A. C. Burrage is noted elsewhere. The following is a list of awards:

AWARDS FOR PLANTS

John Allen French Fund. Chrysanthemums.—One trained specimen plant, White: 1st, E. A. Clark. Garza. One trained specimen plant, Yellow: 1st, E. A. Clark. Mrs. Wm. Duckham. One trained specimen plant, Bronze: 1st, E. A. Clark. Hortus Tolusanus.

WOMEN GARDENERS

Sometimes I feel as if I would like to have a woman take care of my flower garden at Hillcrest. For as a rule women are better nurses. Men are good for spring and autumn work. They can plan and plant, do good landscape work, go in for effects. But when it comes to the care that plants need in summer, the watching, nursing and babying I believe that women will prove better.

There are some men who have this woman element to a large degree—not the feminine, there is a difference—of them, poets, artists and good gardeners are made. The marking of crosses on a piece of paper is not going to make any difference in the spirit of womanhood in either man or woman and there is still truth in the old saying that the hand that rocks the cradle is the hand that rules the world.

FINANCE AND AUDIT COMMITTEE

It was decided at the meeting of this Committee held in Indianapolis on October 10th, to make an appropriation of \$300 to the Nomenclature Committee. It will be remembered that by action of the Convention held in Cleveland last August, the question of this appropriation was referred to them for final action.

NATIONAL PUBLICITY CAMPAIGN

A question has been sent in asking whether it is the intention of the Publicity Committee to abandon the National Advertising Campaign. To this, we would reply most emphatically—no! Just consider for a moment the names of those on this National Publicity Committee:—Henry Penn, Chairman, George Asmus, Wallace R. Pierson, Fred Ammann and C. C. Pollworth. These are broad-minded successful business men with a vision who realize the possibilities and the advantages of the National Publicity Campaign and under no circumstances would they permit any let-up in the activities of this important undertaking.

The following subscriptions have been received and are in addition to those previously announced, annually for four years, unless otherwise stated:

A. F. T. Lauritzen, Auclair, Wis., 1 yr.	\$10.00

43 W 18th St., New York City.

FLORAL EXHIBIT AT TARRYTOWN, N. Y.

The Annual Fall Exhibition of the Tarrytown, N. Y. Horticultural Society was held in Music Hall, November 3, 4 and 5. Music Hall was turned into a fairyland after the exhibits had been arranged.

The exhibition again proved a success. Owing to the unfavorable weather conditions, the exhibits in the Chrysanthemum line were not quite as extensive as in former years, but of fine quality. The fruit and vegetable exhibits were far ahead of previous exhibits. Competition was keen in the table decoration for the Stuyvesant Fish Cup.

Notably on exhibition was a new pink rose on the order of La France, and also a pink Francis Scott Key, exhibited by F. R. Pierson. This firm was also awarded the Certificate of Merit for their beautiful exhibition of Roses, Chrysanthemums, Ferns, Palms, etc.

Certificate of Merit was awarded to Hubert E. Rogers, Charles L. Fisher, superintendent, for four heads of Cauliflower; Honorable Mention to Mrs. Stanley McCormack for exhibition of Cosmos.

The Judges on the first day were: T. F. Eastwood, Garrison, N. Y.; Alex MacKenzie, White Plains; and George Middleton, Tarrytown. On the second day they were William Whitton, New Rochelle; E. Beckett, White Plains; and Duncan McGregor, Tuxedo Park, N. Y.

The exhibition was well attended and fully appreciated by all those who visited the show.

AMERICAN NURSERY INDUSTRY

According to the latest census, there are in the United States, 4,500 nurseries, covering 172,800 acres, representing an investment of 52,500,000 dollars, employing 45,600 men and 2,279 women, using 14,200 animals, and there are 3,400,000,000 woody plants or trees growing in the nurseries of this country.

FLOWERS AND GUM

It is stated that forty-five million dollars are now spent on flowers every year in the U. S. A. This looks a big total, but it is also stated that this is less by five millions than is spent on the unpleasant habit of chewing gum, so there is evidently still room for advance.

SUBSCRIPTION RATES:

One Year, in advance, \$1.50; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

For years orchids have been looked upon as **Orchids** flowers to be enjoyed only by the rich, and it has been remarked more than once that they could not be expected to arouse any great amount of popular interest at a flower show. The fallacy of this reasoning has been shown at Horticultural Hall during the past year, where Mr. Albert C. Burrage, of Beverly, has broken all records for orchid displays and performed a great public service in behalf of flower lovers by staging monthly exhibits. Contrary to expectations, or at least to many prognostications, these displays have aroused a great deal of interest. Indeed, they have proved among the most popular features of the shows, have received long notices in the papers, and have shown that the orchid is viewed with interest even by people who are not able to grow them.

We believe that one reason why the orchids **Staging shows** shown by Mr. Burrage at Horticultural Hall the past year have been so highly appreciated is the way in which they have been displayed. It was an inspiration when Mr. Burrage got away from the old fashioned table form of exhibit, and put up his display in such a way that the orchids became part of a general decorative scheme. Take, for example, the show of last week. A false rock work was set up at one end of the hall, and there the flowers were arranged as though growing in their native habitat.

In almost every instance the method of display has been different, showing remarkable originality and resourcefulness. There is a hint here for exhibitors in all classes, and it is to be hoped that the influence which is radiating from Horticultural Hall will have its effect on other shows in different parts of the country. A flower show ought to be something to fill the eyes of the visitor with delight, as a well composed picture, instead of being merely a stiff and unattractive arrangement of single specimens set out in rows without any attempt at decorative effect.

Apparently the flower growers who took their **Coal** age in their hands and decided to wait for lower prices, come what may, are going to reap the benefit. Bituminous coal is certainly sliding downward, and prices seem likely to go considerable lower than they are now. Of course, it was a gamble all along, and those who bought coal when the price was high cannot be blamed. In many instances it seemed the only way to prevent a heavy loss. Still, those who waited, though, will make a tidy saving, because when one uses two or three thousand tons of coal a year, a difference of one or two dollars a ton makes a sizable total.

It is to be hoped that many other private **Begonias** growers will be stimulated by the action of Mr. Thomas E. Proctor, of Topsfield, in showing his big collection of English winter flowering begonias at Horticultural Hall at the last exhibit. On the whole, owners of private estates have been reluctant, apparently, to enter the shows in any large way of late years. Perhaps this is true in Boston to a greater extent than in New York and some other places, but it isn't confined wholly to the east by any means. Unless these privately grown plants are shown, it is impossible to have the exhibits measure up to the standard which has been set for them in the past.

The warm welcome given Mr. Proctor's wonderful begonias and the many congratulations showered upon his competent superintendent were enough to prove that the flower loving public appreciated the effort made. It is certainly to be hoped that horticultural interests are to once more take an upward trend. The situation has been far from satisfactory since the war. Perhaps it was to be expected, but it is time now for everybody interested in horticultural advancement to get together and help restore conditions to normal.

There are rumors from Washington to the effect that some startling changes are to take place in the personnel of the Federal Horticultural Board. Just what foundations these rumors have it is hard to say. No confirmation has come with the report that Dr. Marlatt intends to resign, and it may be that the recent election will mean the holding over of all members of the board until something develops as to the future policy of the government. In any event, there seems to be a well defined feeling throughout the country that there is bound to be a change in the situation, with a probable modification of the board's rulings which will do away with the worst features of the embargo without in any manner interfering with its effective control of insect pests and plant troubles of all kinds.

Are there too many of them? The feeling has been voiced in the west that the **Organizations** multiplication of societies, especially in the florist trade, has reached a point where a balance must be struck. Organization is a fine thing. It is needed, and without it the florist trade could not expect to go ahead. There are different forms of organization, however, and what can be accomplished by a large number of people working in one body is much more difficult to carry out when the same number of people are split up into half a dozen societies.

In some of the larger cities there are organizations which overlap. In several places there are two or more which might consolidate without any loss of advantage if the members could get together on a proper give-and-take basis. It seems quite probable that the next slogan will have to be "Consolidation," and it's time to be thinking about the matter.

Flowers Under Glass

Don't forget to keep your glass clean, as it often happens if you use water from a pond or brook or river frequently a green scum will form especially during dark, rainy weather. A good way to get this off is to use a squeegee or scraper with a hard rubber edge. Select a cloudy day for the work if you can, for then the scum will be softened as a result of the condensation on the glass. Run the scraper up and down and you will make quick work of the job. Some little scum may remain on the glass, but it will be so loose that it can be washed off easily with the hose on the first clear day. Do not overlook the importance of this matter, because the plants get none too much light at best during the winter months.

Do not hesitate to use lime in abundance especially when the weather is dark and rainy. It's a good plan to blow it under the roses each night, also dusting it freely under the benches, and using plenty of it in both cases. If the houses have not been kept as clean as they should have been a generous application of lime will help to sweeten the air and destroy such insect pests as are naturally found in dirt and moisture. Of course, applying lime is not a pleasant task, but it has to be done in all green-houses.

Give your sweet peas fire heat, but full ventilation, and above all things avoid cold draughts or you are likely to have a bad case of mildew. Try to keep the night temperature about 50 degrees, although you can go a little lower when winter comes.

With coal scarce and high, it will pay you to conserve heat in every way possible. One way is to keep your houses tight, and you can only do this by replacing all broken glass. To be sure, glass is also expensive and none too plentiful, but it can be obtained and is most necessary.

"You in your small corner and me in mine."

Mr. and Mrs. Robert Craig celebrated the 50th or golden anniversary of their wedding at 4960 Chestnut street, Oct. 27th. A select party of their close personal friends attended to congratulate the distinguished couple. The dinner and reception was scheduled to last from 8 to 10 p. m., but the enthusiasm of old times made the lights burn long overtime, before all the handshaking had been accomplished and the good wishes and old stories had received proper recognition.

Robert Craig is a man of world wide fame in the horticultural world and has done a great deal to make Philadelphia famous at home and abroad. For the past forty years he has been in the front rank in every forward movement. He has been president of both local and national horticultural societies, and has added dignity and distinction to every office he has held,—and they have been many.

The Society of American Florists, The Pennsylvania Horticultural Society, The Philadelphia Florists Club, and many other organizations owe much to his splendid personality and ardent enthusiasm, and the example set by him, away back a quarter of a century ago, has borne rich fruit all over the country. Today every city in the Nation has followed Philadelphia's example in these horticultural organizations, and Robert Craig's as-

sistance has always been ready and willing, no matter how far afield he might have to go to add, by his oratory and example, to keep the good work going.

If Queen Flora has any nobler knight in her distinguished service than Robert Craig, she smiles and puts him among her first ranks, with bays and laurels.

Robert was born in Philadelphia, and as his name indicates he is of Scottish lineage. In its palmy days, the Caledonian Club of Philadelphia had no more distinguished chief, and its brilliant achievements in sporting and fraternal affairs in those days were largely due to his initiative, and when he donned his kilts and went to meet some distinguished visitor, like Harry Lauder, he certainly looked picturesque and a credit to the rugged country of honest men and bonny lassies. A good picture of him in that connection, appears in the Evening Bulletin of December 14, 1908. Few men have such well-rounded, human and intellectual fine points as Robert Craig and he has done credit to his Creator in using them for the benefit of his fellow men. The best wishes of all went out to him and to his faithful and ardent partner and everybody wished them, at least, another thousand years of happiness and prosperity.

In the course of the evening, Mr. Craig recited the beautiful lines of James Graham, Marquis of Montrose, written to his wife about 1650. These beautiful verses, he said, were a tribute to Mrs. Craig, who embodied them although he had never asked her to do so, like the Marquis did his good lady.

"My dear and only Love, I pray

That little world of thee

Be govern'd by no other sway

Than purest monarchy;

For if confusion have a part

(Which virtuous souls abhor),

And hold a synod in thine heart,

I'll never love thee more.

FULL
SIZE
No. 2

It is one of those layouts of parallel house which have so much to be said in their favor. The length over all is 133 feet. Each house is 25 feet wide.

Schwab's Vegetable Range

The name Schwab means big things done in a big way. A big way means not necessarily big in size, but big in that everything down to the smallest detail was considered.

First we built him a complete range exclusively for flowers. Then followed this vegetable range, where Mr. Ireland is doing such wizard work with his growing. Being practical purpose houses, the rafters are spaced 12 ft. 1 3/4 in. apart just as in our commercial houses. The houses fronting on the garden are semi-curved. The two behind it have our standard angle ease treatment.

View looking down the fruit house arches. You can just see our friend Ireland way at the other end.

You may recall that we built two practical purpose houses constructed the same way for the late Hetty Green's daughter, Mrs. M. A. Wilks at Greenwich, Conn. And later, two big houses for her brother, Col. Green, whose estate is near New Bedford, R. I.

If men like Schwab and Col. Green believe there is much in favor of the practical purpose house, seems like it's worth your while to look into it. It may mean more houses for the same money. Or better growing conditions. Both interests you. You know we go anywhere for business. Or to talk business.

Glimpse of the cables, showing both kinds of eave construction.

Among other things Ireland does surprising well, is always to have Beans "in crop."

AN IMPROVED METHOD OF SEED "STERILIZATION"

It is a common practice to treat with an antiseptic solution, such as copper sulphate or formalin, the seeds of cereals and other plants, the seed coats of which are suspected and known to be infected with the spores of pathogenic organisms. Unfortunately, the usual method of treatment generally leads to a decrease in the germinating capacity of the seed, and also to irregularity of germination. Mr. H. Braun, of the Laboratory of Plant Pathology, Bureau of Plant Industry, U. S. Department of Agriculture, has introduced an improvement which it is claimed increases the efficacy of the method and produces no ill effects on the germination of the seed. The improvement consists in a short preliminary soaking (ten minutes) of the seed in water before steeping it in the antiseptic solution. It is suggested that the method owes its efficacy to the fact that since the preliminary soaking results in the taking up of a large amount of water by seed, subsequent steeping in the antiseptic leads to a smaller quantity of the poison passing the seed coat. It is further suggested that the preliminary soaking encourages the micro-organisms to begin to germinate so that they are in a highly susceptible state when the time comes for applying the antiseptic.

FORCING LILY OF THE VALLEY

By the use of retarded crowns, it is an easy matter to maintain a regular supply of flowers of Lily-of-the-Valley, as the plants quickly respond to forcing. The crowns should be packed into 48-sized pots; or, if simply required for the supply of cut flowers, they may be planted closely in small cutting boxes. Cover the pots or boxes with clean Moss, and stand them for a few days on an open bed or bench in a warm house, afterwards transferring them to a close case in the forcing house, where they may be given a bottom heat of 75 to 80 degrees. Success in forcing most hardy plants depends largely in introducing them gradually to a high temperature; subjecting such plants directly to much warmth too often results in failure. Ordinary Lily-of-the-Valley crowns, whether imported or home-grown, should be placed in pots or boxes, and stood in an exposed position out-of-doors. All plants of this description force much more rapidly after being freely exposed to the weather.—*Gardeners' Chronicle*.

No. 19

THE TALK OF THE TRADE

Armistice Day in Boston was decidedly a quiet time. Very little notice of it was taken excepting what was carried on at the Charlestown Navy Yard and some modest decorations and observances on the Common. It was left to the florists of Boston to show the real patriotic spirit, and they carried through Flower Day in fine style. I think the florists did themselves proud in the way this was carried out, also they did a lot of good. I have heard many remarks and comments from people outside of the trade which proves that they made themselves heard.

Flowers were taken to every hospital in the city, private hospitals included. Contributions were made in a most generous manner and flowers of all kinds in good quantity were available. The florists formed in line at the flower market in the form of an automobile parade and started out with plenty of noise from the tooting of horns. It is proposed to have this an annual occurrence and we all hope that it will go through as such.

A while back it seemed that chrysanthemums would be pretty well cleaned out by Thanksgiving time, but now I believe there is every prospect

of having a good supply for the holiday. It is true that Bonnaffon started in very early, but I have seen quite a number of large batches within the last few days which I feel quite sure will last through the end of the month. This is also true of Enguehard, Seidewitz, and I believe even some Rager will be left for that time. In general, there will be a good supply and of good quality, not only in the large-flowering but also in singles and pompons; and it is interesting to note at this time also that while chrysanthemums are not bringing any fancy prices at all, they have stiffened up somewhat and, better still, we find that they are moving easier.

There is quite a distinct call for flowers of all kinds, this being particularly true of carnations and roses as well, and the encouraging point is that there is a demand. Of course the large quantity of stock coming in makes it impossible to get very high prices, but I believe that Boston is just a little better off than some other markets in this respect, particularly New York and Philadelphia. Nothing to brag about, but still it keeps us feeling a little better.

The public parks of the country will

blossom again next spring as they did in days before the war, great numbers of tulips having been planted this season. Not only have tulips been plentiful and reasonable in price, but the late fall has offered an unusually good opportunity for planting them. Thomas Phillips, of Wilkesbarre, Pa., says that he has never seen a time when tulip bulbs could be planted so late to good advantage. In his town the bulbs are usually planted about October 20, but this year work has been carried on much later. Some 16,000 bulbs have been set in Wilkesbarre.

I was glad to find Mr. James McHutchison back at his desk in New York after his long and tedious attack of illness. I understand that he has had to make his return to business on the installment plan, as it were, coming in only a few times a week at first, and spending only a short time at active labor. I have no doubt, though, that his presence has been a big incentive to all to do their best work. Certainly the way in which his many friends have greeted him has proven the high esteem in which he is held.

The McHutchisons have had large imports of bulbs. Japanese lilies have been the last to arrive, and not long ago sixteen carloads came in, the bulbs quickly going out again on their way to buyers all over the country.

THEY HELPED BOOM BOSTON FLOWERS
J. Cohen, Wm. Penn, Elijah Gorney, John Dowd, Ben Snyder.

Unfavorable weather has worked a hardship, I am told, on the sweet pea growers in California. The W. Atlee Burpee Co. was among the sufferers, and I understand that hardly more than half the usual crop will be marketed from the great 3,000-acre sweet pea farm at Lompoc. This is to be regretted, but when a firm does such an extensive business as does the Burpee Co., with fields both east and west, it is bound to occasionally feel the effects of adverse weather conditions.

There is often much discussion among florists and growers as to the best dahlias for commercial purposes. During the past season, I think that Jean Kerr has maintained its high position as an unrivaled free flowering moderate sized show dahlia for cutting. Jean Kerr is a Burpee production, and has about all the merits which can be desired. Other dahlias which have shown up well, according to experienced growers, are King of the Autumn, Maude Adams, Delise, Lyndhurst and Mme. Van Den Daele.

Besides the fine blooms of Maine Sunshine and its parents, Crystal White and Mrs. C. W. Ward which Mr. Strout showed at the Boston club meeting recently, he showed a small vase of the new red which will be introduced by Baur & Steinkamp, named Edna and originating with Nick Zweifel of Milwaukee, also one of Baur & Steinkamp's white seedlings which they have named Harvester. Both showed up very well, and if I understand correctly, both are said to be good growers and producers. There was also a vase of Ruth Baur with excellent color. It reminds me every time I see it of the old variety May Day. Another variety which was exceptionally good, both in size and length of stem, was Mr. Strout's White Delight. Anyone who grows Pink Delight would do well to follow this white sport.

NEW CARNATIONS

The following new carnations have been registered with the American Carnation Society, by Herman Schwarz, Central Park, N. Y.:

Glow Worm. Seedling cross. Brilliant red. Size, 3½ inches. Clean grower, producing finest quality flowers the entire season. Never splits the calyx.

Resolute. Seedling × Enchantress. Pure White. Size, 4 inches. Extremely prolific. Flowers have great substance. Unusually long stems.

Spring Glory. Pink Delight × Seedling. Deep pink. Size, 4 inches. Deep pink, verging on red in winter and

changing to rose pink with deeper centre in spring.

Mrs. H. C. C. Schwartz. Pink Delight Sport × Seedling. Shell pink. Size 4 inches. Exceptionally strong growers with very wide foliage. Extremely long straight stems.

A. F. J. BAUR, Secy.

W. H. JUDD FOR PRESIDENT Regular Meeting of the Gardeners' and Florists' Club of Boston

The regular monthly meeting was held in Horticultural Hall on Tuesday evening, November 16th. While the exhibition table was not so well taken care of as at some times in the past, some very good quality stock was shown. A. T. Rogers staged 32 varieties of named and unnamed single chrysanthemums, including those interesting types of Japanese quilled and twisted singles. W. N. Craig showed a collection of spray chrysanthemums and one vase of particularly well-grown and well-colored Yellow Garza, also two vases of Bouvardia Humboldtii; one the true Humboldtii and the other an improved form which is

W. H. JUDD

evidently of heavier growth with flowers that are larger and of better substance.

Officers for the ensuing year were nominated as follows: President, William H. Judd; vice-president, Harold A. Ryan; treasurer, James Methven; secretary, W. N. Craig. Ten names were proposed for the executive committee as follows: W. Burke, George Hamar, W. H. Golby, John Reid, A. K. Rogers, John R. Russell, L. J. Reuter, Herman Bartsch, George Butterworth and Robert Montgomery, five to be elected.

Interesting talks were given by Andrew Christensen and Capt. Moyse. The attendance was all that could be expected for such a stormy evening.

COLLECTING SLOW ACCOUNTS

How the Application of Psychology
Brought a Debtor to Terms

Collecting accounts is the bete noir of many a florist, and perhaps they will be interested in a scheme for making collections which has been worked successfully in another business where bad bills also collect rapidly. The plan is outlined graphically in "The Progressive Grocer" as follows:

"Can't be done," sighed the young business man, "tried everything. He just won't pay 'till he gets ready and the more methods you try, the harder he resists."

"Tried the psychological method?" inquired the Senior Partner.

"The which? What sort of a bill collecting scheme is that?"

"Making him use his imagination," was the answer. "I have used it more than once. I had a chap on my books once who had owed me \$42 for six months. He was perfectly able to pay it. He wasn't a dead beat. I didn't want to sue for any such amount—probably I would have spent twice the amount getting it. Collectors couldn't get to him. He didn't answer letters. Telephone calls were cut short in the middle.

"So I sent him a bill—plain bill, in an ordinary envelope. Two days later I sent him another bill, in a plain envelope. Two days later I sent him a bill, special delivery. Two days later I sent him a bill by registered mail. He had to sign for the latter, of course. In other words, I made him know that I knew he had received the bills. Just that and nothing more.

"The next day he paid it. I hadn't threatened a thing. In fact I had nothing with which to threaten him. And I don't know to this day what his imagination suggested was going to happen next. But his course of reasoning was to the effect that if I had taken all that trouble to make sure that he received the bill, and to have unquestionable evidence that he received it, I was evidently going to take action of some kind. Whether he expected me to sue him with a lawyer or hold him up with a gun I don't know. Whatever it was he imagined, it was effective. Maybe he couldn't figure out anything and thought he'd rather pay the bill than face the unknown. Try it!"

HERE IS A NEW ONE

At a recent convention a speaker told the following: A certain seed dealer who was a very slow payer sold all the garden cultivators he had in stock so sent his jobber an order for another shipment. The jobber

wrote back saying. "Can't ship cultivators until you pay for last lot." The dealer then wrote his dealer, "Cancel order, can't wait that long." —American Seedsman.

NEW FLOWER FOUND

According to a newspaper clipping, Miss Dorothy Raymond, of Gowanda, N. Y., has discovered a flower never before found in America, but being

native to France, Australia and Switzerland. The Cornell leaflet, it is understood, will soon be issued giving a description and illustration of the flower. It is probable that seeds of the flower were brought to this country on hides shipped to the glue factory at Gowanda. These hides were spread out to dry in an adjacent field, and it was not difficult to believe that the seeds were given their start in this way.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

In England Dorothy Perkins, Minnehaha and some other American roses make a fine showing in August, I wish that were true here. Rambler roses in bloom through August and into September would be a wonderful acquisition, and no doubt they will come. Mr. Thomas has been working for some time in that direction. Dorothy Perkins is naturally rather a late bloomer, however, and very persistent, so that it is one of the best where a late season of flowering is described. Lady Gay is very much like it. In fact, even rosarians are often unable to distinguish between them, but it seems to lose its flowers a little earlier. The English growers are fond of Minnehaha, which was given to the world by Mr. Walsh, of Woods Hole, in 1905.

They like its large, open bunches of flowers, and find it well adapted to arches or pergolas. As one writer describes it: "The pendent flowers when one looks up produce a diaphonous effect which is sometimes very pleasing." Babette is another Walsh production which is seen very often in America and yet is popular in England.

According to a recent number of the Kew Bulletin a specimen of heather (*Calluna vulgaris*) has been reported to the editor, which bears both purple and white inflorescences on the same plant. It is not uncommon for cases of albinism to appear in many species, but it is more rare for a single plant to produce both albino and nor-

mal flowers. It would be interesting to learn if any of the gardeners in this country who are growing heather have noticed any instances of this sort. It wouldn't be strange if they appeared here.

The editor of the American Botanist shows that such cases are known in other families. He cites the fact that a cross between the purple flowered alfalfa, *Medicago sativa* and the yellow flowered *Medicago falcata* results in individuals that may bear yellowish white, deep yellow, lilac and greenish violet flowers.

The English papers continue to make many valuable comments on the Allwoodi carnation which was originated on a famous nursery across the water several years ago. This plant has been introduced into the United States, although so far it is very rare in gardens. I am fortunate to have several varieties, and though they have not become very well established as

Forced Darwin Tulips

yet, they bloomed fairly well during the past summer. It remains as yet to learn how well they will endure the winter. If they go through safely, I believe that this will be a really valuable addition to our border plants. It flowers all through the summer, and I cut a well developed blossom the 5th day of November.

It seems to me that the fulsome praise bestowed upon the plant by English writers is not wholly justified, but perhaps I have not seen the flowers at their best as yet. The Allwoodi carnation is really a cross between the carnation and the garden pink. It is not very double, but fairly large in size, and fragrant. I have been wondering if the plant would not flower freely in the house during the winter, perhaps adding to our rather abbreviated list of really good house plants. I am tempted to try the experiment this season myself.

The English gardeners make much more use of carnations in their borders than the gardeners in this country. They have just added a new white clove carnation to their list. Its delightful perfumes as well as its chaste beauty is making it popular.

It is interesting to learn the value placed on Luther Burbank's accomplishments by writers abroad, about which accomplishments there are many differences of opinion among horticulturists in this country. A correspondent in Gardening Illustrated says: "We have heard a great deal of Mr. Luther Burbank's creations in lilies, as in other things, but as far as my experience goes they are not likely to take high rank. Those first sent to England were a mixed lot. Crosses between L. Parryi and L. pardalinum are often made, but they do not seem likely to occupy a permanent place in our gardens."

The writer then goes on to tell of lily crosses which have proved worthwhile. He speaks of the Nankeen lily, *Lilium testacum*, also known, I believe, as *Lilium excelsum*. Now the exact origin of this lily is really unknown, but probably it is pretty safe to say that the parents were the Madonna lily and the scarlet Turks Cap, although it grows taller than either of these lilies, a well established plant often becoming six feet or more high. There are parts of America in which this lily can be grown satisfactorily.

This past summer I had the pleasure of flowering *Lilium Wilmottii*, which is being put out by Mr. Horsford, of Charlotte, Vt. It isn't as im-

pressive a flower as I had expected, but I think that in a group its bell-like flowers would create a very pretty effect. It would seem to be an excellent plant for forcing. I am sure it would make a charming greenhouse subject. I wonder if the time isn't coming when the lily will receive as much attention as some of the other flowers, like the peony, the gladiolus and the dahlia. The field is a large one, and the members of the lily society will certainly have a most enjoyable experience in growing the many species and varieties offered, and learning more about the habits and cultural requirements of the lesser known kinds.

I am glad to learn that Ibolium privet is being widely distributed, and likely to become very well known in a few years. From what I have seen of this plant, it justifies all that has been claimed for it. A hybrid of *L. ovalifolium* and *Ibota*, it is a handsome plant, and apparently able to withstand the severest winters without harm. Certainly last winter was as cold as we are likely to experience, and Ibolium privet went through it at the Arnold Arboretum and in other places in splendid shape.

It seems pretty certain that Ibolium will prove as hardy as *Ibota*, which gives it a wide range of usefulness. Its sturdy growth impresses all who see it, and I like the bushy way in which it grows, filling up splendidly at the bottom, something which is most acceptable in a hedge plant. It can be made into a compact impenetrable hedge, or given a formal touch. At the same time it looks well when allowed to grow naturally, for then it becomes a tall, graceful shrub, producing lilac-like blooms in profuse clusters and following the flowers come decorative fruits.

Some people seem to think that Ibolium privet is designed wholly for use as a hedge plant, but while its adaptability for hedges and its hardy character make it an excellent substitute for California privet, yet its value as a specimen plant is not to be overlooked. At least this is the opinion of it which I have formed.

It occasionally happens that the roving gardener rambles onto the wrong road. That was the case a few weeks ago when he spoke of a garden where the Regal lily was growing freely, and used as an illustration a very handsome picture of a garden which was described as a part of the Bayard Thayer estate at Lancaster. Now while the Regal lily makes a splendid show on the Thayer place, as the roving

gardener can testify, this particular picture was made not there, but at the equally fine gardens of H. T. Hayward at Franklin. The Regal lily is a feature of this garden, which is one of the best known in Massachusetts, and is kept in splendid condition under the direction of Mr. Frank Anderson, the superintendent.

GARDENS OF OTHER DAYS

And Some Suggestions for Gardens of the Present Day

At a recent meeting of the famous Park Garden Club of Flushing, L. I., Mrs. Henry V. Condict gave a most interesting talk about gardens old and new. Among other things, she said:

"There are two types of gardens—the formal garden and the naturalistic garden," said Mrs. Condict. "As far back as 4000 B. C. an Egyptian nobleman had his formal garden depicted upon the tomb. Babylon's famous hanging gardens must have been along these lines. Ancient Greek and Roman gardens were also of the formal type. Pliny the Elder, in his writings 2000 years ago gives minute descriptions of his villas and gardens.

"In Pompeii we can see the formal garden in the central court of one of the restored houses. In ancient days gardens were used as living rooms. After the fall of Rome gardening slumbered for centuries. With the awakening of artistic activities which we call the Renaissance, the classic garden was again restored.

"The Italian gardens in the days of Lorenzo di Medici is considered the highest type of its art. Later France and England copied this style. The colonial garden is a modification of the formal type. The early settlers brought their love of flowers with them. The flowers most used by them were the hardy perennials and self-sowing annuals.

"The naturalistic garden is the one most popular today. Flowers for cutting and also for effect, if carefully chosen, will produce bright color in beds and borders all through the season. In planning the garden great imagination must be used—select, adapt, adjust and harmonize. Do not copy, but endeavor to bring out original ideals. Do not attempt too much. Study your place as a whole, the house, the lawn and the garden.

"Every plot of ground is much like the human face, it has some individuality which is better emphasized or obliterated. For a succession of bloom study the plant families. Bulbs can be in continuous bloom for two months by planting crocuses, scilla, hyacinth, early bedding tulips, cot-

tage, Darwin and Breeder tulips. The same hold true with the phlox, which will bloom for five months with careful selection. The iris, roses, lilies and peonies also furnish foundation for continuous garden bloom. Most of the nurserymen's catalogues furnish successive information.

"We choose stocks, snapdragon, sweet alyssum, pansies, candytuft and mignonette because they will continue to bloom after a light frost. Chrysanthemums we need to make the garden gay long after the heavy frost has killed every other flower." Mrs. Condict exhibited numerous views of her garden which with careful planning is a mass of bloom from early spring until the snow flies.

Prices on Christmas Greens are subject to change and will be quoted on application.

NASSAU COUNTY SOCIETY

The regular monthly meeting of the Nassau County (New York) Horticultural Society was held on Nov. 10th. President Thomas Twigg occupied the chair and William Allen was elected to active membership. Two petitions for active membership were received. There were some very fine blooms of chrysanthemums on exhibition and the Peter Smith special for assistant gardeners brought out much competition. The judges awarded first for three pink chrysanthemums to James McCarthy; first for three yellow chrysanthemums to James McCarthy; first for three white chrysanthemums to James McCarthy. Arnold Gatticar won first honors for table decoration; Henry Michelson second and Gorman Bruce third. John Forbes, Wm. Churchill and Joseph Robinson did the judging.

The treasurer, Mr. E. J. Brown gave an interesting talk about his trip and horticultural conditions across the pond. A smoker will be held after the next meeting. A hearty vote of thanks was given to Mayor Burns and the city council for opening the Chrysanthemum Show. The annual meeting will be held on December 8.

PERESKIA ACULEATA

Genus of the Cactus Family Make Good Greenhouse Climbers

Pereskia aculeata, its variety *Godseffiana*, and *P. Bleo* may be recommended as greenhouse climbers, growing luxuriantly and producing an abundance of flowers despite low temperature and drought, says a recent bulletin of the Missouri Botanical Garden. These climbers are indigenous to South America, in regions subject to dry seasons. The plants of this genus are rarely regarded as true cacti in view of their foliage characteristics which resemble the ordinary type of climbers. Upon handling, however, their cactus habit is soon discovered through the spines which are arranged along the various nodes at the base of the leaves. In the young growth they are short, rigid, bicornute and green. In the woody branches they are arranged in clusters upon a cushion of downy pubescence and are dark brown in color. In *Pereskia Bleo* the spines are more prominent, being fully two inches in length. This plant is a much stronger grower than *P. aculeata* and produces larger leaves and branches. The flowers are mauve-pink and at a distance may be mistaken for those of the common briar. The spines of this and other cacti have been tried as a substitute for steel needles for phonograph machines but have proven too brittle.

Pereskia aculeata is a common species in cactus collections, being used as stock on which to graft various other cacti. The favorite Easter cactus, *Epiphyllum truncatum*, is grafted upon the strong-rooting *Pereskia* stock to influence the growth and

a greater production of flowers. Well-ripened wood in lengths varying from six to ten inches is selected for the grafting stock. These hardwood cuttings will root readily in sand in the ordinary propagating bench, or if the operation is tried in the home, by placing a glass covering over the pot. The old spines are used to secure the detached Easter cactus to the stock of *Pereskia*. *P. aculeata*, from the standpoint of a climber, is very satisfactory, perhaps the only objection being its deciduous habit during the winter. This, however, is counterbalanced by its ornamental as well as edible fruit. When ripe it resembles the gooseberry and is used for making jelly and drinks.

The branches are of a woody texture when mature, bearing clusters of spines about an inch long. The young shoots have but two short, horn-like

spines which are slightly curved and of a dark green color. The flowers are pale yellow, about an inch in diameter, and hang in long festoons five to six feet in length. The large specimen in the succulent house at the Garden is so fragrant that its perfume penetrates into the economic house. This plant has frequently been called the climbing orange blossom.

The variety *Godseffiana* possesses leaves colored crimson, yellow, and green upon the upper surface. When first introduced at the Garden it was planted in the experimental plot with a view of using it as a bedding plant in this section of the country. Experience showed, however, that its foliage turned to a greenish yellow, becoming deciduous in the fall. When grown in a greenhouse with combined heat and moisture its tricolors are very prominent.

\$6,000 FOR APRIL SHOW**Plans of Massachusetts Horticultural Society—Lectures at Each Exhibit**

Albert C. Burrage is now president of the Massachusetts Horticultural Society, having been elected at the annual meeting at Horticultural Hall. Mr. Burrage, who has won wide fame in the horticultural world by his exhibits of orchids throughout the past year, is a powerful executive, an excellent speaker, and thoroughly interested in horticultural matters. The Society should prosper under his direction. The other officers elected are as follows: Vice-president, Thomas Allen; trustees for three years, William C. Endicott, Walter Hunnewell, Thomas Roland and Mrs. Bayard Thayer; nominating committee, Oakes Ames, George E. Barnard, Wilton B. Fay, Duncan Finlayson and Thomas Roland.

The trustees have voted to appropriate \$6,000 for the April Rose Show. If all plans are carried out as formed, this will be one of the most notable shows ever held in the country. The American Rose Society has agreed to co-operate in making the show an unequalled success, and no doubt the large money prizes will prove a stimulus in bringing to Horticultural Hall some of the finest rose exhibits ever staged there. During the year there will be four shows besides the April show. Doubtless there will be regret in some quarters at this small number, because many people feel that it is better to have numerous small shows which will arouse the interest of the amateur. All the shows to be held should be exceptionally good, however, and the American Peony Society, as well as the Massachusetts Gladiolus Society will help in making them a success.

Attention should be called to one important innovation to be featured at the shows the coming year. Miss Marian Roby Case, who has taken a keen interest in the exhibits for several years, has contributed a thousand dollars to be used for lectures. These lectures will be given in connection with each show, the speaker being an authority on whatever flowers are featured at each exhibit. He will give a talk at a specified hour, and possibly will also act as docent in the exhibition hall at other times during the day. It is believed that this feature will add greatly to the popularity of the shows, and help to increase the attendance. Certainly it will be appreciated by flower lovers and those who are growing flowers. Of course these lectures will not conflict in any way with the regular series to be held during the winter, and it is quite prob-

able that the plan followed last year of having a single speaker give a course of talks will be followed again this season.

FOREST TREES

Today I have been walking through the woods at Hillcrest seeing all their beautiful colors, the reds and tanny browns of the oaks. The yellow of the great sycamore by the brook, the plum of the ashes, the golden glory of the tulip tree, all set off by the dark dense green of the red cedar. Above all rose the forest of the stately white pines.

As I went among these trees I thought of how they resembled people. No tree being quite true to type, but each having its own idiosyncrasy. Most of their marks came from the way they were forced to grow as children in the forest, some were bent this way, some that. Few trees were growing straight up in the air with their full equipment of branches.

Then came the thought of how much more beautiful our forests are with their great variety of trees, than are the planted woods of Europe. The natural growth of our forests show the delight of the trees to grow as a Californian from San Diego once said of our wild flowers, "At home we can plant flowers and make them grow, but

in the woods of New England they spring up from the very joy of existence."

The woods of Hillcrest are surely rich with the native flora from the violets and moccasin flowers in the spring to the pyrola and loosestrife in the summer, and now we are encouraging the perennial asters.

M. R. CASE,
Hillcrest Gardens.
Weston, October 24.

GENERAL NEWS NOTES

J. Olesky has opened a new flower store on Warren street, in Glens Falls, N. Y.

Jack Trepel has established another flower shop at the corner of Flatbush avenue and Lenox road, Brooklyn, N. Y. Mr. Trepel now has a remarkable chain of flower stores, the new one being the ninth controlled by him in Brooklyn and Queens.

Geo. B. Thomas, who recently passed away in West Chester, Pa., at the age of 83 years, was long a member of Hoopes, Bro. & Thomas, the well known nursery concern in West Chester. Mr. Thomas had many friends in the trade who will be pained to hear of his passing.

WATERING ORCHIDS

Watering, always an important detail in Orchid culture, must be carried out with care and discretion, and the condition of each plant studied before applying water, says the Gardeners' Chronicle. Plants producing their flower spikes must not suffer from drought, and the same remark applies to those that are growing and rooting freely, but any that have completed their season's growth should be afforded only sufficient moisture to maintain the pseudo-bulbs in a plump, rigid condition. With the bulk of the repotting completed, an opportunity occurs to do any necessary cleansing of the houses, and to ascertain if any of the plants are infested with scale insects. In districts near large manufacturing towns, the glass on the outside needs washing two or three times during the winter. When this work has been done a start may be made inside, for dirty glass excludes light which is essential to plant life during the dull months of the year.

MISINTERPRETATION

Wabash, Ind.—C. E. Dittmer, editor of a local newspaper was hurrying to his office when he glanced at the window of a local flower shop and saw the sign, "Say It With Flowers."

"Great," he thought to himself and rushed into the building.

"Send some flowers up to my house," he told the florist.

"How about a nice spray?" the florist asked.

"Good, send it right up," the editor said.

When the work of the day was over the editor hurried home to celebrate his wedding anniversary. His wife glared at him.

"It may be a joke, but I do not appreciate it," she said.

The editor was puzzled. He had not tried to be funny. Then he looked around for the joke and found it. It was a "nice spray," bound with a black ribbon to which was attached a black rimmed mourning card. The florist had misunderstood the occasion.

Wrap the Pipes

It's economy to have all the main and return pipes wrapped with asbestos. When such pipes are left uncovered there is much waste of heat. The drums in the boilers should also be covered, and it is well to have the asbestos reinforced by wire netting so that it will not fall off. Mix the asbestos about as thick as mortar, and slap on the first few patches with considerable force. The more successful you are in stopping leaks of all kinds the better off you will be financially when spring comes.

It seems that there are rivals for the name **Presidential** of Harding among the orchids. At the Boston show one of Mr. Burrage's new orchids **orchids** was named the "President Harding," as has already been announced. Then at the Chrysanthemum show of the Pennsylvania Horticultural Society another orchid was named in honor of the president elect, although the name was given in a little different way, being the "Warren Harding" orchid. The "Warren Harding" is a cross between the Percipalina and Heliosa orchids. It came from the estate of Mrs. Fitz Eugene Dixon. An interesting feature of the show was the christening of the new orchid, which was placed on a stand over which hung a large silk American flag. The platform itself was covered with green moss, making a very pretty effect. After a few words of introduction, Mrs. Thomas Robins dipped her fingers in a small marble urn and sprinkled a few drops of water on the flower. It is pleasant indeed to have some unique feature like this introduced at the shows. In that way the monotony and precision of the exhibition is broken up, and a popular flavor given which is a help in attracting people who are interested only superficially in flowers but perhaps have the opportunity and the capacity to become real flower enthusiasts.

In the preliminary report of the executive **Quarantine** committee appointed at the conference of the horticultural and other societies in New York last June, a general survey of the **report** whole situation is made. Then comes some recommendations which are worth consideration. This report is signed by J. Horace McFarland, T. A. Havemeyer, Albert C. Burrage, James Boyd, Frederic Crane, Mrs. Francis King, Dr. George T. Moore, Frederic R. Newbold, Mrs. Percy Turnure, E. C. Vick, and John C. Wister.

It is pointed out by these distinguished horticulturists that various appeals by individuals and associations for

the modification of many apparent iniquities in the ruling of the Federal Horticultural Board have proved unavailing, and that as a result the beneficent research work of the Missouri Botanical Garden, the Arnold Arboretum, and other institutions has been stopped or disastrously checked. It is for that reason that the conference was called in New York, bringing together representatives of forty-five societies, including virtually all the amateur and scientific associations interested in promoting the study and use of ornamental and economic plants. It is also pointed out that the meeting favored adequate and reasonable quarantine, objecting only to inequitable regulations which amounted to the practical imposition of an embargo. The committee calls attention to the fact that Europe and Asia have furnished this country with many beautiful, rare and valuable plants, but that under the present quarantine they are nearly all barred. This seems in line with a report of the Bureau of Plant Industry submitted in 1918, which contained these significant words:

"The time seems to be at hand for the inauguration of a policy that would gradually result in the exclusion of all foreign nursery and florist stock." Such a policy is of course opposed by great numbers of people. The report of the executive committee mentioned expresses the confident belief that well equipped and carefully administered quarantine stations should be established at a certain number of ports of entry, such as San Francisco, Seattle, New York, New Orleans and Boston. Certainly it is no reflection on government officials to propose assistance for them in the gaining of information which must be gathered slowly to show the facts and effects concerning this plant quarantine, and the report makes this fact plain. The executive committee, therefore, proposes that a capable investigator be sent wherever it may be necessary to gain the required information, interview individuals, and in other ways gather the facts which can be adequately presented to the federal authorities.

Of course some funds are required to carry on the work, and subscriptions are being placed with the treasurer of the committee, T. A. Havemeyer, 50 Broad street, New York City. The membership of the committee itself is sufficient guarantee that the funds will be expended carefully and intelligently, and it is promised that none of the money will be used for lobbying or the obtaining of influence.

This whole question is one of tremendous importance to all horticultural interests of the country, and it is to be hoped that they will co-operate so far as lies in their power. The members of the committee are very glad to have any communications, whether suggestions or information, and they can be sent to best advantage to the secretary and attorney, Mr. Herbert W. Schlaffhorst, care of Massachusetts Horticultural Society, Boston, Mass.

We recently saw an excellent illustration of what happens when plants **Damaged Orchids** imported from abroad go through the course now prescribed by the Federal Horticultural Board. A collection of rare orchids had been ordered for propagating purposes. No great difficulty was experienced in getting a permit to bring in the plants, but they were sent to Washington and when they reached their destination in a New England city they were in such a condition as to almost bring tears to the eyes of the man who had spent several thousand dollars for them. Most of them will live, to be sure, but it will take two or three years to get them normal again, and the work which it was planned to do with them will be put back that length of time.

ROSES ALONG THE ROAD

They May Border the State Highway
From Buffalo to New York

Members of the leading horticultural societies and floral clubs in New York state are interested in plans to plant rose bushes along the state highway from New York to Buffalo. The subject was discussed at the meeting of the State Federation of Horticultural Societies and Floral Clubs held at Syracuse during the week of the state fair. At that meeting it was decided to make a beginning by planting rose bushes along the state road from Syracuse to Auburn.

This work will be undertaken by the Syracuse Rose society a member of the State Federation, the Auburn Rose society and the newly organized Skaneateles Flower club. It is hoped also to get the co-operation of the Chamber of Commerce of Syracuse and Auburn, the Finger Lakes association, the department of floriculture of Cornell University, the farm and home bureaus Pomona and subordinate granges of Onondaga and Cayuga counties.

Those named on the committee to enter upon the work are: Dr. Earl A. Bates, Syracuse, chairman; Charles H. Vick, Rochester; Frederick A. Danker, Albany; W. A. Adams, Buffalo; Werner Bultman, Syracuse; W. J. Cowee, Berlin, Rensselaer county, and Anton Schultheis, College Point.

Much of the land along the state highway between the fences and the road can, it is believed, be planted with roses. In many cases the fences themselves will afford suitable support for the bushes. The riot of color which such a scheme would produce will, it is believed, make a lasting impression upon automobilists and other tourists.

George Watson's Corner

"You in your small corner and me in mine."

There were no unusual features in the Fall Show of the Pennsylvania Horticultural Society except some fine new roses and an unusually fine showing of orchids. The Autumn Queen was of course there in all her glory and she made a brave showing all things considered. The country gentlemen all around Philadelphia have to a large extent shut up their conservatories for reasons of war economy and the number of exhibitors were therefore fewer than in pre-war days. This of course was well understood before the Society decided on a resumption of its big fall exhibition—famous the country over for thirty years, or to be exact, from 1886 to 1917. But after three years of no show at all in the city it was decided to do the best they could and resume as there was a keen public demand in that direction. The result has been unexpectedly good and the officers of the Society, the exhibitors and all concerned deserve great credit. Press reports and full details have already been published and fully digested so it is unnecessary to repeat these now except perhaps our personal opinion of some of the novelties. This can be reserved for the future when space and opportunity offers.

Isabella L., younger sister of the late Abram L. Pennock, one of the pioneer florists of Philadelphia, passed away at Lansdowne on the 16th inst., aged 91. The funeral services took place at her late home on West Essex avenue on the 19th and were attended by a wide circle of friends and relatives.

Edward Towill has a cross between the two well known and popular roses Milady and Hadley, which looks like a good one. The color is dark crimson very glowing in size, large and full like Columbia in size of flower and length of stem, a vigorous fine big crimson rose apparently perfect in all the essential qualities of a good commercial variety. The second or third day the blooms lose their sheen in color a bit after the manner of American Beauty.

Robert Scott & Son made a good showing of their new rose, Mrs.

CHOICE BEAUTIES, ORCHIDS, VALLEY, ROSES
and all Seasonable Varieties of Cut Flowers

Prentis Nicholl, a dark pink, large flower, full and well formed, strong stem and excellent foliage.

Mr. A. Currey of Portland, Oregon, one of the American Rose Society enthusiasts, gave an interesting lecture on Rose Production on the Pacific Coast at a meeting and dinner of the Rotary Club in Philadelphia on the 17th inst. He gave a very interesting talk and illustrated the process of originating new varieties from specimens furnished him by S. S. Pennock.

A fine new yellow chrysanthemum was on view at the Pennock market recently. It is named Mrs. William Kessler, and is a yellow sport of Early Frost, with the same habit, and if planted early, say middle of May, will be ready to cut by September 15th. This variety originated in 1917 with J. Hauck, Bloomfield, N. J. and is a good acquisition among the early varieties. Mr. Hauck says it does best if pinched from the second crown bud.

Martin Gannon has decided to go into the wholesale cut flower business on his own account. His location will be on South Mole street on the west side near Market. This location seems a wise selection. There are already three other establishments there—Baker, Meehan, and Heacock—and it is easily reached being close to Broad street Station.

Our old friend Adam Graham of Cleveland writes that he has changed his mind about going to Florida this winter. To please his daughters he has decided to make it South America instead. He will leave Cleveland in January.

Howard M. Earl of the Jerome B. Rice Co., sailed on the S. S. Lapland from New York, October 30.

Counting Up the Little Things That Count

The gutter and stop is cast iron, not wood

Isn't it so, that if you look after the pennies, the dollars will look after themselves?

Seemingly, then, it's the little things that count big.

This is exactly the way we look at greenhouse construction.

Furthermore, we have been accused of being too fussy about the little things.

That is to say, those who don't build their houses the careful way we do, have said as much.

For which saying we are indeed greatly indebted to them. It's about as complimentary a thing as they could say.

Next time you are in a Hitchings house, give it a searching look over, and see if you don't see care and attention evidenced **everywhere**.

See if every little detail has not been thought out and then carried out with exactness.

Look critically at all joints.

Look at the painting.

Look at the gutter leader pipe.

Scratch off a little of the paint and prove to yourself it is **copper** and not tin.

Now go outside and look at the gutter and its end stop. Notice first that it's not wood, but iron like the rest of the gutter; which you'll agree is exactly as it should be.

Now also notice that instead of stopping off short, how it extends over on the gable, giving a fine, finished effect.

Step inside again and scrape a little of the paint off the pipe leading from the gutter. You will find it is not tin or sheet iron, but **copper**.

If you, too, feel as we do, that it's the little things that count, then we would like to build for you.

You know we go anywhere for business, or to talk business.

MR. WILLIAM H. LUTTON

The many horticultural friends of Mr. William H. Lutton, founder of the present William H. Lutton Company, will be grieved to learn of his death on Tuesday, November 23rd, at his home at Ridgewood, N. J., as the result of an automobile accident early in November.

Mr. Lutton was born in Brooklyn, N. Y., forty-four years ago. He received his early training in greenhouse heating under the late Samuel Burns of Thomas W. Weathered & Sons Co., and in 1900 went into the greenhouse business for himself, incorporating in 1914 and serving until recently as president and general manager.

Mr. Lutton was an indefatigable worker, always on the alert for new ideas and improvements and because of his sterling qualities, progressiveness and thorough knowledge of his business, enjoyed an enviable reputation as one of the foremost authorities on the construction and heating of greenhouses.

Mr. Lutton is survived by his wife and daughter, his mother and six brothers and sisters. His many friends will learn with sorrow that during the past twelve months his family has been swept heavily by the tide of misfortune, he being the third to pass away, two daughters having gone before. All who knew him join in extending to his wife and family their deepest sympathy in the loss of so brilliant a member.

BOSTON

Thomas Roland, president of the S. A. F., and Past President Patrick Welch, have gone to Cleveland to attend committee meetings of the National Flower Show Commission. Henry Penn and Major O'Keefe have also been in Cleveland in connection with the publicity campaign of the S. A. F.

In order to have additional room Henry M. Robinson & Co. have rented a large amount of additional space on Otis street opposite their present establishment. This will give them a large amount of extra room for the holiday business, which already is very brisk.

Evidently William H. Elliott's long stay on the Pacific coast has done him much good, for he appears to be in splendid physical trim since his return. Mr. Elliott reports a very happy time in the west, and says that he enjoyed the many long tramps which he took through the California country.

At the meeting of the Boston Florists' Association Tuesday night William Elliot talked on his recent extended western trip.

THE TALK OF THE TRADE

Since the day of the yellow Carnation Eldorado, there has not been a really satisfactory yellow variety given to the trade. Several men have tried, but they could not measure up to what the grower had a right to expect; however we are reasonably safe to predict that the variety Maine Sunshine is going to make good in every way as a satisfactory commercial variety.

Unlike Eldorado, it is clear yellow; it is not striped or variegated, and has a depth of color sufficient to show it up under artificial light. As to character of growth, it is very good. Coming from a cross of Mrs. C. W. Ward and Crystal White, it carries constitution and clean habits that are especially satisfactory. It is of good size and good form; in fact, it resembles Matchless very much in both respects. And we mustn't forget that it has keeping qualities which are hard to beat. It won the Kerr special prize for the best keeping variety at the American Carnation Society meeting at Chicago in January, 1920, and this is quite remarkable when we take into consideration the long distance shipment.

Maine Sunshine also won the Dorner gold metal for the best new variety at the Carnation meeting in January, 1920. As a yellow carnation, it is being welcomed particularly by the private trade, but the commercial growers as well are taking it up and advance orders show that there will be heavy plantings this coming season.

One item of sales I heard about the other day shows how quickly a new firm can get a foothold. I was reminded of this by learning that ninety thousand violets were disposed of by Coombs, the Florist, in their new store in New Haven, Ct., a week ago Saturday. When we stop to think, that is a big quantity. Their well-appointed store started right out with a rush, and the business they are doing must certainly be gratifying.

I was surprised to find such a well-finished lot of Christmas plants at the Breck-Robinson Company greenhouses at Lexington. One who is not pretty well informed would not be apt to look

for Christmas pot plants at this range, but their grower, Stephen Donnellan, is a pot plant grower from the word go. He has in the houses now a fine lot of Begonias Cinninatti, Peterson and Melior, exceptionally well grown; ferns in 5 and 6 inch pots of Cleveland Cherries, besides a miscellaneous stock, all in good condition

I notice that at the recent convention of the Tennessee State Florists' Association at Memphis, Mr. W. H. Englehart, of Memphis, who was talking on publicity, emphasized the value of an attractive store front. He spoke of having plants and trees on the sidewalk, which made a public appeal be-

cause when passersby have once seen the green plants and trees outside the store, they always associate them with that particular establishment. Then when they see an advertisement of the store, they link the two together. I think there is much food for thought in this plan. Of course much depends upon the location. It cannot always be done. William O'Brien, of Boston, has done much to make his Beacon street store remain in the memory of the passersby by using plants all along the front of the building. He has an excellent opportunity for this sort of display, and has made the best of it, with distinct advantage to himself and his business.

Another important address at the Tennessee convention was made by Ira

New Carnation Maine Sunshine

C Harper, of the A. W. Smith Co., of Pittsburgh. Mr. Harper discussed collecting, which is of interest to every florist. Mr. Harper advised that when an account became ninety days past due, some one from the office should call upon the debtor, being of course familiar with the account and the items purchased, and carrying with him an itemized bill. This personal call makes it possible to learn of any complaint the customer may have, and in that way perhaps smooth out some unpleasantness which might otherwise cost the store a customer, as well as making collecting of the account difficult. Naturally the approach must be made in a courteous way, without any suggestion of brow beating. If the representative is the right kind of man, the call may help to make the customer a better buyer than before.

When the debtor remains obstinate, as Mr. Harper pointed out, it is necessary to use other measures, and one of the best, in his experience, was the sending of letters in a regular succession covering two weeks. These letters are politely worded, and of course vary each time, but help to keep the attention of the debtor, and grow decidedly firmer towards the end.

Usually they bring results, but if not, and as a last resort, the items are turned over to an agency which makes its collections by personal call. A tactful collector, by a personal interview, can sometimes learn from the honest debtor the reasons for non-payment, or the cause for complaint. Also he can as a result of his general experience form a fair estimate of the debtor's inclination or ability to pay.

Mr. Harper pointed out that it is best until the very end to make every effort towards keeping the good will of the debtor, on the principle that an old customer retained is better than a new customer obtained. The cumulative value of good will is a valuable asset to any store.

Mr. R. I. Gresham, of the C. A. Dahl Co., of Atlanta, Ga., is recognized as an expert on store arrangement, and accordingly his paper at the Tennessee convention was listened to with special interest. Mr. Gresham pointed out the value of a corner store so as to have a maximum window space, and said that it should by all means be on a level with the sidewalk, even one step being a disadvantage.

He preferred a curved glass window, with a marble base, and said there should be from eighteen inches to two feet above the sidewalk, with a floor of tile and provision for proper drainage. He liked a water connection in each window, and electric sockets for

decorations, such as lighted pumpkins for Hallowe'en displays.

He advocated concealed lights with reflectors, and preferred one large window, and small window, the latter for combining different colors of velvet and ribbon for choice arrangements of cut flowers. Said Mr. Gresham, "When it comes to advertising, spend your money on your windows first and let newspapers, postage, etc., come later."

Mr. Gresham emphasized the necessity of display ice boxes with as much glass space as possible, well lighted and with a tile floor. He said that each vase of flowers should stand out distinctly from the others, and he liked a reserve ice box for surplus flowers. He spoke in favor of the green willow, zinc lined vases lately introduced for displaying flowers.

In discussing the arrangement of a store, Mr. Gresham opposed the use of mirrors because barber shops and Greek restaurants have worked them over time. He said that in his own store he had a garden wall which was built in tapestry brick with a fancy design. This dull brick background shows the flowers and plants to great advantage. Garden gates with a combination of pergola and balustrade led to the rear of the store.

Mr. Gresham expressed a fondness for fountains in arranging flower stores if they are well built, of good design, and do not splash water on the floor. It should be arranged so that flowers and plants can be combined with it. He approved wicker furniture upholstered with tapestry cushions, and baskets and stands of willow rather than crockery. Flowers, like jewelry, he said, should have all the light obtainable, but shaded fixtures should be used so as not to let the light itself be seen.

When convenient he advised having the office on an upper floor in the balcony where there may be privacy for the bookkeepers. One other point which he emphasized was that in some convenient but not conspicuous position there should be an attractive mirror to be used by customers when pinning on flowers, etc.

It seems strange to talk about damage from snow as early in the season as this, and yet in some parts of the country a large amount of snow has fallen, and one florist who has suffered as a result is Mr. C. B. Shisler, of Williamsville, N. Y. The weight of snow was so great that the greenhouse, a building 30 x 100 feet, collapsed. The house contained chrysanthemums and carnations for the holiday trade, and of course the loss to them was heavy.

Charles Grakelow Talks to the Lancaster County Florists' Association

The 100th regular meeting of this association was celebrated by a dinner at the Penn Square Restaurant.

Mr. and Mrs. Reid, Mr. Charles Grakelow of Philadelphia, Mr. James Brown of Coatsville were visitors. Our own members were President W. B. Birvin, Mr. and Mrs. Elmer Weaver, Mr. and Mrs. Chas. M. Weaver, Mr. and Mrs. Albert M. Herr, Mr. and Mrs. B. F. Barr, Mr. and Mrs. Ira Landis, Mr. and Mrs. Lemon Landis, Mr. and Mrs. A. F. Strickler, Mr. and Mrs. Harry A. Schroyer, Mr. and Mrs. Abram Rohrer, Mr. and Mrs. Lehman, Mr. D. Irwin Herr, Mr. Edward Rohrer, Mr. Harry K. Rohrer and Mr. P. W. De Hertogh.

Mr. Grakelow in his usual felicitous and delightful style drove home a number of truths connected with our business that will stick in our memories until the 200th regular meeting of the club is celebrated.

Among other things he emphasized the fact that growers today interchange ideas for the betterment of the trade and appealed to have this further increased; also the fact that good flowers have a language of appeal to the flower buying public that inferior stock does not have; hence, the necessity of constantly working to have high grade stock.

Publicity also received his attention and it was presented with the true Grakelow enthusiasm that makes converts of all his hearers. To have heard his talk was worth more than twenty dinners as the hearty applause that followed showed.

Mr. Faust, of the S. S. Pennock Co., made a few remarks emphasizing the good points of the first speaker.

Mr. Brown, of Coatsville, followed along the same line with some personal points thrown in.

Mr. Ed. Reid had a few words on the conditions of trade and its application to the growers. Mr. Reid also exhibited a very handsome vase of the new rose "American Legion," which was much admired and highly commented upon.

The talks were so good that the toastmaster lost track of the time and at the last minute it was a hustle to get away in time for the train that was to carry our visitors back to the city of Brotherly Love, and I feel sure that they also carried back with them a feeling that Brotherly Love was not confined to the precinct of Philadelphia.

HENRY C. WOLTEMATE

Henry C. Woltemate, a retired florist, died at his home, at 335 East Mount Airy avenue, Philadelphia, at the age of sixty years. He is survived by his widow, four sons and two daughters. The interment took place Nov. 24th, in Ivy Hill Cemetery.

Mr. Woltemate did a general florist business in a suburban community

and on his retirement the same was continued by his sons. He was a man highly respected by all who knew him.

The Mel I. Webster Co., of Waco, Texas, has opened a flower store in connection with its seed store. It is in charge of Mrs. Hannah Wolfe Robinson, formerly with Wolfe the Florist. She knows the business thoroughly and has the good wishes of her many friends.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

At the peony exhibition in Reading last spring many peony growers met Mr. Harry A. Norton, of Ayers Cliff, Quebec, for the first time, and were greatly surprised to learn of the large collection of peonies to be found on his estate at Edgewater Farm. The fact is that Mr. Norton has opened the eyes of Canadian gardeners to the possibilities of peony culture in the Dominion. He has demonstrated that it is perfectly possible to grow nearly all of the good varieties in Quebec, and that, indeed, they are much easier to handle than some other perennials which are in general cultivation. The temperature often goes to 20 de-

grees below zero, and sometimes much lower in Quebec, and yet Mr. Norton's peonies go through the winter with practically no loss.

The faith of Edgewater Farm's owner in the ability of peonies to withstand Canadian winters was shown recently by his purchase of a root from Mr. A. J. Shaylor, of Auburndale, for which he paid \$100. This was a root of the variety Mrs. Harding, and in addition to the original price it cost him \$30 to get it through the custom house; some of the men who had the handling of the bulb en route thought that Mr. Norton must have parted with his senses as well as his dollars.

Of course they could not understand the devotion of a peony enthusiast to his hobby. As it happens, Mr. Norton, being a wealthy man, and the owner of a big business, is able to have in his collection all the best novelties, regardless of the price. As a result his peony display each year is one of the finest to be found anywhere on the continent. Last spring his gardener remarked with a sigh, "What a pity it is that our peony season lasts only ten days." "A mighty good thing I think," replied Mr. Norton, "for otherwise my business would go to pieces. As it is, I spend almost every waking moment in the peony garden as long as the flowers last, regardless of whatever other demands there may be on my time."

Mr. Norton dreams of peonies, however, when he isn't flowering them, and in order that his friends may

Cattleya Dowiana Memorial Julius Roehrs.

share his appreciation of the queenly blooms, he has issued a dainty little pamphlet on the peony which contains pictures of his garden and of several leading varieties, together with a good account of the peony's rise to fame, and a classification of species and varieties. Such men as Mr. Norton are doing much to put the Peony Society in the front rank of horticultural organizations in North America.

I am glad to learn that the New York Botanical Garden is going to have a tulip show next spring which will equal those to be found there before the war. Last year only about 9,000 bulbs were flowered. Next spring there will be more than 18,000, all of them Darwins or Breeders. The New York Botanical Garden is doing excellent work in increasing the public's intelligent appreciation of flowers and of gardens in general. Its efforts in this line will be patterned after in other cities.

Considerable interest has been aroused among orchid growers by the sale which has been carried on by Julius Roehrs Co., and apropos of this matter, I recently ran across a photograph of a *Cattleya* which was given to the world some years ago by the Roehrs people, and which impressed me as remarkably handsome. It is called C. Dowiana memorial, Julius Roehrs, being named in honor of the late Julius Roehrs, of Rutherford, N. J., and being a merited compliment to the memory of a man who did much during his lifetime to promote orchid culture in the United States, and who would, I am sure, have been greatly interested in the present orchid revival, if I may use that term.

This *Cattleya* appeared in a lot of imported Dowianas, and differs from the type in that the lip is gold and orange veined, without a trace of any other color. It was expected that this plant would prove of much value for hybridization in an effort to get an absolutely pure yellow *Cattleya*. I shall be interested to learn whether it has been used in this way, and how far it has filled that particular mission.

While the popularity of the lily as a garden plant is growing, the value of the lily, apart from a few kinds, as greenhouse subjects does not seem to be fully appreciated, at least on this side of the water. There are many lilies which can be forced splendidly, among them *Henryii*, *Auratum* and *Speciosum* in different varieties. *Speciosum* is perhaps the most valuable for the trade, and is being offered to

"Nyesmith, Boston"

some extent by florists, but all of these lilies are excellent for private growing.

Then there is *Lilium Regale*, which is just as fine for pot cultivation as it is for growing in the open, a fact which has been demonstrated by several growers in the vicinity of Boston, notably Mr. Anderson, of the Bayard Thayer estate at Lancaster. Mr. Anderson has had wonderful success in forcing the Regal lily, as has already been noted in these columns. Inasmuch as the Regal lily can be raised from seed and flowers in three years, it should prove exceedingly useful, and I trust that the day is not far distant when it will be offered freely in the markets as a florist flower.

All the lilies mentioned are stem rooting lilies, and when potting them room should be left for applying top dressing. It is best to keep them cool until they start growth, and they often are kept for some time to advantage in a cold frame. It is important to pot all lily bulbs as soon as they arrive, for it doesn't take much exposure to the air to cause them to deteriorate.

In the conservatories at Kew, England, specially good results have been obtained from *L. sulphureum* and *L. nepalense*, where the past season the stems attained a height of nine feet.

The Arnold Arboretum is doing a splendid service to horticulture the world over by distributing plants of *Taiwania*, the close relative of the California Redwood which Ernest H. Wilson found growing in Formosa on his last trip. About a hundred plants have been propagated in the Arboretum greenhouses, and in the past few weeks many of them have been sent away, some twenty going in one lot to England. There is now growing at the Arboretum under glass of course a specimen of this tree about four feet high. It is the most conspicuous object in the greenhouse and indicates that the *Taiwania* would be a very good plant to grow for conservatory decoration. Of course its term of service would be comparatively short, as it grows rapidly, and in a few years would become too large to be used in this way. It makes a very handsome plant, however, and it is very probable that this tree will in the course of time become a familiar object in botanical gardens and arboreta in various parts of the world, even if it is not cultivated widely on private grounds. Unfortunately it is not hardy in New England, but there is every reason to believe that it will thrive in the southern states, and a number of small plants have been sent south for a test.

Little Talks on Advertising

Coombs, the Florist, of New Haven, Ct., in a large newspaper advertisement announcing the opening of his new Flower Shoppe at 978 Chapel street, uses one of the most potent inducements for getting visitors into his place of business. He announced that at the opening five thousand Coombs chrysanthemums would be given away to all comers whether they made a purchase or not. Mr. Coombs used the opportunity to emphasize the quality of his stock by stating that these queen of flowers were grown in his own greenhouses. He then took the public frankly into his confidence, stating that he wanted to make friends and have an opportunity to show the Coombs New Flower Shoppe de Luxe—also the quality of the flowers and the kind of service the name Coombs stands for. There is a friendliness and intimacy in the way Mr. Coombs talks to his public which in itself makes a strong advertising appeal. He says in the course of his copy:

"We have been in the business, growing and selling flowers, for over fifty years in Hartford. We have two stores there, but we always wanted to come to New Haven, believing it a good field for our efforts, and now this wish is to be gratified. Come to our opening and meet us. We will give you a chrysanthemum as a token of the Coombs' welcome and appreciation."

If the same line of advertising talk is continued in the future, it is pretty certain that Coombs will be as successful in New Haven as he has been in Hartford.

By the way, it seems that shoppe, spelled with two p's and an extra e is believed to have some psychological effect on the buying public. In any event, I notice that Papes Bros., of Detroit, in announcing their new store also call it a shoppe. Perhaps the store is a shop when it is small and a shoppe when it assumes larger proportions. Be that as it may, Papes Bros. in their advertising are putting out some well designed copy, being attracted first by a half tone engraving showing a house of chrysanthemums, and playing up the announcement that the store is "Detroit's Largest Shoppe of Flowers." By calling attention to several unusual features, the interest and curiosity of the public is certain to be aroused, so that this

is a good form of advertising, especially when a new establishment is being opened.

When Papes Bros. pointed out that the equipment of the store is faultless, that the interior arrangements are a marvel of decorative artistry, and that quietly rich backgrounds contrast the colors of the massed flower displays, the reader inevitably accepts the final statement made by the advertisers that the new store is certain to become one of Detroit's show places. That being true, of course everybody will want to go and see for themselves what the place is like.

With every new store, the first important thing is to make the public familiar with the fact that it exists and is worth visiting. After that the advertising may be along the customary lines, describing the goods carried. It isn't enough, though, merely to announce that there is a new store in town. Some points must be stressed which will catch the public eye, excite the public curiosity and eventually attract the public purse.

George Watson's
Corner

"You in your small corner and me
in mine."

Fred Lemon's new rose, The Angelus, was on exhibition at the Pennock Market on the 27th ult. The flowers had been three days too long en route from Richmond, Indiana, but they were still in pretty good shape. This new seedling is a big one—in the Russell class for size and is a creamy white with a tinge of canary yellow in the center. Under artificial light it shows up pure white. The stem is graceful yet strong and upstanding, and the foliage is light green like Ophelia. This looks like a real acquisition and was examined with much interest by the rose lovers of this vicinity, all of whom were very flattering in their criticisms.

The Cornell game with Pennsylvania brought a number of distinguished visitors to Philadelphia for Thanksgiving and family reunion, among them the younger Sam Pennock, who is now as tall as his daddy and a hefty looking chap. He stayed over with his folks at Lansdowne a few days before returning to his studies at Cornell.

"It was midnight on the ocean,
Not a street car was in sight"—
So they elected Samuel S. Pennock president of the Chrysanthemum Society of America. Mr. Pennock is a Philadelphia man, but we had to await this news item until the Chicago papers arrived—a week later. We asked him, Was he so modest? He said No; he knew nothing about it until he saw it in the paper. The Kaizer will have to take his hat off to Charlie Totty!

1850 is chiseled in the rebuilt corner stone building of the Dingee & Conard place at West Grove, the pioneer rose establishment of America. Charles Dingee, the founder of the pioneer house, has passed away, but he left worthy successors. Patrick Joseph Lynch was also a genius along the same lines, and did wonderful work in deepening and widening what his brother-in-law had started. California and Indiana soon fell under his sway in addition to Pennsylvania. Today he seems to run the state of In-

diana, and his able lieutenant J. T. Headley looks after Pennsylvania. Between the two, the world may rest easy. It will get what's coming to it.

Our old friend, Anton Wintzer of the Conard & Jones Co. at West Grove, is still in the pink of condition and enthusiastic over his pet, the canna. The rose was first with him, and still is, of course as a business proposition; but the canna is his "pet." And he certainly has given the world some wonderful new developments in that line.

Anton's youngest son has started as a gladiolus grower, adjoining his father's place. He grew thirty acres last year, and it is an eye-opener to look over the millions of fine bulbs he is now sending to the big seed houses.

John C. Wister, the newly elected secretary of the American Rose Society, has established headquarters in Room 606, Finance Building, Philadelphia (where the P. H. S. were already located), and will be glad to see any one interested in roses or official business of the Society at that address.

They had a bit of scare at the Neissen flower market on the 29th ult., from a fire on the second floor of the building but no damage and business went on next day as usual.

THE MARKET

The flower market is feeling the prevailing depression to some extent but not so bad as in many lines of business. Roses are bringing from \$8 up. Carnations sell from \$6 to \$8. 'Mums that are good command \$3 to \$4. Poorer grades are worth \$2 to \$2.50. Stevia is coming in fairly well bringing 50 cents a bunch. Violets are very scarce and so are Easter lilies. Callas are scarce but can be bought for \$3.00.

CHICAGO FLORISTS CLUB

The new officers of the Chicago Florists Club are: President, Joseph Kohout; vice-president, A. T. Pyfer; treasurer, A. H. Schneider; secretary,

F. Lautenschlager; trustee for 3 years, August F. Poehlmann.

R. S. EDGAR NOW WITH McHUTCHISON

Mr. Robert E. Edgar of Waverley, Mass., lately manager of the Leominster Floral Co., Leominster, Mass., is now with McHutchison & Co. of New York in charge of the bulb department. Mr. Edgar is a brother-in-law of Mr. James McHutchison. Mr. McHutchison says that the season's deliveries of French bulbs and Dutch bulbs are cleaned up. Japanese lily bulbs are all in and shipments of Ma netti stocks and Valley pips are arriving in good volume.

DECEMBER

December, the king of the year, is here in his robes of royal ermine and his feast dating back to the old Egyptian days with their celebration of the winter solstice, when the days begin to lengthen.

All flowers have gone from our gardens, but search under the snow and pine needles and you will find the red berries of the partridge vine or mitchella. You can also find many subjects for the camera in the brown seed vessels of the alder and the cones of the hemlock. Our winters give beautiful studies of color in greens and browns. The snow powders the evergreens and outlines the bare boughs of the oaks, elms and maples. Let us go out into the forests and bring in our Christmas greens, the ground pine and hemlock. Bring home the Christmas tree and tell the children the legends that gather about it. The pretty story of how Saint Winfrid, when he hewed down the Druids' oak, found a young fir tree behind it pointing a green spire towards the stars.

"Winfrid let the axe drop, and turned to speak to the people. 'This little tree, a young child of the forest, shall be your holy tree tonight. It is the wood of peace, for your houses are built of the fir. It is the sign of an endless life, for its leaves are ever green. See how it points upward to heaven. Let this be called the tree of the Christ child, gather about it, not in the wild wood, but in your own homes, there it will shelter no deeds of blood, but loving gifts and rites of kindness.'"

Now as the children gather about the Christmas tree, the boys blowing their tin trumpets, the girls cuddling up their dolls, the grandparents tell these tales to them of the beautiful Christmas tree, the father lights the candles and mother brings in the baby to see their glow. The Christmas star shines from the top of the tree glorifying all the centuries which have passed since the Druids worshiped under the mistletoe and oak.

M. R. CASE.

Hillcrest Gardens, Weston.
December 1st, 1920.

TENNESSEE STATE FLORISTS

At the seventh annual convention of the Tennessee State Florists' Association at Memphis, the following officers were elected: President, W. H. Englehart, of Idlewild Greenhouses, Memphis; vice-president, Harold M. Joy, of Nashville; secretary-treasurer, G. M. Bentley, of Knoxville. It was voted to hold the next meeting at Chattanooga.

IMPRESSIONS OF AMERICA

What an Englishman Thinks of Our Flower Growers and Their Methods

It is always interesting to get the other fellow's point of view. And perhaps there is food for thought in the following contribution from T. A. Wilson in the Horticultural Trade Journal of London.

"This country is too big for a slow thinking Britisher to size up unless he has ample means and opportunities for getting around. Everything appears to be exaggerated; one might almost say the country itself is an exaggeration. Under the circumstances these notes may be similarly affected.

Just before Easter I saw some of the finest Cyclamen I have ever seen, and it is said that some growers can get plants about two feet through. The wholesalers are for the most part a really nice lot of fellows, but they are not all grouped together as at Covent Garden. Last spring a number of them forsook their old quarters and located under one roof at West 18th street. They have a depot to be proud of—plenty of room and well fitted up. Its only failing is that artificial light is essential, only one or two of the stores having daylight.

I have yet to see Carnations that will beat the Wallace brand, indeed, I am inclined to doubt whether real quality flowers ever reach the market owing to the bunching method and the heavy packing. Growers here prefer crates, largely cardboard, containing hundreds of blooms. Roses are packed in the same way, 100 being about the smallest pack, and this only in connection with long stem American Beauty and other big fellows like Premier, Columbia, etc. In the spring these Roses are certainly fine. I might mention that these big cases are more in keeping with Lowe and Shawyer's great Chrysanthemum cases, and, judging by the gentle handling they get from the express companies, they need all the iron bands to keep them together.

In Boston

At Boston I visited the wonderful Henry Penn and a few other florists, who apparently find the florists' business a money-maker. Boston appeals to me more than New York. It has an English touch with its narrow streets and moderate sized buildings. I also made a point of visiting Wm. Sim, the great Carnation grower, and Thos. Roland, one of the few really high-class plant growers. Both are, I understand, old Britishers, and it would seem that not a few of the best growers in the United States first saw the light in the old country.

The Wholesale Florists of Philadelphia

NEW YORK
117 W. 28th StreetPHILADELPHIA
1608 20 Ludlow StreetBALTIMORE
Franklin & St. Paul StsWASHINGTON
1216 H Street

Some of the wild flowers that flourish so abundantly in America are closely akin to what one cared for in the old garden. The Asclepias are everywhere, and many beautiful forms I have noted. Their peculiar seed pods are dried and used by florists. Rudbeckias, Golden Rod and Marsh Malows are three other prominent features. Hibiscus moschatas, is a glorious sight on the marshes. Incidentally, marsh land is abundant in these parts. For miles after leaving Jersey City one passes great stretches of land given up to coarse grasses and bullrushes, yet, if properly drained, this land would afford ample space for numerous factories and homes. It appears appalling that so much land near to the great city of New York should lay wasting, especially as part of it

juts on a broad river capable of carrying much freight.

Odd Notes

America leads on packages, everything is put up in packets. One may live on packeted goods, and to a great extent these packeted goods are an asset. They make the life of the housewife easier, and for the most part she needs relief for there is no help available.

The fruit and vegetable packages are varied in shape and size, not a few of them contain less than one might suppose. They are all non-returnable. Onions, Lettuce, Cauliflower, etc., all come in crates or chip baskets, as do all the fruits. Potatoes are largely shipped in barrels of three bushels, although the 100 lb. bag is a feature also.

ASK FOR CIRCULAR E

THE A. T. STEARNS LUMBER CO.
NEPONSET-BOSTON, MASS.

Reverting to sprayers, the English pneumatic is a far better tool than any I have seen. The sample I use, considered the best, is a wretched thing, and I would give anything to have my old Holder-Harriden with its long tube and adjustable nozzle.

For quick renovation of asphalt roads New York has it. By means of a roaring oil blast engine, which pumps its flames down a funnel arrangement, the old material is quickly softened and scraped away. The new follows quickly, and extremely well-made little engine rollers put on the finish.

New York is a great killing place. In July 68 were killed and over 300 injured by motor vehicles. For inconvenience and danger some of the elevated stations are good examples.

America is not a cheap place to live in, but it is extremely costly to die. I wonder how some folk manage to meet the charges.

A. S. Nodine, of Waterbury, Ct., recently suffered a \$3,000.00 loss as a result of fire in his greenhouses. The entire crop of chrysanthemums with which he was to supply the wholesale trade, as well as many other flowers, were ruined.

LET'S GO

Just imagine the rice-growers of this country running a co-operative advertising campaign, to stimulate a greater use for rice, by spending \$900,000.00 for the next three years, at the rate of \$300,000.00 per year, and then think, if you will, what the florists have been able to do on the small yearly appropriation. Their slogan will be "Eat more rice,"—another suggestion which probably grew from "Say it with Flowers."

Have you felt the business depression, as so many other lines are having at the present, with many of them pessimistic as to the immediate future?

Yet, in all sincerity, have not the florists cause for rejoicing in the fact that our business, at least with many, is holding up to last year, and a majority running ahead? Does it feel as though we have accomplished something unusual to be able to make this statement that something was indirectly the cause, and wouldn't you like to give the National Publicity Campaign, backed up by local advertising, part of the credit for this condition, especially where all other lines are falling behind?

Was there ever a time in the history of flowers, when so much energy was put into the printed word to create

more sales for the more general use of flowers and plants and has not the effect made it worth while?

Our campaign has had to rest temporarily, for the lack of funds to carry on the work, and your committee hopes to start as soon as the amount necessary is available, and perhaps this might serve as a reminder to many who, as yet, have not sent in their subscriptions for 1920, so that we may make up our budget for 1921.

The publicity committee has adopted the best policy for the future, in not making any expenditures until the fund is big enough to go ahead. Much of our recent success in selling flowers has been due to the co-operation given by the trade generally, and we must keep the momentum moving, or it will be a much harder task to start again, if we should discontinue for too long a period.

The committee on publicity will soon make permanent plans for the near future and every branch of the business will be interested in its outcome.

In the meantime, send in your subscription for 1920, to the Secretary's Office, so that the campaign may have proper financial support, and you will have still greater results from the campaign which has been so fruitful to all who have participated. Surely, if the rice-growers of the U. S. A. can raise nine hundred thousand dollars for three years, the florists who have more at stake, both from an investment standpoint as well as being in greater numbers, should be able, in the near future, to do almost as well, particularly, where we are our own distributors.

Will the florists be big enough to see advertising as a potential factor in the marketing of their product, as have the rice-growers, and as to the possibilities—we have the greatest opportunity, providing we all pull together, and being optimistic on the future of our business, let's say, "go to it."

Your check and your co-operation are all we need to make for further success.

Will you do your part? What is your answer?

HENRY PENN.

Chairman, Nat'l Publicity Campaign.

NEWS NOTES

Mrs. A. E. Newell and son George are making extensive improvements to their greenhouse on Riverside St., in Houlton, Me. These improvements will give them more room and make it possible for them to carry on a larger business.

Wilber Erickson has opened a new flower shop at Manistee, Mich.

Men I Like to Meet

A number of years back, Mr. Eber Holmes brought himself into prominence through the excellent quality of rose stock that he produced at the Montrose Greenhouses, and rose men in particular, as well as all who are connected in a commercial way, are interested in what Mr. Holmes is now doing as superintendent of the Halifax Garden Company. These greenhouses were only partially at work during the past few years, and Mr. Holmes found a man-sized job on his hands when he went there last spring, but he has shown that he was capable of taking hold of this range and whipping it into shape in quick time.

It is still early in the season to expect a great deal, but the houses, one and all, are in very promising shape and the stock coming into the market shows quality in every way. Mr. Holmes is a genial person to meet, an interesting man to talk to, and one who is interested in his profession in every way. His success with Mignonette so early in the season, even though it is a side crop with him, is something to be proud of, and I predict very satisfactory results both to the Halifax Garden Co. and to Mr. Holmes during his connection there.

Mr. Eber Holmes

HOW MANY NURSERYMEN ARE THERE?

Boyd's City Despatch, the leading compiler of mailing-lists, offers the following lists in its 1920 circulars:

7,444 Nurserymen;
339 Nurserymen worth over \$50,000;
790 Nurserymen worth over \$1,000.

In other words, according to Boyd's, there are 7,444 "Nurserymen" in this country, 6,654 of whom are rated as being worth less than \$1,000!

Will Christians, of the Allen Greenhouses, Hudson, N. Y., has opened a new flower store at 426 Warren street.

NOW MOVING

Our Bulletin Frequently Throughout the Season Offering:

HORTICULTURE

Established by William J. Stewart in 1904

Vol. XXXII

December 9, 1920

No. 20

PUBLISHED SEMI-MONTHLY BY
HORTICULTURE PUBLISHING COMPANY
 739 Boylston Street, Boston, Mass.

EDWARD I. FARRINGTON, Editor

ADVERTISING RATES:

Per inch, 30 inches to page..... \$1.50
 Discount on Contracts for consecutive insertions, as follows:

One month (2 times), 5 per cent.; three months (6 times), 10 per cent.; six months (12 times), 20 per cent.; one year (24 times), 30 per cent.

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, \$1.50; To Foreign Countries, \$2.00; To Canada, \$1.75.

It still remains very difficult to get white paper in Boston except at a ruinous price. For the present, therefore, or until the situation improves, HORTICULTURE will be published twice a month instead of weekly. We trust that the larger amount and improved quality of material used in each issue will make up for the decrease in number.

Rotarians Evidently Rotary Clubs the country over include in their membership many members of
and the florists and nursery trade. It is interest-
Flowers ing, too, to find that these clubs are giving increased attention to horticultural matters.

It was at a meeting of the Richmond, Indiana, Rotary Club that the gold medal from the American Rose Society and from the City of Portland, Oregon, were presented to E. G. Hill, for his famous Columbia rose. Mr. Jesse A. Currie, of Portland, who made the presentation speech, later went to Philadelphia, where he gave a talk before the Rotary Club of that city on "How New Roses are Made." Mr. Currie no doubt felt at home in Philadelphia, for he formerly was employed in the newspaper business there, not becoming interested in roses until after he moved west. Now he is famous the country over, and has succeeded in changing the little light pink brier rose to a brilliant scarlet creation by crossing it with Gen. Jacqueminot. From this production he has several seedlings which he hopes will develop into an oil rose, thinking that perhaps it will be possible to produce in the United States a high grade Attar of Roses, so that this country will not be dependent upon France and Bulgaria. This, at least, is a report which came from Philadelphia, following Mr. Currie's talk.

To get back to the matter of Rotary Clubs, we find that at Batavia, N. Y., recently, James M. Pitkin, of Newark, N. J., spoke at a lecture given by the Club. Mr. Pitkin is a nurseryman and the development and growth of the nursery business was the subject of his speech. It is evident from all this that people outside the trade are beginning to show increased interest in horticultural matters of all kinds. This is something for general self congratulation.

Buffalo's Enterprise

Buffalo recently saw one of the most successful municipal chrysanthemum shows ever staged. Fifty thousand flowers from the Park Greenhouses were on exhibition for ten days and fully 150,000 persons passed through the hall. On one single day, a Sunday, 31,000 visitors were counted at the door. The show included a Japanese garden scene which was remarkably effective, and during the show there were organ recitals both afternoon and evening. Buffalo has set the pace in matters of this kind; its flower shows have become famous the world over. It is well that they are having the support of the city florists, for shows of this kind are a tremendous asset to any municipality and must inevitably go a long way towards increasing the income of all in the trade. May the time soon come when other cities will follow the excellent example which has been set by Buffalo.

It was Samuel Merwin, if we remember rightly, who observed in one of his books that most
 Tell ly, who observed in one of his books that most
 about it people can't appreciate a good thing unless they are told about it. That is simply pointing

the moral of the old story about the duck that lays an egg without anybody knowing about it, while the whole barnyard is informed of the fact when biddy has contributed her share to the egg basket. In other words, advertising pays. Of course some advertising pays better than others, but advertising has to be very poor indeed not to bring some results. As one big advertiser recently expressed it: "I have stopped trying to key my ads. or to analyze them very carefully, for this I know: when I advertise I get business, and when I stop advertising my business goes."

There isn't much use in having flowers or plants or such accessories as a florist may carry unless people are told about them. There isn't much use, either, in carrying the highest quality of stock unless customers are informed how good this stock really is. Of course, if you are doubtful about your own goods your advertising is likely to reflect the fact in spite of all that you can do; but if you have faith in what you are selling you should be able to give the reason for that faith.

There is another matter, though, which sometimes is overlooked. While you yourself may know the quality of your goods and set it forth in well phrased advertising, your sales people may lack your knowledge and therefore your enthusiasm. If your advertising is to be profitable it should be backed up by a proper spirit within the store. Why not make it a point to train your sales people in the talking points of the goods which you offer. Go over with them all the statements which are likely to prove persuasive when talking to customers. Show them how they can get their customers interested and induce them to believe that they can trust you to give them the best the market offers. Show your people that your object is not to sell flowers alone, but flowers plus quality. In that way you will help to make your store stand out conspicuously among all the others. There is something about every line of goods which you handle that has a talking point. It will be to your advantage to learn what this point is and to show your assistants how to put it before their trade. Once the store force is led to realize for themselves the quality of the goods which they are handling, the easier they will find it to make the public appreciate the fact that they really are good.

Flowers Under Glass

Your cinerarias for Christmas should be in five or six inch pots by this time, and if you find that the roots have filled their pots, you will do well to give them manure water at least once a week. Have plenty of room between the plants so that they will not crowd. You will make a great mistake if you try to force cinerarias in a high temperature. They used to be kept as near as possible at 45 degrees for a night temperature with 10 or 15 degrees higher in the daytime. Give plenty of ventilation, and watch out sharply for green fly, which you can keep in check by fumigating every week. Of course cinerarias must have full sun to do their best.

Lilium speciosum has come into considerable favor with florists, and really makes a very satisfactory cut flower, as the blossoms last a long while. The bulbs should be planted as soon as possible. Use for best results a compost comprising three parts fibrous loam and one part well rotted manure. It is important that the drainage be good because next spring you will have to use a lot of water, and unless it runs off freely you will have trouble with your plants. You can pot up a single bulb in a six-inch pot, but it is better to use three bulbs to an eight-inch pot or six bulbs to a ten-inch pot. See that the pots have a

good soaking in water and that the earth is kept moist. A cold frame where the bulbs can be covered with six inches of soil is a good place for them, and after the weather gets very cold, you will need long manure or hay to prevent freezing.

This promises to be a fine season for Paper-white Narcissi, but they must have plenty of time to develop good roots before they are forced. When the root system is well established, they need from seven to eight weeks to reach blooming, at a night temperature from 50 to 58. They will need plenty of water when they have made root growth, and the only way to have flowers with substance and good stems is to give abundant ventilation. Syringe until the flowers begin to open, but then stop.

Do not wait until the green fly and other pests appear in your rose houses before you start to fumigate and spray. The work should be begun promptly. It is far better to use a weak spray often than a strong one occasionally, for strong sprays are pretty certain to do damage, even though it may not show up at once. Fumigate if you can the night before syringing. The advantage of this is that if any flies are left alive in the morning, they will be in a weak state and the stream of water will easily dislodge them. Be careful not to smoke or spray when the plants are dry for then there is much danger of burning. It is not advisable to use tobacco stems for burning from now on, but in houses that dry out well it is a good plan to apply some of the tobacco stems to the benches, scattering them well so that they will not be very thick. The tobacco stems serve a double purpose. They keep down the insects and also provide fertilizer.

Be sure that you have enough sand on hand to use for propagating during the coming season. On large establishments this propagating begins early, but it is not advisable to put the sand into the propagating houses until it is to be used because there is danger of its acquiring unwelcome visitors which will not be good for the cuttings when they are finally put in. It is far better to keep the sand in a clean shed until it is wanted, and then when it is put onto the benches, to put in the cuttings as soon as the sand is warm enough.

SALVIA SCLAREA

By Mrs. Francis King

Some years ago Mrs. Philip Martineau, then in this country from England, gave me a packet of seed of her special strain from the gardens of the Vatican of *Salvia sclarea*, the Clary of old English cottage gardens. The seed proved to have great vitality, every one germinated, and the resulting plants and flowers the following season—for this is a biennial with me—gave a peculiar pleasure to one whose eye and mind are singularly interested in the unfamiliar in flowers as well as in the old.

Some three feet tall, this *Salvia* has large crepe-like leaves of pale green; its color, from the bracts, is of a charming tone of pinkish mauve; and its upright branching flower-stems are entirely covered with bloom in July. Mine flowered first near *Lilium candidum*, with very nice effect; but the next season our plants were set below groups of *Delphinium belladonna*, and a prettier combination of color in the garden there could not be than this. It has such originality, such delicacy.

I notice in a recent number of *Horticulture* a fine illustration of *Salvia virgata nemorosa*; this flowers before *S. sclarea* here. It is remarkably fine in color and habit but a great contrast in both to the latter. Could one create a garden of *Salvias*? What an interesting experiment—if one could stand so much of the sage odor throughout the summer! Certainly the succession of purple, mauve and absolutely blue flowers of this family would be a garden interest distinct and distinguished. I wish the suggestion might be taken up by that rare person, a gardening man or woman, who has plenty of space and plenty of time. It is one of the fascinations of this art of gardening that life is never long enough for its pursuit, that the gardener's day is undoubtedly the shortest that can be experienced.

Some Hold Up Points Worth Upholding

Before you decide on the house you are going to build, hold up a bit, and consider some of these hold up points in Hitchings houses.

Take the columns for example. As columns, they are pipe like any other column. But there the likeness stops. Look at the centre illustration, and you see why.

No one else uses a foot base like that. It's a regular 4 way braced base, just such as is used in building a steel frame office building. When you dig the hole for it, it has a goodly sized flat bottom to set square and fair in place. When you put the concrete around, it has something to grip for fair.

The column clamps in place with a four bolt clamp, and a set screw. All of which means a bull dog grip and also that you have some way to raise or lower it to line it up.

At the top, the column cap is bolted directly to the plate that splices the rafter and carries the truss tie. The cap itself is bolted through and through to the column. So much for that hold up framing point.

Now for how the rafter and purlins are fastened together. Take a look at the cut below. See that knee brace, and the way it first bolts with 2 bolts to the purlin. Then bolts to the rafter. Then screws to the rafter

cap itself. Compare its strength with the usual piece of angle iron cut off in short lengths.

After which, let's go up the roof to the ridge, as shown at the right. That part of the rafter and truss from the column cap splice plate to the ridge is framed at the factory, all ready for lifting up into place. Plate No. 1 on both sides of the rafter, with its angle No. 2, is brought face to face, and bolted together.

No. 2 is the anchor for the truss rod which stiffens the ridge. No. 4 is the truss rod. No. 7 is the no leak ridge, so milled that the sash have sort of a pry tight movement, making it weather proof.

Now figure on the fact that the rafter from the column runs to the eave, where it bends, and continues straight to the cast iron post base, similar in design to the column base.

The rafter itself is not below grade to rust. It has no splice plates at the eave to cumber it up and cast shade. It's **one solid piece**, from column cap to base.

For the rest of them—both the hold-up and hold-down points—see our Supply Book. If you haven't one, send for it. And you know we go anywhere for business, or to talk business.

FORREST GETS WHITE MEDAL

Announcements of the Massachusetts Horticultural Society

The Trustees of the Massachusetts Horticultural Society have approved a Schedule of Prizes and Exhibitions for the year 1921 providing six exhibitions as follows: Grand Exhibition of Roses and Other Plants, April 6-10; Peony Exhibition, June 18-19; Rose and Strawberry Exhibition, June 25-26; Gladiolus Exhibition, August 13-14; Dahlia Exhibition, September 10-11; Autumn Exhibition, November 5-6.

They have also appointed the following standing committees of the Society for the ensuing year:

Finance—Walter Hunnewell, Chairman; R. M. Saltonstall, Edwin S. Webster.

Membership—Thomas Allen, William C. Endicott, Thomas Roland.

Prizes and Exhibitions—Thomas Allen, Chairman; J. K. M. L. Farquhar, Arthur Lyman, Thomas Roland, Mrs. J. M. Sears.

Plants and Flowers—T. D. Hatfield, Chairman; Douglas Eccleston, S. J. Goddard, Julius Heurlin, William N. Judd, Donald McKenzie.

Fruits—Fred A. Smith, Chairman; W. H. Golby, James Methven, E. B. Wilder.

Vegetables—William N. Craig, Chairman; Edward Parker, William C. Rust, John L. Smith.

Gardens—A. C. Burrage, Chairman; John S. Ames, George E. Barnard, C. W. Hoitt, R. M. Saltonstall, Charles Sander.

Library—C. S. Sargent, Chairman; E. B. Bane, N. T. Kidder.

Lectures and Publications—F. A. Wilson, Chairman; Thomas Allen, J. K. M. L. Farquhar, C. S. Sargent.

Children's Gardens—James Wheeler, Chairman; Dr. Harris Kennedy, Miss M. R. Case, Miss M. A. Rand, Miss Eleanor W. Allen, Miss Louisa Hunnewell.

The George Robert White Medal of Honor for 1920 has been awarded to George Forrest of England. Mr. Forrest through his several journeys in southwestern China has been a successful collector of a considerable number of desirable garden plants, especially rhododendrons, spiraeas, and cotton-easters, some of which are now growing in the Arnold Arboretum.

The Albert Cameron Burrage Gold Medal for the year 1920 for the one who has done the most for the cranberry industry has been awarded to H. J. Franklin of East Wareham, Massachusetts, on account of his paper on Cape Cod Cranberry Frosts.

THE TALK OF THE TRADE

I have noticed an increased interest in gladiolus for forcing purposes this year, and I can't see why this increase in planting is not justified. The gladiolus I believe has turned a good margin of profit to the growers who forced them the past few seasons. And the all-important point is to select those varieties that give a good percentage of bloom. Of course, together with this point we must not forget that well ripened bulbs are very necessary. A good plan is to spread the bulbs out in a warm, perfectly dry place, such as the boiler shed, and leave them there for a week or so before planting. This encourages a quick start and a somewhat earlier blooming season.

I have many times before advocated Primulinus Hybrids as one of the best sorts for profit. The blooms are not so large, but two to four blooms may be had from a bulb, and there is a good steady call for flowers of this type. I will mention a few of the other varieties which have been demonstrated good for forcing. Of course America is always well thought of. It forces readily, and the blooms are in demand, bringing pretty close to top notch prices. The variety Mrs. Watt is not so generally mentioned as a good forcing sort, but I find that those growers who have tried it out have averaged very well. In fact, in some cases it has produced a better percentage than even America. It finds

a ready sale, as its rich, American Beauty color takes well the flower stems are well set up. In length of stem it is medium, and nearly all of the flowers open at one time and are set well together.

In whites there are several, namely Chicago White, Augusta, Lily Lehman, Lily White and May. The latter I had not heard about until the past season, but it showed up very well and is one, I think, well worthy of attention.

Among the various shades of pink sorts I would mention Halley, Independence, Mrs. Francis King, Panama, Pink Beauty and Willy Wigman. Other varieties which have been tried out for forcing and found satisfactory are Klondike, clear yellow; Niagara, a little deeper yellow than the former; Delice, a very clear pink; and Glory

F. R. Pierson's Model Store at Tarrytown, N. Y.

of Holland, white shading to light pink.

Plantings of gladiolus at the present time would indicate a supply of blooms early in the spring fully up to the average, if not ahead of other seasons.

J. W. Minott & Co., of Portland, Me., have an exceptionally fine lot of Cyclamen plants in 6, 7 and 8-inch pots, particularly well flowered, and they are fortunate in having such a good supply for their store trade. In fact, there are several hundred plants which are to be wholesaled beyond the orders already booked. It is stock of good quality and is a credit to the Minott Co. I was also pleased to find their place in general in such good condition. Some of the carnation planting was made late, but a large part of the stock is heavy and carrying good crops, and there will be a steady cut from now right into the spring. Mr. Minott is very well pleased with White Delight. He has a bunch of it in very good condition, and it is evidently a sort which takes kindly to his growing conditions.

Carnation growers will be pleased to know that Dorner & Sons are putting out a new red carnation called Happy Day. It has all the ear marks of a good sort, an excellent bright red shade, clean grower, and is evidently one of the kind that will turn out not only good quality blooms but plenty of them, as it breaks away quickly, and as I have seen it several times during last winter it keeps busy all the time. S. J. Goddard, of Framingham, Mass., has a batch of it growing so that those in the east who are interested can go there and look it over.

Growing Callas in spots has been the general method for cut flower purposes, and not until I saw a house of Godfrey Callas at James Wheeler's place in Natick, Mass., had I seen them growing in solid beds or right on the ground. He has his Godfrey callas planted right into the soil in the ground, without any beds being prepared at all, and they have turned out a fine crop during last year, and evidently will do equally as well this year.

Quidnick Greenhouses, of Anthony, R. I., are growing a house of Calla Aethiopica, planted right into solid beds. This is also the second year with this method of culture, and it is a decided success. They are cutting heavily at present, with an excellent showing of buds coming along, and the blooms are of good size and bring top prices in the market.

Since writing the paragraph about John J. O'Brien's plan of having attractive plants along the sidewalk in front of his store on Beacon St., Boston, I have been interested to observe that the practice is being continued even in the winter months, and the evergreens standing outside the building add much to the general appearance of the store, and undoubtedly are a source of business. The more attractive flower stores can be made, the better the opportunity there is for increasing trade.

Perhaps so much attention was never given in the past to the beautification of retail stores as at the present time. Florists are beginning to learn that the general appearance of their premises is a big item in their success, and this fact is being stressed at the conventions. Of all the stores I have seen, though, none has impressed me more than that of F. R. Pierson, of Tarrytown, N. Y. Of course it is impossible for all florists to have such commodious or pretentious quarters, but to a certain extent they can approximate the air of refinement and restraint which makes this establishment unique among florists' shops.

I was interested to learn that the Oakes Greenhouse in Westfield, Mass., recently observed the fiftieth anniversary of its existence. This long established business is well known in the western part of the state, and is flourishing finely under the management of Mrs. Katie H. Cartter, the present owner, who is a daughter of William N. Oakes, who established the business in 1870. It is seldom that a store remains so long in one family, and it is pleasant to find that Mrs. Cartter is upholding the traditions of the business in showing all the enterprise of a modern florist.

NEW YORK FLORISTS' CLUB

The New York Florists' Club has elected the following officers: President, I. S. Hendrickson; vice-president, Roman J. Irwin; treasurer, W. C. Rickards; secretary, John Young; trustees, Joseph A. Manda, Anton Schulthesis and Percy B. Rigby.

Alfred Hunt, of Norwich, Ct., has sold his greenhouses to Carl O. Johnson. This is an old establishment, the business having been started by R. H. Goldsworthy about thirty years ago. Mr. Johnson, the new owner, has been employed in several large greenhouses, including A. N. Pierson's at Cromwell, Ct.

Men I Like to Meet

WILLIAM SIM

As a grower of novelties there are few who have made the reputation of William Sim. Not only in flowers but in vegetables has he made his mark. Early sweet corn, tomatoes and potatoes might be mentioned in particular as very successful crops with Mr. Sim, and his tomatoes under glass have been a decided success. In the past few years, however, he has handled no vegetables under glass.

There was a time when Mr. Sim was thought of first when anyone mentioned either single violets or sweet peas. The blooms of the sweet peas which came from his place and were shown at the various shows, particularly through the east, were eye-openers to many growers in their day, and no one can forget the strain of pansies which he worked out. His pansy blooms shown at the First National Flower Show in New York were an attraction to everyone. The last of his novelties was the Polyanthus. Mr. Sim selected and improved on this flower and brought it up to a high point of perfection.

Now, however, nothing is grown in his range of glass except carnations, and with the usual Sim success the houses are full from end to end with heavy plants, and cutting great crops, especially for this season of the year.

It is always a pleasure to call at Cliftondale and go through Mr. Sim's houses and talk with him, not only about the crops that may be there, but about anything connected with the

RAMBLING OBSERVATIONS OF A ROVING GARDENER

There have been many conflicting statements about the success with which the Christmas rose can be made to bloom at Christmas. There are times, though, when this flower can be found in full bloom at Christmas time, even in states farthest north, as is shown by a report made by Mary Earle Hardy in the *American Botanist*. Miss Hardy, who lives in Michigan, says that last Christmas day she dug away the snow and gathered an exquisite bunch of Christmas roses which were nestled among the thick evergreen leaves of the plants and the drifted leaves of the deciduous trees growing nearby. The temperature was only a little above zero, and after the flowers had been picked they were dropped into a pan of cold water as some of the stems were stiff from frost. Kept in a cool room the blossoms retained their loveliness for two weeks.

As Miss Hardy points out these flowers are not roses at all, but instead, belong to the widely related Buttercup family, and are scientifically

named *Helleborus niger*. They come to us from over the sea, being little mountain climbers and loving best the rugged and wooded defiles of the southern Alps and Apennines. Their blossoms are waxy white, lightly touched here and there with the faintest flush of pink. Their petals are scarcely observed, except by those who carefully study the construction of the flower, being exceedingly small and strangely twerked into tiny two-lipped alabastrons holding the faintest of perfumes. What we call the petals, are the five waxen sepals which give the flower a breadth of two to five inches when spread. When not expanded, these assume the shape of a most exquisite little cup.

The name *Helleborus niger* has reference to the black root of the plant; and with curious wonderment we wish we knew the why and how that so black a root bears so white a flower. After the flowers have passed their youthful grace and bridal beauty the waxen petal-like sepals, take on a shade of green, while their seeds slowly mature.

Apropos of what I wrote recently about the Formosan Conifers, the following from the pen of a writer in *The Gardener's Chronicle* is interesting:

"I was fortunate enough to see these wonderful trees in 1912, and described them in a short paper on the 'Forests of Formosa' in the October issue of the *Journal of Forestry*. I do not know whether Mr. Bean or Mr. Wilson is responsible for the name 'Formosan Redwood' which is given for the remarkable tree, *Taiwania cryptomerioides*, but if it implies any resemblance to the Californian Redwood it is not appropriate.

The excellent photograph of a young tree, taken, I presume, by Mr. Wilson, gives no idea of its appearance when mature, and the tree which I thought it resembled most nearly, is the Chilean *Araucaria*, which I have also seen in its native forest. The largest specimen that I measured stood in 1912 close to the post office at Arisan, and was beautifully photographed by Mr. Price, who, I hope, will soon publish the account of his botanical explorations in Formosa, which were interrupted by the war. This tree measured 190 ft. high by 24 ft. in girth, and it may well be that taller ones exist. But even if it attains 200 feet it would not be the tallest of the Old World Conifers, as I measured in Sikkim a

The Christmas Rose (*Helleborus niger*)

fallen tree of *Picea spinulosa*—better known as *P. morindoides*—which exceeded 220 feet.

"I believe that trees as tall as *P. Morinda* exist in the N. W. Himalaya. I very much fear that this wonderful tree will not prove hardy in Great Britain or in New England, as the climate of Arisan was in February, at the coldest season of the year, very mild compared with the winters here or in Japan."

The New York Botanical Garden is doing for the New York public in a lesser way what Mr. A. C. Burrage has been doing for flower lovers of Boston in displaying rare and interesting orchids. In one part of the greenhouses a large display of orchids has been gathered together, running through the long list of species. Among the flowers which have attracted special attention has been *Vanda Sanderiana*, from the Philippines, named for the horticultural firm of Sander. Another interesting flower, helmet shaped, is a Costa Rican orchid, pure yellow, with fine delicate veined markings. *Vanda coerulea*, the nearest approach to a blue orchid, is also shown. The display was so good and so unusual that the New York Times gives it a column description in one of its Sunday editions.

I am informed that Mr. E. H. Wilson, the famous plant scout of the Arnold Arboretum, is now in Australia, a recent letter having been received by Professor Sargent dated at Perth. Mr. Wilson reports beautiful weather, with flowers on every hand. He speaks of many interesting matters which have come to his attention, and apparently will have considerable good material for the Arboretum when he returns.

AMERICAN SEED TRADE ASSOCIATION

At the recent meeting of the Executive Committee of the American Seed Trade Association, it was decided to hold the next Convention at St. Louis, Wednesday, Thursday and Friday, June 22-23-24, 1921. The selection of hotel headquarters has been left to a committee on arrangements headed by Clifford Corneli. Those in attendance were Pres. Hastings, Secretary Kendel and Messrs. C. C. Massie, Kirby B. White, and Leonard Vaughan.

Norman C. Reed has been made manager of the Flower Shop at 68 Shenango St., Binghamton, N. Y. This establishment is owned by Stanley C. Barnes.

Little Talks on Advertising

LITTLE TALKS ON ADVERTISING

W. H. Englebach of Memphis hit the nail on the head when he said at a recent convention: "Keep something before the public at all times. Our customers, patrons, friends, prospective patrons, customers and friends, must not be given an opportunity to forget what we sell, because I feel we owe them the obligation to keep them informed."

This is the keynote of a successful advertising campaign. Intermittent advertising is better than no advertising at all, but by no means meets present-day business methods. It is the persistent advertiser who wins. The best medium is, of course, the newspaper. As Mr. Englebach said: Newspaper advertising excels all others. And if you will stop to consider you can easily understand what a short cut to countless thousands of people newspaper advertising is.

But newspaper advertising is not the only kind, as Mr. Englebach pointed out when he said: "I have also a hobby and in advertising my hobby is 'direct advertising.' And I will say, the timely use of mailing folders, cards, etc., sent out just previous to holidays or events, also bring a ready response in orders. You are all more or less familiar with the kind of advertising I mean. I mail this advertising to our customers only, as I have no prospect list, and as quickly as we win new customers I add them to my mailing list."

During the past two seasons we used

the service of the C. E. Falls Service Company for our direct mail advertising and with the good results I have aforementioned."

Finally there is window advertising, which is not to be overlooked, by any means. An example is to be found in the experience of Mangel, the Florist, 17 East Monroe street, Chicago. Mr. Mangel arranged a window with such success that it was given the following write-up in a newspaper, publicity of the best kind:

"Ask the small newsboy on the street to direct you to Mangel's and he will instantly reply, 'Oh, dat's the guy who's got all dem ducks,' and furnish you definite instructions how to get there. Ask the head waiter in one of the fine restaurants and he will tell you, 'Certainly, right next door to the Palmer House, on East Monroe street. You will know it by the ducks in the window.' Or inquire of the wife of a gold coast millionaire and she will exclaim, 'Oh, my dear, you re-a-l-l-y must go there. They have the sweetest ducks in the window. They are perfectly charming.'"

The Mangel windows are dressed two or three times a week and the huge unit is always filled with some seasonal flowers—peonies, dahlias, asters, chrysanthemums, roses or carnations. Sometimes the water in the front of the window has water lilies blooming in it, at other times branches of oak trees or foliage of some kind. The back of the window is built up with portions of tree bark, while water

Want a Good Safe Cheap?

Here is a chance for any florist to get a good safe for his records and valuables at a bargain. The Pennsylvania Horticultural Society has decided to use steel filing cases for its records, and will sell its two safes at a nominal figure.

No. 1—23 in. deep, 40 in. wide, 43 in. high. Marvin Old Style.

No. 2—26 in. deep, 26 in. wide, 40 in. high. New Style Marvin.

Expert safe men say the old style lock is really the best of the two; but both are good. Can be seen at room 606 Finance Bldg., Philadelphia, 10 A. M. to 4 P. M.

DAVID RUST, Sec'y.

from a miniature waterfall percolates through the stones and mossy banks to the brook itself, kept fresh and clear by a continual stream from a convenient pipe.

"A large slab in the center of the window, placed across the stones, with an artistic drapery of emerald or amethyst, or crimson velvet, bears bouquets of violets, or tearoses, or lilies of the valley; or graceful vases of roses, carnations or narcissus.

"Do the ducks sell flowers?

"Tell it to the world they do," says Mangel.

"As the Englishman who was buying a 'bookay' said recently, 'I really don't want these flowers tonight, but I couldn't resist seeing those jolly little beggahs again before I'm off for home, England? Yes, how did you know it?'"

DAHLIAS

FIELD GROWN ROOTS

FOR

SEEDSMEN, NURSERYMEN
and FLORISTS

The popularity of this flower is steadily on the increase—witness the tremendous success, last September, of the New York Dahlia Show, when the roof-garden of the Hotel Pennsylvania was crowded for three consecutive days.

From my stock of over one thousand varieties I am able to select for you a complete and well balanced list of both commercial and new varieties. I shall be pleased to prepare such a list upon request.

J. K. ALEXANDER, *The Dahlia King*

LARGEST DAHLIA GROWER IN THE WORLD

32 Central Street, EAST BRIDGEWATER, MASS.

George Watson's
Corner

"You in your small corner and me
in mine."

Sweet peas have suffered from the dull weather and the flowers have been so affected that a large proportion dropped from the plants before cutting. Some of the growers figure their losses for two weeks as running into the thousands. One claimed a direct loss of five thousand dollars, another placed his at two thousand, and so on according to the size of the place. There are some fine cuts of Premier Roses promised for the holidays, and the American Beauty growers say their crops are just right. Everything looks promising all along the line for a good Christmas trade.

James Brown, the Coateville florist, sent to the Pennock market on the 6th inst. a specimen of a twin flowered Calla which attracted considerable attention. The junior Brown says they are trying to outdo Burbank, and if this new creation makes a hit they will endeavor to perfect the process and grow them for the Philadelphia market. Brown senior we know well. He is a bit of a joker. Junior seems to be a son of his daddy all right. Twin Callas of the Siamese twin brand make good Barnum or movie stuff, and there are always ginks willing to gape.

Alfred M. Campbell is to be congratulated on the fine roses coming in from his Hatboro place. Among them are the best double white Killarney we have seen this season. His grower must be "some boy."

Steve Mortensen is another of "the boys" we are proud of these days. His crop of Premiers are worth going a long way to see.

Commodore Westcott had a birthday on the 16th. The boys of Ludlow street sent him a beautiful floral offering in roses and chrysanthemums, and there were innumerable telegrams and other mementos from all parts of the country, all of which made the old gentleman feel very good—so that he had to raise one arm high—taken from his good lady's medicine reserve—and drink to everybody in return, at high noon. Many happy returns, John.

The American Peony Society held its semi-annual executive session in Philadelphia, December 11th. The

FLORISTS' FLOWERS IN EUROPE

Blooms Plentiful and Cheap—Some
Peculiar Ways in Which They
Are Handled

Mr. Sidney Bayersdorfer of Philadelphia, who is very familiar with conditions across the water, gave the Tennessee State Convention a very interesting account of the situation as he found it on his most recent visits. He said:

"I arrived in London on August 3rd, 1919. The first thing that struck me as I was going up to the Savoy hotel was a florist shop. I looked in and found the shop selling hothouse fruit and baskets, made up of both fruit and

flowers. Going about London I found the same thing everywhere. Almost all of the good florists are handling fine fruits in connection with their flowers.

"From England I went to Holland. Holland has fairly modern flower shops, and they are using many baskets. Of course Holland has beautiful flowers.

"I got my passport into Germany, after a great deal of trouble. Being in the enemy's country I was rather worried. I reached Berlin at two o'clock in the morning, but could not sleep much, so arose early. The first thing I did was to visit the florists shops, although I thought that due to

PHILADELPHIA, PA.

the war, and on account of the lack of business, they would all be boarded up.

"My impression of the first flower shop was wonderful. The windows were full of flowers; one window was filled with floral wreaths for funerals. It is quite a custom in Europe to show the funeral wreaths in the shops. They do this all through France, Holland, Belgium and Germany. They always have natural designs in stock.

"In Europe the wreaths are not made on wire frames, but on sticks or hoops, and wound around to make either a crescent wreath, which is very gracefully made, or the entire wreath. Most funeral wreaths average from three to seven feet in diameter. They do not make the fancy things we make in this country; their main thing is wreaths. Europe caters to funeral work in preference to any other type of work.

"To get back to the first flower shop I saw in Germany. The window was filled with fine draperies, beads of amber and other fine texture. I went into this shop and saw the proprietor, who told me that during the entire war they did a wonderful business. His business has increased three times over what it was prior to the war, the reason being that the people had lots

of money, especially the working class, and not being able to spend it on food, as there was none to be had, spent it on flowers.

"The florist shop in Germany has improved considerably since I was there prior to the war. They have all the material and the flowers to make up most beautiful work, yet have not the artistic arrangements the florists in the United States have. I showed them all of our ideas; some took to them and some did not. I told them about the baskets used for funerals in this country. Some laughed, others took it seriously and are going to try it. This I told to the florist in France and all the other countries I visited.

"Tins are used very little in baskets. They make most baskets very flat, with short stemmed flowers. Flowers are put close and compact, with very little greens among them.

"On my second trip in May, 1920, I went to Weimer. Weimer was the center of the Socialist Party and is one of the oldest towns in Germany. There I went to see a man named Dorner, a carnation culturist. Mr. Dorner learned his business in America, from Dreer and other United States florists. This man did business all during the war, cultivating new ideas in carnations. The stems of some of the carnations I saw there were, without exaggeration, four feet high, and the flowers were in various combined colors, such as lavender and pink, yellow and lavender, etc.

"Mr. Dorner pinned a white carnation on me. It just came to me that it was Mother's Day. I told him about it, but he thought it could not be done in Germany. I said, 'It is done in America, so I do not see why you cannot do it here. It would be a big sale for your carnations.' He is going to try to start it.

"He showed me his greenhouse, which is the old-fashioned kind. In fact, in all Europe, there are no greenhouses like in America. He asked me to send him some nicotine, which is very scarce. There is very little of this in Europe.

"An interesting thing about Germany is that you find flowers in every house, poor or rich. They have window-boxes in the smallest alleys. I have gone into the houses of the poor working class and found plants and cut flowers around. This was encouraged during the entire war.

"During the war they encouraged giving birth to children, and the florists always had some novelties to send to the newborn boy member of the family. A girl was not important. One of the novelties I picked up had on it

in German: 'Another soldier for Hindenburg.' This man told me he sold over a thousand of these; and they were quite expensive.

"I happened to be in France on Decoration Day, when they were placing wreaths on the graves of the distinguished Americans. Also a great many Americans were sending their families wreaths. I tried to help a few of the florists make up these wreaths and found that they would not have them our way. They made them up on frames, in the manner I spoke of before. They were made of cedar, beech sprays and oak wound around big hoops, and at the bottom sprays of orchids, lilies, carnations and roses, making a wreath at least six feet in diameter, at \$25.00. Of course, the exchange is low in France, about one-third of its original value.

"Another thing they use in France, of which any of the boys that were over there can tell you, is beaded wreaths. Each florist carries an enormous stock of these beaded wreaths. They are made from glass beads, in various colors. I went out to the cemeteries and almost every grave had from one to two dozen wreaths on it. The bodies are buried above the ground in France.

"I went from there to the south of France, Toulon, where the bulbs come from, and found that the farmers down there have gotten together and are holding the price of bulbs way up, saying the Americans have plenty of money and can pay for them. It is a beautiful sight. Flowers from the south of France are shipped everywhere; England, Northern France, Belgium and Switzer-

land, for they grow in such abundance that they only need help to pick them. They are put in big hampers and sent to the market at so much a hamper.

"Summing up the entire conditions in Europe, I would say that although the floral business originated in Europe, today the United States are far superior in this trade."

GROWING MATERIAL FOR THE FLORIST TRADE

How the Nurseryman and the Florist May Work Together

The editor of the American Nurseryman thinks that the proper co-operation between the nursery and florists' trades has never been developed to the extent that would seem called for by their close connection, but says the fault seems to be rather on the side

of the nurserymen, as they are to a great extent the growers of the raw materials which the florist works up into a condition for the consuming public. He continues:

"There are many florists who also do a nursery business—in fact, try to cover the whole scope of Horticultural Art from making a funeral design or decorating for a society function, to laying out an estate, and perhaps in fewer instances the same may be said about the nurserymen.

"There is no reason why they should not if their organization is big enough to carry experts to compete with specialists in the various lines.

"But this is an age of specialists, and usually all the concentration and skill available is necessary to carry on one branch of the business successfully.

"With the shutting off of the foreign

supply of what might be termed the raw material in the way of plants for forcing, it opens up a big field that is in the province of the nursery grower. It remains to be seen if the nurserymen proper will force the florists' trade to grow its own material. While it is foolish to attempt to draw an arbitrary line between the florist and nurseryman, the fact remains there is a recognized province for each, due to the fact that the florist trade is largely one of greenhouses and stores, while the nursery trade is growing upon acreage.

"The nursery trade should plan to propagate all the plants the florists need, and bring them to the stage desired, which is usually 'ready to be forced.' It is only necessary to recall the large quantity of Rhododendrons, Azaleas, Deutzias, Roses and other hard wooded plants, that used to be imported to realize the immense demand for early spring blooming subjects the florist needs in his business. Unless it is available the florist trade will either grow them itself, or substitute bulbs, herbaceous and what is generally known as greenhouse plants for the winter demand for plants for interior decoration.

"There is no doubt the florist trade will develop its own growers of greenhouse plants, that were formerly imported. Its equipment is along the line necessary for the production of this class of plants, but for the propagation and material of woody plants the nurseryman is in the best position to give the florist what he needs.

"There are endless ways in which the florist trade could be catered to to the advantage of both trades. Evergreens for winter is one of them. Few nurseries make any special effort to give the florist trade all it needs in tubbed evergreens for porch decoration or small evergreens for window boxes, or cut evergreens for interior decoration, yet there are many beautiful subjects practically unknown to

C.R. BURR & COMPANY, Manchester, Conn.

the florist that could be grown in quantity for the purposes of cutting.

"There may be reasons why the Southern Smilax, Holly Galax leaves, Laurel, Ferns, Mahonia, etc., are gathered from the wild and shipped long distances in such quantities, but those reasons are not complimentary to the enterprise of the nursery trade, and this source may be permanent but it is very much like wasting natural resources.

"Then there is a big field in ornamental berried plants, the florist trade knows very little about, and it is up to the nurserymen to show them. One can almost imagine the sensation a big supply of *Celastrus scandens*, *Ilex verticillata*, deciduous *Euonymus*, would cause if it were available in quantity and in prime condition for the florist decorating trade."

CHICAGO FLORISTS' CLUB

At the last meeting of the Chicago Florists' Club the following new members were elected:

Albert Schmidt, grower, Melrose Park, Ill.; Wm. A. Hansen, wholesale florist, 169 North Wabash avenue; Herbert Hansen, wholesale florist, Charles W. Erne, wholesale florist, Walter Stoklos, wholesale florist, Jack Byers, wholesale florist, and Maurice Grossberg, supplies, all of 30 E. Randolph street; John Cook, superintendent Mt. Greenwood Cemetery Greenhouses, Morgan Park; Arthur B. Dietsch, greenhouse manufacturer, 2640 Scheffield avenue; James Sykora, grower, Batavia, Ill.; F. W. Kuhlman, grower, Maywood, Ill.; V. A. Kohout, grower, 3212 West 22nd street; C. E. Shreve, allied trades, 3260 W. 31st street; Leonard Engels, grower, 1249 Marianna avenue; John McNeely, wholesale florist, 174 N. Wabash avenue; Earl Poehlman, grower, Morton Grove, Ill.

It is interesting to state that the new rose American Legion exhibited by Poehlmann Bros. is a cross between Milady and Hadley. This rose was originated with Ed. Towill of Roslyn, Pa.

A rose exhibited by the same company is a yellow rose similar to Ward. It is as yet unnamed but for the present same is being called Phantom.

The election of officers for 1921 resulted as follows: President, Joseph Kohout; vice-president, A. T. Pyfer; treasurer, A. H. Schneider; secretary, F. Lautenschlager; trustee, August F. Poehlmann.

The Chicago Florist's Club in response to communication received from Secretary Young of the S. A. F. & O. H. recommends either of the following as State Vice-president for

Northern Illinois: Paul E. Weiss, Joseph Pollworth, James Morton.

By unanimous action it was decided that the Chicago Florists' Club request representation on the Board of Directors of the S. A. F. & O. H. in accordance with the By-laws of the National Society.

BOSTON FLORISTS ASSOCIATION

The Florists' Association of Boston has elected the following officers: President, Birket F. Letson; vice-president, Frank Gibbs; treasurer, F. E. Palmer; secretary, William Thurston; financial secretary, Frank Edgar; members of the executive committee for three years, Henry Penn and E. S. Gorney.

CHANGES AMONG GARDENERS

John Dervau has become gardener to L. M. Sockett at Louisville, Ky. Other changes are as follows:

Charles Swain becomes gardener to William Crawford, Bridgehampton, L. I.

Louis Kay is now gardener on the L. B. Price estate, Greenwich, Conn.

Edward Harding goes from William du Pont, Montpelier, Va., to the estate of F. W. Borchers, Elkton, Md.

Alexander Douglas is gardener on the Leroy Frost estate, Nyack, N. Y., succeeding William Allen.

William Allen has accepted the position of gardener on the Pratt estates, Glen Cove, L. I.

Robert Budd has been gardener to H. T. Bradner, Gates Mill, Ohio.

George Wood is the new gardener on the L. C. Ledyard estate, Syosset, L. I.

Irving Schofield is now gardener to D. S. Walton, East Orange, N. J.

Ewen MacKenzie has secured the position of gardener to Morton H. Meinhard, Port Chester, N. Y.

BRECK'S MUTUAL BENEFIT ASSOCIATION

The Mutual Benefit Association of Joseph Breck & Sons, Inc., Boston, has re-elected its old board of officers as follows: President, Alexander J. M. Joiner; vice-president, Frank S. Ferreira; treasurer, Henry L. Haynes; secretary, Miss Harriette L. Riley. Executive committee: Mrs. A. Coombes, Albert E. Werner, Miss H. C. Cushing, Selden L. Hatch, William F. Wilson. The reports of the secretary and treasurer show a marked increase in members and finances. Preliminary arrangements have been made for the annual outing in July.

L. A. Tuthill has purchased the Michael Fisher Greenhouse at Silver Head, N. Y., and will transfer it to his property at Creekside.

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, \$1.50; To Foreign Countries, \$2.00; To Canada, \$1.75.

It's good to find that there is no diminution of interest in the national flower show conducted by the S. A. F. At a recent meeting of the flower show committee in Cleveland the attendance was large, and no little enthusiasm was manifested by those present. Blue prints submitted to the committee show that there will be plenty of room in the new Cleveland Auditorium, which has been reserved for the dates of the show, March 25 to April 1.

We are certain that the committee acted wisely when it decided not to raise the rate for trade space above that of \$1.00 a foot which prevailed at Philadelphia. It is to be hoped that the committee will also maintain the admission price of 50 cents, as these shows are largely educational, and it is important to get as large an attendance as possible. The more people who can be made interested in flowers and taught to realize their value in making home and office brighter and more cheerful, the better off will florists be, for it is in this manner that their business is to be stimulated.

Apparently the new Cleveland Auditorium is nicely adapted for such a show, as it will be possible to give the trade exhibits a separate floor, where they will be segregated, as it were. An interesting arrangement, however, has been planned by which retail florists who care to make exhibits will be given space free of charge on the floor of the show proper. Of course it will be necessary to have considerable money to put this show over in good shape, and the secretary is to start at once with the work of raising a guarantee fund of \$20,000.00. Incidentally it was decided that if conditions warranted a 10 per cent dividend would be paid upon the amounts actually paid in.

It was an interesting letter that the United States tariff commission presented to the S. A. F. Committee on Tariff and Legislation the other day. It appears according to this letter that the commission is making a survey of nursery and greenhouse industries in anticipation of new tariff legislation. We think that the committee replied wisely to questions of the commission when it said that the trade wants a tariff that is clear and explicit in terms as well as fair and practicable in principle. Several ambiguities were pointed out which would help to prevent

confusion and misunderstanding. It was also pointed out that quarantine No. 37 of the Federal Horticultural Board is really understood by the trade as a tariff measure. Of course this is true, and if there is to be a tariff on plant importations, why not let it be one which will bring some revenue to the government.

One of our American extravagances is our profligacy in flinging flowers around; but we have not gone the limit in that direction yet. We read in a horticultural paper, published in Nottingham, England, the following interesting comment on our national peculiarities:

It is stated that \$45,000,000 are now spent on flowers every year in the U. S. A. This looks a big total, but it is also stated that this is less by five millions than is spent on the unpleasant habit of chewing gum, so there is evidently still room for advance.

We presume the "advance" is in the direction of more posies, and that will no doubt develop in the natural course of events. The youngsters all have a sweet tooth, and they do not need any encouragement along that line. We are probably no different in that direction from any other nation, and we are certainly not behind any of them in our appreciation of Queen Flora.

The total acreage planted to Sweet Peas for the production of seed this year is estimated by growers and dealers to be about 2,000 acres compared with 1,500 acres in 1919, about 550 acres of which were Spencers and 950 acres grandifloras, both including mixtures according to government report of September 25th. Because of a decreasing demand for grandifloras most of the acreage this year is of the Spencer type.

ADIEU

So much interest has been shown in the poem written by the late William J. Stewart, founder of HORTICULTURE, just before his death, that it is republished here. We trust this will answer the requests of Mr. Stewart's friends who have desired to possess copies of the sad but beautiful lines.

My friend, as I am going far away—
Ah, well, there is but little I can say.
My heart is full, the words that I would speak
Die on my lips, I am so strangely weak.

There's one thing I would ask before I go,
You'll grant it, dear, for old time's sake, I know:
'Tis only this, that midst all bright new scenes
And spite of all the space that intervenes,
That dreary length and breadth of surging sea.
You'll sometimes give a little thought to me.

Remember not the cruel words, unkind—
The sore mistakes I made blot from your mind,—
But think of me as loving friend and true;
Deal gently with me, as you used to do.

Forget, dear, every act that caused you pain,
Life is so short—we may not meet again;
Perchance this message brief may be the last
That I shall ever send you from the past.
Yet fate has willed it so by stern decree,
An ocean needs must roll 'tween you and me.

Farewell, with trembling fingers now I write
This sad, sad word, with tear-bedimmed sight;
Think of me, dear, as loving friend and true,
Remember me for old time's sake—adieu!

Flowers Under Glass

A Winter Hint

If you use houses of the three-quarter type,—and all florists cannot have modern houses,—be sure that the backs are good. Oftentimes you can keep your houses very much warmer by applying a layer of heavy roofing paper. Have plenty of laps at the joints, and get the paper as smooth as possible so that it will not rub off when a wind storm comes. If there are any open spaces in the back it will be a good plan to cover it first with roofing paper, then with several thickness of newspapers and roofing paper again on the outside.

Prevent Steam Leaks

Leaks from steam are oftentimes costly and annoying. If you have to fill the boilers often you can be sure that there is a leak somewhere. Make sure that the valves are all well packed, and repair all breaks in the pipes as soon as you find them. A surprisingly large amount of steam will escape through one poorly packed valve, and where there are many such valves the loss is sure to be considerable. Use asbestos rope if you want to be sure that they will stay packed as they should. Some growers make a point of packing their flange unions with tar paper, which makes a very good substitute for rubber. In some cases the paper seems to work better than rubber, and of course, is cheaper. Paper gets soft, though, and the tar may ooze out. Moreover, if the union is not kept tightened the paper may blow out. Two thickness of one-ply

paper, or one thickness of 2—or 3-ply work well. Tighten the flanges after the steam has been turned on, and continue to do so for several days. After that they will give you no more trouble.

JAMES KELWAY HONORED

The many friends in this country of Mr. James Kelway, of Kelway & Sons, Langport, England, will be interested to learn that he has been appointed a Justice of the Peace for the County of Somersetshire. Mr. Kelway is a member of the Langport Rural District Council, and chairman of the Highway Committee, also a member of the Grand Council of British Industries and of the Wholesale Seed Growers' Committee of the Chamber of Horticulture, and therefore is a very busy man. Mr. William Kelway, the senior partner in the firm, is also a Justice of the Peace, as well as counsellor for the County of Somerset. The result is that father and son will be fellow magistrates in the same petty sessions, an interesting coincidence and a tribute to the high standing of the Kelway family.

TULIP-RAISING IN STATE OF WASHINGTON

Bellingham, Wash.—This town has undergone its first tulip bulb planting season, having put in for next spring's blooming something like 100,000 tulip bulbs that were shipped from Holland. The federal government's bulb experiment farm here has demonstrated the fitness of the soil for tulips and other bulb flowers, and as a result some of the big shipments went to men starting bulb farms and some went to private persons to beautify their lawns and gardens. The country adjacent to Bellingham, along Puget Sound, also has bought and planted many bulbs. The bulbs were purchased through and distributed by the Bellingham Community Service.

NEW ENGLAND SEED TRADE ASSOCIATION

CHOICE BEAUTIES, ORCHIDS, VALLEY, ROSES
and all Seasonable Varieties of Cut Flowers

HAMAMELIS JAPONICA ARBOREA

From my study window I am looking at a Hamamelis, three tall shoots of which are covered with yellow blossoms, while the rest of the bush shows the buds which we hope will blossom as usual in March when the snow is on the ground. The blossoms now on the bush are all yellow without the long curled, dark reddish brown filaments which in the spring blossoming add so much to its decorative effect. Is the bush becoming Americanized and blooming at the same time as our native variety, or is this blossoming the result of our warm October?

For the frost has not yet taken the nasturtiums, larkspurs, dahlias, an-chusas, mignonetti roses or verbena from the garden.

Some tall sunflowers sent us by the Bureau of Plant Industry in Washington from Arizona have just come into blossom, and our hardy chrysanthemums are in the perfection of bloom. Most of the perennial asters have gone, but the Tartarian hold their blossoms high in air, and the toad-lilies are showing their speckled white flower. This year the garden flowers have bloomed and fallen from their stems before jack frost has caught them.

M. R. CASE.

CARNATIONS IN LANCASTER
COUNTY

On Thursday, Dec. 16th, five of the faithful took the car for a trip to Strasburg. Stopping at Amos Rohrer's we found five others who had made the trip by machine.

All of the Strasburg growers are carnation men. At Mr. Rohrer's we found a fine bench of White Wonder, another of Matchless, good but not quite up to the mark. A bench of

Belle of Washburn was producing fine flowers but not enough of them to make it a paying winter proposition. Mr. Rohrer considers it gives returns enough taking the whole season through to make it a good one to grow. Mrs. C. W. Ward is the main crop of the place and was in fine condition. On the side beds he grows a variety of flowers and plants for local consumption and finds it a good proposition.

Leaving Rohrer's the ten of us piled into one machine and ran on to J. Wade Galey's. Mr. Galey met us with a rather disappointed look on his face but as we began to tumble out of the machine one after the other it turned to a look of wonder and surprise and the comedy of the situation brought him back to his genial self. Here we found as always carnations in their prime and while the continued cloudy weather had interfered somewhat with production he was cutting what most growers would consider a fine crop. Mr. Galey swears by Beacon for a red and has good reason to do so—practically no seconds and more flowers per plant than any other known variety. The star spot of his place was a small section of a bench planted to Laddie, the blooms were as good as any shown at the American Carnation Society exhibitions and the growth all that could be asked of a carnation. The production was a little below par but the quality more than made up for that.
